

## HSBC Global Investment Funds

# GLOBAL EMERGING MARKETS BOND

Monthly report 29 February 2024 | Share class AM2

### Investment objective

The Fund aims to provide long term capital growth and income by investing in a portfolio of emerging market bonds.

### Investment strategy

The Fund is actively managed. In normal market conditions, the Fund will mostly invest its assets in investment grade and non-investment grade bonds issued by governments, government-related entities, supranational entities and companies based in emerging markets. The Fund may invest up to 30% of its assets in securities issued by a single government issuer with a non-investment grade credit rating. The Fund may invest up to 10% of its assets in onshore Chinese bonds which are issued within the People's Republic of China and traded on the China Interbank Bond Market. The Fund may invest up to 10% in convertible bonds. The Fund may also invest up to 10% of its assets in contingent convertible securities. The Fund may invest up to 10% of its assets in total return swaps and up to 10% in other funds. The Fund's primary currency exposure is to US dollars. See the Prospectus for a full description of the investment objectives.

### Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

### Share Class Details

#### Key metrics

NAV per Share	<b>USD 14.35</b>
Performance 1 month	<b>1.08%</b>
Yield to maturity	<b>11.75%</b>

## Monthly performance commentary

### Market review

EMD assets were mixed over the month as US growth and inflation surprised to the upside. Hard currency returns were able to continue their positive momentum as spreads tightened, while local bonds were negative given the stronger dollar. EMFX was able to outperform USD given the high carry of the asset class. Performance for February was largely driven by the stronger-than-expected data coming from the US, which led to higher rates and tighter spreads. Emerging market spreads continued to be resilient given the supportive macro backdrop, despite another wave of new issuance and high core rates. Yields in local markets pushed higher with USTs as volatility in rates was brought on by stronger data which then stabilized in the later part of the month as US retail sales came in weaker. In addition, the stronger data led to a strengthening of the dollar which also put pressure on EM local debt. EM central banks remain mixed, with additional countries having signaled willingness to diverge from the Fed. On a technical standpoint, net new issuance in February remained positive for both hard currency and corporates, with a combined \$17bn in new issues. Lastly, flows into EMD remained negative, with hard currency retail funds remaining the bulk of the outflows.

### Performance

EM hard currency assets posted positive returns in February as spreads grinded tighter following global macro/geopolitical developments which have been supportive. The fund outperformed the benchmark during the month. The outperformance experienced over the month was mainly driven by asset allocation. The overweight to high yield credits relative to an underweight to tight investment grade credits was a main contributor to relative returns. The overweight position to Egypt added to relative returns as the market priced out liquidity risks due to expectations of more support from the IMF and inflows from a FDI deal with the UAE. The overweight positions to high yield credits such as Ecuador and Argentina added to relative returns. The structural overweight to Latam investment grade vs an underweight to Asian investment grade benefitted relative performance as tight Asia credits lagged the investment universe. Lastly, security selection in Brazilian corporates and Peruvian quasi-sovereigns added to relative returns over the month. In terms of detractors, the underweight to spread duration hurt relative returns as a supporting macro backdrop allowed for spread compression. The overweight to Ivory Coast hurt relative returns as the country lagged the broader universe as they brought new issuance to market. In addition, the overweight to El Salvador hurt relative returns as the country underperformed the broader universe based on negative headlines. Lastly, security selection in Indonesia hurt relative returns.

### Positioning

We have slightly increased the underweight to spread duration and remain neutral duration looking for opportunities to add back exposure to spreads into any widening. We remain active in new issues, looking to take advantage of new issue concessions to generate incremental performance for the fund. We are potentially looking to increase off benchmark exposure to local markets to take advantage of relative value opportunities.

### Outlook

We believe the backup in rates year to date provides an interesting entry point for Emerging Markets Debt in 2024. Carry remains very attractive despite the compression in spreads, and as a long duration asset class EMD is poised to benefit in an outsized way from Federal Reserve policy easing in coming quarters. Our portfolios maintain conviction in long local rates views as emerging market economies have seen rapid disinflation and their central banks have largely been well ahead of the Fed in normalizing policy. Countries like Brazil, Indonesia, Mexico, Peru, and South Africa are likely to see local bond yields drop significantly in 2024 as rate cuts continue around the world. The weakening in EM currencies as US rates have edged up recently is likely to reverse in coming months as interest rates inevitably come down. We find value in a number of EM currencies such as Chile, Hungary, India, and Malaysia, and we anticipate something on the order of a 7% EM FX return at the portfolio level for the remainder of the year. Although EM credit spreads optically appear at the richer end of historical valuations, we acknowledge that high yield spreads tend to remain rich during periods of financial conditions easing such as we are in now. Spreads are also benefitting from fundamental factors as growth across EM regions is improving even as it slows in developed economies, and country ratings upgrades after years of downward momentum mark a long-term inflection point and should spell markedly lower default rates than in US or European credit markets over the next year or two. The period between the Fed's last rate hike and the first rate cut tends to be the sweet spot for the EMD asset class historically, when improving liquidity in markets leads to suppressed volatility and euphoric returns. This is in line with asset class returns at similar past cycle inflection points (1999, 2003, 2009, 2012, 2019) and is often the environment in which bonds outperform equities.

Risk Disclosure

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Investment involves risk. Past performance figures shown are not indicative of future performance. Investors should read the prospectus (including the risk warnings) and the product highlights sheets, before investing. Daily price change percentage is based on bid-bid price.

Index Disclaimer

Information has been obtained from sources believed to be reliable but J.P. Morgan does not warrant its completeness or accuracy. The Index is used with permission. Benchmark disclosure

The Investment Advisor will use its discretion to invest in securities not included in the reference benchmark based on active investment management strategies and specific investment opportunities. It is foreseen that a significant percentage of the Fund's investments will be components of the reference benchmark. However, their weightings may deviate materially from those of the reference benchmark. The deviation of the Fund's performance relative to the benchmark is monitored, but not constrained, to a defined range.

Supplemental information sheet

Share class	Share Class Base Currency	Distribution Frequency	Dividend ex-date	Last Paid Dividend	Annualised Yield based on ex- dividend date
AC	USD	--	--	--	--
AD	USD	Annually	31 May 2023	0.860113	4.30%
AM2	USD	Monthly	29 February 2024	0.096989	8.42%
AM3HAUD	AUD	Monthly	29 February 2024	0.028613	7.06%
AM3HEUR	EUR	Monthly	29 February 2024	0.026594	6.70%
AM3HSGD	SGD	Monthly	29 February 2024	0.025861	6.33%
PD	USD	Annually	31 May 2023	0.595802	4.57%

The above table cites the last dividend paid within the last 12 months only.  
Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may comprise of distributed income, capital, or both.  
The calculation method of annualised yield prior to August 2019 is the simple yield calculation: (dividend amount / NAV per share or units as of ex-dividend date) x n; The calculation method of annualised yield from August 2019 is the compound yield calculation:  $((1 + (\text{dividend amount} / \text{ex-dividend NAV}))^n) - 1$ , n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12. The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.  
Investors and potential investors should refer to the details on dividend distributions of the Fund, which are available on HSBC Asset Management (Singapore) Limited website.

Different classes may have different performances, dividend yields and expense ratios. For hedged classes, the effects of hedging will be reflected in the net asset values of such classes. Expenses arising from hedging transactions may be significant and will be borne by the relevant hedged classes. Hedged class performs the required hedging on a best efforts basis.
