INVESTMENT STRATEGY	
<ul style="list-style-type: none"> The Fund aims to outperform the Thailand SET before charges. The benchmark is also used as a reference point for portfolio construction and as a basis for setting risk constraints. The Fund is actively managed. The Fund invests in equities and equity related securities of companies or institutions domiciled in, operating primarily from, or deriving significant revenue from, Thailand. The Fund may also invest in other Authorised Investments, including but not limited to funds (including those managed by abrdn) and money-market instruments which invest in securities of companies or institutions domiciled in, operating principally from, or deriving significant revenue from, Thailand, and cash. The management team use their discretion (active management) to maintain a diverse asset mix at country, sector and stock level. Their primary focus is on stock selection using research techniques to select individual holdings. The research process is focused on finding high quality companies at attractive valuations that can be held for the long term. In order to achieve its objective, the Fund will take positions whose weightings diverge from the benchmark or invest in securities which are not included in the benchmark. The investments of the Fund may deviate significantly from the components of and their respective weightings in the benchmark. Due to the active nature of the management process, the Fund's performance profile may deviate significantly from that of the benchmark over the longer term. The Fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "efficient portfolio management"). Derivative usage in the Fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the Fund so that in these instances, cash can be invested while maintaining the Fund's existing allocations to company shares. 	<p>Refer to "Investment Objectives and Focus of the Sub-Funds" and "Investment strategy/policy" in Sections 9 and 11 of the Prospectus for further information on the investment strategy of the Fund.</p>

KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? <p>The value of the Fund may rise or fall. You may lose some or all of your investment depending on the performance of the underlying securities. Factors that may affect the performance of these securities include, without limitation, market risks, fluctuations in interest rates and foreign exchange rates, political instability, exchange controls, changes in taxation and foreign investment policies. Some of the key risks associated with the Fund are described below.</p>	<p>Refer to "Risks" in Section 15, "Liquidity Risk Management" in Section 21 of the Prospectus for further information on risks of the product.</p>

Market Risks							
<p>You are exposed to market risk. Prices of the securities owned by the Fund may rise or fall in response to changes in economic conditions, political conditions, interest rates, and market sentiment. These may cause the price of units of the Fund to go up or down.</p>							
Liquidity Risks							
<p>You are exposed to liquidity risk. The securities that the Fund owns may at times lack liquidity thereby affecting their value or ease of disposal. The manager may, subject to the trust deed, limit the total number of units which unit holders may dispose if the total number of units to be disposed on any dealing day exceeds 10%.</p>							
Product-Specific Risks							
<p>You are exposed to currency risk. The assets and income of the Fund will be substantially denominated in currencies other than the Singapore dollar. Currency fluctuations between foreign currencies and the Singapore dollar may affect the income and valuation of the assets of the Fund in ways unrelated to business performance.</p> <p>You are exposed to regulatory risk. The investment objectives and parameters of the Fund are restricted by legislative and regulatory guidelines. There may be a risk that legislative or regulatory changes may make it less likely for the Fund to achieve its objectives.</p> <p>You are exposed to emerging markets risk. Exposure to emerging markets increases potential volatility in your portfolio as the legal, judicial and regulatory infrastructure in emerging markets is still developing and this may create uncertainty for investors.</p> <p>You are exposed to single country risk. The Fund invests in a single country market, making it more concentrated and potentially more volatile than if it invested across regional or global markets.</p> <p>You may be exposed to derivatives risk. The Fund may use financial derivatives instruments for the purposes of hedging and/or efficient portfolio management.</p>
