KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of the product and its dividends or coupons (if any) may rise or fall. These risk factors may cause you to lose some or all of your investment:

Refer to “Risks” of the Prospectus for further information on risks of the product.

Market and Credit Risks

- **You are exposed to equity risks.** The Fund may invest in the equity underlying fund and will be subject to risks such as fluctuations in market prices.
- **You are exposed to interest rate and credit risks.** The Fund may invest in the bond underlying funds which are subject to interest rate fluctuations and credit risks, such as risk of default by issuers.
- **You are exposed to currency risks.** The underlying funds’ investments may be denominated in currencies that differ from the currency of the Fund, and accordingly, fluctuations in the exchange rates of these foreign currencies may affect the value of your units.
- **You are exposed to counterparty risks.** The Fund and its underlying funds will be exposed to the credit risk on counterparties with which it trades and any default by such a counterparty could result in substantial losses to the underlying fund and, in turn, the value of your units.

Liquidity Risks

- **The Fund is not listed and you can realise your units only on Business Days.** There is no ready secondary market for the Fund. All realisation requests should be submitted in the manner set out in the Prospectus.
- **You are exposed to liquidity risks of the underlying funds’ investments and your realisation request may be deferred or suspended.** The Fund may have investments which have high liquidity risks (for example, low trading volumes) and may incur substantial losses if it is unable to sell these investments at opportune times or prices. Under certain circumstances (not limited to the liquidity of the underlying investments in the underlying funds and the Fund) as detailed in the Prospectus, your realisation request may be deferred or suspended.

Product-Specific Risks

- **You are exposed to emerging markets risks.** The underlying equity fund invests in emerging markets which generally carry greater political, legal, tax and regulatory risks than more developed markets.
- **You are exposed to derivatives risks.** The Fund and/or the underlying funds may use derivative instruments for efficient portfolio management and/or hedging purposes. Derivatives involve risks different from, and, in some cases, greater than, the risks presented by more traditional securities investments. Some of the risks associated with derivatives are market risk, management risk, credit risk, liquidity risk, operational risk and leverage risk.

- **You are exposed to risk of investing in China A-shares through China-Hong Kong Stock Connect Programmes.** The equity underlying fund may invest in China A-Shares through the China-Hong Kong Stock Connect Programmes which are subject to regulatory change, quota limitations and also operational constraints which may result in increased counterparty risk.
