Risk Statistics Definitions

Standard Deviation :Measures the risk or volatility of an investment's return over a particular time period; the greater the number, the greater the risk.

Beta :Measures the sensitivity of the fund to the movements of its benchmark.

Risk Adjusted Alpha :Measures the difference between a fund's actual returns and its expected performance, given its level of risk as measured by beta.

Sharpe Ratio :A risk-adjusted measure, calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance.

Investment Risks

The fund does not offer any capital guarantee or protection and you may not get back the amount invested.

Investment in company shares: The fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This fund invests primarily in Asia, which means that it is more sensitive to local economic, market, political or regulatory events in Asia, and will be more affected by these events than other funds that invest in a broader range of regions.

Emerging markets investment: The fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Real Estate Investment Trusts: Investment in REITs poses similar risks as investing directly in real estate, including changing values, tax rules and other laws. The value of investments in REITs and the level of cash flow generated for distributions to investors may be affected by defaults by borrowers and tenants. The value of US REITs may be affected if the REIT fails to qualify for preferential treatment under US tax rules and securities laws.

Australian trusts: Infrastructure trusts finance, construct, own, operate and maintain different infrastructure projects, such as roads, bridges and railways. Utility trusts finance, construct, own, operate and maintain different utility projects, such as water systems and telecommunication projects. Investment in Australian Trusts may fluctuate in value resulting from issues relating to an individual trust or its management, its industry, general and local economic conditions, changes in tax rules or other laws affecting the investments, investor sentiment and fluctuations in interest rates.

Investment in China: The fund invests in China and is subject to the risk of significant change in political, social or economic policy in China, which may negatively affect the value of such investments.

Concentrated fund: The fund invests in fewer companies than other funds which invest in shares usually do. This means that the fund does not spread its risk as widely as other funds and will therefore be affected more if an individual company has significant losses.

Sustainability: The fund's integration of sustainability risks in the investment decision process may have the effect of excluding profitable investments from the investment universe of the fund and may also cause the fund to sell investments that will continue to perform well. A sustainability risk could materialise due to an environmental, social or governance event or condition which may impact the fund's investments and negatively affect the returns of the fund.

Fund currency: Changes in exchange rates between the currencies of investments held by the fund and the fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

[^] The charges are the fees the fund charges to investors to cover the costs of running the Fund. Additional costs, including transaction fees, will also be incurred. These costs are paid out by the Fund, which will impact on the overall return of the Fund. Fund charges will be incurred in multiple currencies, meaning that payments may increase or decrease as a result of currency exchange fluctuations.

Important Information

This fund meets the requirements under Article 8 of the EU Sustainable Finance Disclosure Regulation (SFDR); the fund has binding commitments in its investment policy to promote environmental and/or social characteristics and any companies in which it invests should follow good governance practices.

The Fund may invest in certain types of derivatives for investment purposes and efficient portfolio management purposes. Due to the investment policies of the Fund, the Fund may have a particularly volatile performance. Please refer to the prospectus for more information. Distributing Plus share classes may pay dividend out of capital. The payment of dividends out of capital effectively amounts to a return or withdrawal of an investor's original capital investment or of capital gains attributable to that original investment. Such distribution will result in a corresponding immediate decrease in the Net Asset Value of these share classes.

The Fund is a sub-fund of Franklin Templeton Global Funds plc ("FTGF"), an open-ended umbrella investment company constituted in Ireland. These securities do not represent all of the securities purchased, sold or recommended for clients, and the reader should not assume that investment in the securities listed was or will be profitable. Holdings are subject to change. The portfolio manager for the Fund reserves the right to withhold release of information with respect to holdings that would otherwise be included in the top 10 holdings list.
