KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of your investment may fall as well as rise and you may get back less than you originally invested.

The Sub-Fund may have a higher volatility to its NAV due to its investment policy when compared to sub-funds investing in global markets, with broader investment policies and/or are a less volatile asset class.

Refer to “Risk Descriptions” and “Sub-Fund Descriptions – Global Natural Resources Fund” of the Prospectus for further information on risks and other associated risks of the product.

Market and Credit Risks

YOU ARE EXPOSED TO MARKET RISKS

Concentration – When a Sub-Fund invests in a limited number of securities, issuers, industries, sectors or within a limited geographical area, it is likely to be more volatile and risky as its performance will be more strongly affected by political, economic, environmental or market conditions within that area or economic sector.

Commodities – The value of securities in which the Sub-Fund invests may be influenced by movements in commodity prices which are often disproportionately affected by political, economic, weather and terrorist-related events and therefore can be very volatile.

Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency, greater financial risks, higher volatility and lower liquidity than developed markets.

Equities – The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions sometimes rapidly or unpredictably.

Stocks of smaller companies may be less liquid, more volatile and tend to carry greater financial risk than stocks of larger companies.

UCITS, UCIs and ETFs – Investment decisions in respect of the underlying funds are made independently of the Sub-Fund, therefore there can be no assurance that effective diversification of the Sub-Fund’s exposure will always be achieved. The price and movement of an ETF and/or closed-end fund designed to track an index may not track the underlying index and may result in a loss.

YOU ARE EXPOSED TO CURRENCY RISKS

Currency – Movements in currency exchange rates can adversely affect the return of your investment. Investing in a share class not denominated in SGD will expose you to additional currency risks.

Hedging – Any measures taken to offset specific risks could work imperfectly. Hedging may be used to mitigate currency, duration, market or credit risk. Hedging involves costs, which reduce investment performance.

Liquidity Risks

The Sub-Fund is not listed and you can redeem only on a Singapore Dealing Day.

If the total requests for redemptions and switches out of the Sub-Fund on any Valuation Day exceeds 10% of the total value of Shares in issue of the Sub-Fund, the Management Company reserves the right to defer any requests in excess of 10% until the next Valuation Day. On the next Valuation Day(s), deferred requests will be dealt with in priority to later requests.

Product Specific Risks

YOU ARE EXPOSED TO DERIVATIVES RISKS

The Sub-Fund may, within its prescribed limits, invest in derivatives for hedging and Efficient Portfolio Management purposes.

The value of derivatives can be volatile because a small movement in the value of the underlying asset can cause a large movement in the value of the derivative, resulting in losses in excess of the amount invested by the Sub-Fund.

YOU ARE EXPOSED TO SECURITIES LENDING RISKS

The use of securities lending exposes the Sub-Fund to counterparty risk and liquidity risk.

WHAT ARE THE FEES AND CHARGES OF THIS INVESTMENT?

Payable directly by you – You will need to pay the following fees and charges as a percentage of your gross investment sum:
