In aiming to align the Portfolio with a net-zero goal, the Manager will promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions¹. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, Manager engaged with companies with

¹ Scope 1 emissions: are direct emissions from a company's owned or controlled sources (such as emissions created directly by the company's business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company's value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 3.0	ES: A-D G: 1-4	99%
Third-Party Data	7.9	0-10	

With regards to the NB ESG Quotient rating, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio’s aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio’s promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“CVaR”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security’s or portfolio’s market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 5.7% in the valuation of assets under assessment. The Reference

Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 99% and this is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Portfolio did not invest in companies that derived more than 5% of their revenue from fur and specialty leather manufacturers, or military contractors. The Portfolio also excluded companies from the investment universe that were involved in controversial activities and behaviour, such as gambling, alcohol and nuclear power. In addition, the Portfolio excluded companies involved in dictatorial regimes/ high ESG controversies; companies that exhibited very poor behaviours in terms of environmental pollution; human rights' issues or governance controversies; and companies that were not transparent on ESG or score very poorly on ESG metrics overall.

When applying ESG exclusions to the Portfolio, the Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the

entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.5	7.9	100%
2023 reference period	ES: B G: 3.0	7.9	99%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged.

Year-on-year the NB ESG Quotient G rating has moved due to changes associated with companies held and trading activity within the Portfolio.

Year-on-year, the third-party data rating has remained unchanged.

2. CVaR

	CVaR	Coverage
2022 reference period	-6.2%	99%
2023 reference period	-5.7%	99%

Year-on-year, the CVaR projected loss has improved. This is due to improvements in individual companies held in the Portfolio and due to trading activity.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Manager then proceeded to measure the companies' environmental or social economic contribution.

The Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager took into account the principal adverse impacts indicators (the "**PAIs**") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises</p> <p>PAI 12 - Unadjusted gender pay gap</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>

Consideration of the PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager also considered violations of minimum safeguards. The Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's assessment of companies) throughout the Reference Period.

The Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “*How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*” above.
2. The Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector

<i>Social and employee matters</i>	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>
------------------------------------	--

Consideration of the Product Level PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager has used the EU statistical classification of economic activities ("**NACE**") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 – 31 December 2023

Largest investments	Sector	% Assets	Country
ASML HOLDING NV	C - Manufacturing	5.7%	Netherlands
NESTLE SA	C - Manufacturing	5.5%	Switzerland
3I GROUP PLC	K - Financial and insurance activities	5.2%	United Kingdom
SCHNEIDER ELECTRIC	C - Manufacturing	4.6%	United States
LONDON STOCK EXCHANGE GROUP PLC	K - Financial and insurance activities	4.4%	United Kingdom
PARTNERS GROUP HOLDING AG	K - Financial and insurance activities	4.2%	Switzerland
EURONEXT NV	K - Financial and insurance activities	4.0%	Netherlands
ASSA ABLOY CLASS B	N - Administrative and support service activities	3.8%	Sweden
LOREAL SA	C - Manufacturing	3.7%	France
STRAUMANN HOLDING AG	C - Manufacturing	3.7%	Switzerland
KERING SA	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	3.6%	France
ATLAS COPCO CLASS A	C - Manufacturing	3.6%	Sweden
BAKKAFROST	A - Agriculture, Forestry and Fishing	3.3%	Faroe Islands
ADYEN NV	J - Information and Communication	3.2%	Netherlands
SCOUT24 N	J - Information and Communication	3.0%	Germany

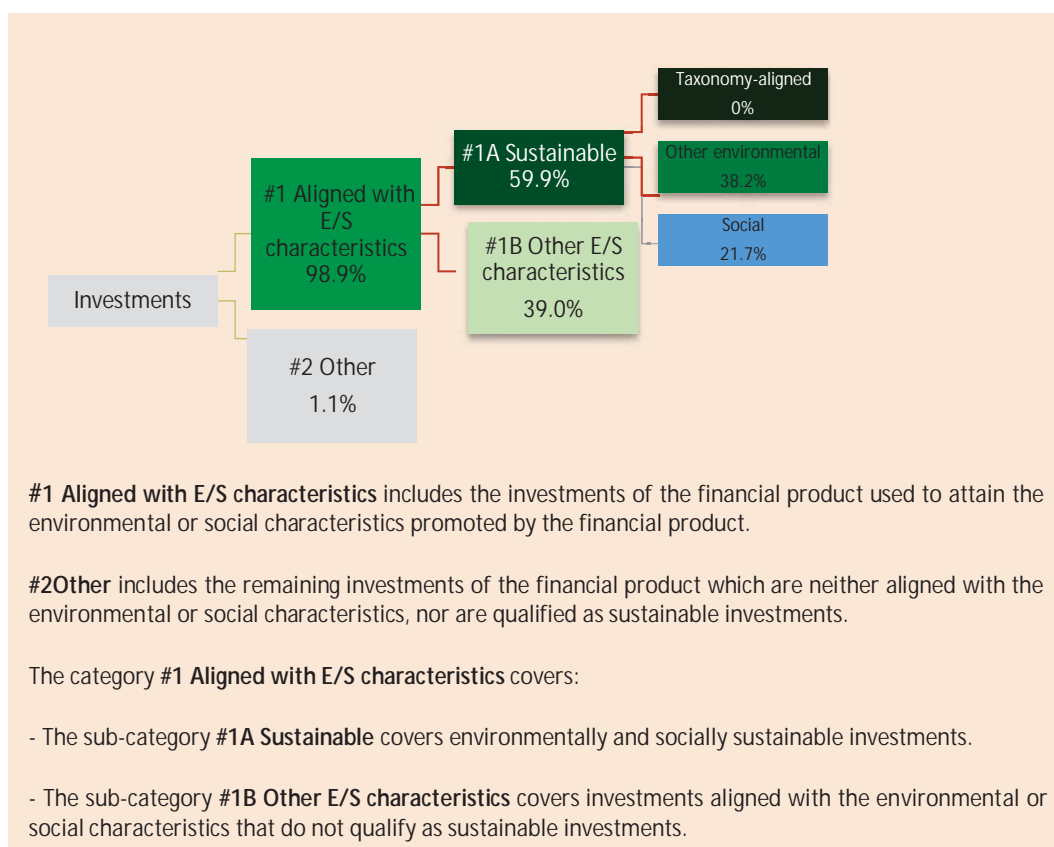

What was the proportion of sustainability-related investments?

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 98.9% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio commits to holding at least 50% sustainable investments. During the Reference Period, the Portfolio held 59.9% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 1.1% "Other" investments.

Asset allocation describes the share of investments in specific assets.

The Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
A - Agriculture, forestry and fishing	3.3%
C - Manufacturing	51.0%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	7.7%
J - Information and communication	13.4%
K - Financial and insurance activities	18.2%

M - Professional, scientific, and technical activities

2.5%

N - Administrative and support service activities

3.9%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?

☐ Yes:

In fossil gas

In nuclear energy

No

² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 38.2% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Portfolio held 21.7% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Bond Fund (the “Portfolio”)

Legal entity identifier: 549300RDJHEJZZ6XVX05

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager and Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	66	1-100	67%
Third-Party Data	6.6	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends. With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 1.6% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Manager and the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Manager and the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 19% and this coverage is an average of the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager and the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Portfolio also excluded corporate debt issuers in Emerging Market Countries that were involved in the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual disclosure template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-party Rating	Data	Combined Coverage
Range	1-100	0-10		0-100%
2022 reference period	68	6.5		77%
2023 reference period	66	6.6		67%

Year-on-year, the NB ESG Quotient rating has declined and the third-party data rating has improved. This may be due to an improvement in individual issuers according to the third-party data provider or due to differences in the issuer's third-party rating by the provider.

Year-on-year, the combined coverage of the NB ESG Quotient and the third-party rating has declined. The ESG analysis is performed internally, with the support of third-party data, and is not outsourced. The Manager and the Sub-Investment Manager makes assessments on these ESG characteristics on a continuous basis. For a short period of time, at the point of investment, an issuer may not be assigned an NB ESG Quotient rating. The Manager and the Sub-Investment Manager have periodic engagements with third-party ESG data vendors to discuss issues such as data coverage and will evaluate options to help resolve data gaps. Subscription to multiple third-party ESG data vendors enables the Manager and the Sub-Investment Manager to evaluate third-party data coverage and quality of data between third-party ESG vendors. In addition, the Manager and the Sub-Investment Manager continue to explore new third-party ESG data products and vendors to evaluate potential enhancements to our existing third-party ESG data coverage.

2. CVaR

	CVaR	Coverage
2022 reference period	-1.7%	24%
2023 reference period	-1.6%	19%

Year-on-year, the CVaR projected loss has improved. This is due to improvements in individual corporate issuers held in the Portfolio and due to trading activity.

Year-on-year CVaR coverage has moved due to changes associated with corporate issuers held and trading activity within the Portfolio.

3. Exclusions

Consistent with the previous calendar year, there were no breaches during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the “**Corporate Issuer PAIs**”) and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the “**Sovereign PAIs**”) on sustainability factors (together the “**Product Level PAIs**”):

Part 1 – Corporate Issuer PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
<i>Environmental</i>	PAI 15 - GHG intensity
<i>Social</i>	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
CANADA (GOVERNMENT OF)	O - Public administration and defence; compulsory social security	2.27%	Canada
KOREA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.81%	Korea (South), Republic of
JAPAN (GOVERNMENT OF) 5YR #149	O - Public administration and defence; compulsory social security	1.75%	Japan
HESSE (STATE OF)	O - Public administration and defence; compulsory social security	1.51%	Germany
INDONESIA GOVERNMENT BOND	O - Public administration and defence; compulsory social security	1.26%	Indonesia
KOREA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.07%	Korea (South), Republic of
GEMEINSAME BUNDESLÄENDER RegS	N/A	1.06%	Germany
CROATIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	0.99%	Croatia
NYKREDIT REALKREDIT A/S RegS	K - Financial and insurance activities	0.96%	Denmark
INDONESIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	0.90%	Indonesia

MADRID COMMUNITY OF RegS	O - Public administration and defence; compulsory social security	0.84%	Spain
FNMA 30YR UMBS	N/A	0.82%	N/A

* O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.

What was the proportion of sustainability-related investments?

What was the asset allocation?

- The Portfolio aims to hold a minimum of 60% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 90.9% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 40% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 9.1% "Other" investments.

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly.

Asset allocation describes the share of investments in specific assets.

This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

In which economic sectors were the investments made?

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	0.7%
C - Manufacturing	5.4%
D - Electricity, gas, steam and air conditioning supply	1.9%
E - Water supply; sewerage; waste management and remediation activities	0.0%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.5%
H - Transporting and storage	0.3%
I - Accommodation and food service activities	0.2%
J - Information and communication	3.7%
K - Financial and insurance activities	15.1%
L - Real estate activities	0.8%
M - Professional, scientific and technical activities	0.4%
N - Administrative and support service activities	0.1%
O - Public administration and defence; compulsory social security	39.2%
U - Activities of extraterritorial organisations and bodies	2.7%
Q - Human health and social work activities	0.2%
None	28.8%

**O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A - the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives, any to-be-announced security (“**TBA**”), or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Manager and the Sub-Investment Manager view ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Diversified Income FMP – 2024 (the “Portfolio”)

Legal entity identifier: 549300577U1V3H24JG33

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made sustainable investments with an environmental objective: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective: ____%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we also have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Given the Portfolio's investment objective, investment term and maturity date of 30 June 2024 (the "**Maturity Date**"), the Portfolio's turnover was limited. Therefore while the Portfolio will promote environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics was focused on the portfolio construction phase.

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	58	1-100	99%
Third-Party Data	5.2	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends. With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("CVaR") measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a depreciation of 6.8% in the valuation of assets under assessment. The Reference Period is an average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 68% and this is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio also excluded emerging market corporate debt issuers in Emerging Market Countries that were involved in the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

Given the Portfolio sought to provide a yield over a specific term, which ends on the Maturity Date, the Portfolio's turnover was limited.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual disclosure template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0%-100%
2022 reference period	57	4.9	98%
2023 reference period	58	5.2	99%

Year-on-year, the NB ESG Quotient rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity.

Year-on-year, the third-party data rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity as well as potential changes to, or differences in, the issuer's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-3.6%	72%
2023 reference period	-6.8%	68%

Year-on-year, the CVaR projection has moved due to changes associated with corporate issuers held and trading activity within the Portfolio.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the “Schedule of Investments” section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
NATWEST GROUP PLC	K - Financial and insurance activities	2.89%	United Kingdom
GENERAL MOTORS FINANCIAL CO INC	K - Financial and insurance activities	2.86%	United States
SPRINT CORP	J - Information and Communication	2.58%	United States
BALL CORP	C - Manufacturing	2.54%	United States
HSBC HOLDINGS PLC	K - Financial and insurance activities	2.52%	United Kingdom
ATHENE GLOBAL FUNDING 144A	K - Financial and insurance activities	2.51%	United States
WARNERMEDIA HOLDINGS INC	J - Information and Communication	2.51%	United States
BARCLAYS PLC	K - Financial and insurance activities	2.48%	United Kingdom
NRG ENERGY INC 144A	D - Electricity, gas, steam, and air conditioning supply	2.47%	United States
MAGALLANES INC 144A	J - Information and Communication	2.44%	United States
MASHREQBANK PSC RegS	K - Financial and insurance activities	2.39%	United Arab Emirates
SYNCHRONY FINANCIAL	K - Financial and insurance activities	2.37%	United States
EQT MIDSTREAM PARTNERS LP	H - Transportation and storage	2.29%	United States
FORD MOTOR CREDIT COMPANY LLC	K - Financial and insurance activities	2.14%	United States
BANK MANDIRI (PERSERO) TBK PT MTN RegS	K - Financial and insurance activities	2.13%	Indonesia

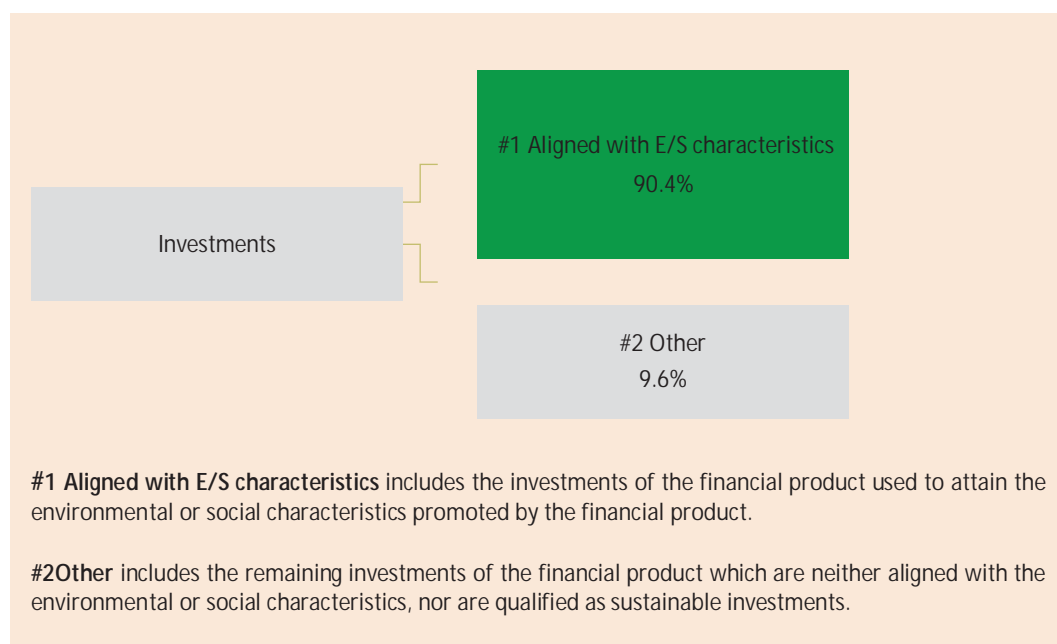

What was the proportion of sustainability-related investments?

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 90.4% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 9.6% “Other” investments.

Asset allocation describes the share of investments in specific assets.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period is an average of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	0.7%
C - Manufacturing	2.1%
D - Electricity, gas, steam and air conditioning supply	4.3%
H - Transporting and storage	7.4%
F - Construction	1.0%
I - Accommodation and food service activities	2.0%
J - Information and communication	6.8%
K - Financial and insurance activities	62.8%
M - Professional, scientific and technical activities	0.7%
L - Real estate activities	0.6%
N - Administrative and support service activities	6.5%
R - Arts, entertainment and recreation	1.8%
U - Activities of extraterritorial organisations and bodies	1.0%
None	2.3%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds *, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Given the Portfolio's investment objective, investment term and Maturity Date, while the Portfolio promotes environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics was focused on the portfolio construction phase as the intention of the Sub-Investment Manager was to maintain low turnover.

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process as it allowed the Sub-Investment Manager to ensure that its initial assessment of the issuer (at the point of inception) remained accurate and informed the issuer's ongoing NB ESG Quotient rating. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio does not use a benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name: Neuberger Berman Global Equity Megatrends Fund (the “**Portfolio**”)
Legal entity identifier: 549300NOKC884YXB6S20

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("GHG") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and are reported, in aggregate, below.

● *How did the sustainability indicators perform?*

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: C G: 2.6	ES: A-D G: 1-4	96%
Third-Party Data	5.6	0-10	

With regards to the NB ESG Quotient ratings, for environmental and social (“**ES**”) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (“**G**”) ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio’s aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio’s promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security’s or portfolio’s market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 34.2% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 92% and this is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-party Data Rating	Combined Coverage
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: C G: 2.5	5.4	92%
2023 reference period	ES: C G: 2.6	5.6	96%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, the NB ESG Quotient G rating has declined and the third-party data rating has improved. This may be due to an improvement in individual companies according to the third-party data provider, or due to differences in the company's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-27.9%	94%
2023 reference period	-34.2%	92%

Year-on-year, the CVaR projection has moved due to changes associated with companies held and trading activity within the Portfolio. As previously noted, the scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

N/A – the Portfolio did not commit to holding sustainable investments.

- *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

N/A – the Portfolio did not commit to holding sustainable investments

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

The Product Level PAIs that were taken into consideration were subject to there being adequate, reliable and verifiable data coverage for such indicators. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
PETS AT HOME PLC	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	5.7%	United Kingdom
CRITEO ADR REPRESENTING SA	M - Professional, scientific and technical activities	5.7%	France
EXPEDIA GROUP INC	N - Administrative and support service activities	5.5%	United States
ALIBABA GROUP HOLDING ADR REPRESENTING	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	5.4%	China
ALPHABET INC CLASS A	J - Information and communication	5.0%	United States
DELTA AIR LINES INC	H - Transporting and storage	4.9%	United States
PERRIGO PLC	S - Other services activities	4.7%	United States
STERICYCLE INC	E - Water supply; sewerage; waste management and remediation activities	4.6%	United States
AMDOCS LTD	J - Information and communication	4.6%	United States
VISTRA CORP	D - Electricity, gas, steam and air conditioning supply	4.6%	United States
ELEMENT FLEET MANAGEMENT CORP	K - Financial and insurance activities	4.5%	Canada
GEN DIGITAL INC	J - Information and communication	4.5%	United States
CORNING INC	C - Manufacturing	4.3%	United States
UBER TECHNOLOGIES INC	J - Information and communication	4.2%	United States
SCHOLASTIC CORP	J - Information and communication	4.1%	United States

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

What was the proportion of sustainability-related investments?

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 97.6% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 2.4% "Other" investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Asset allocation describes the share of investments in specific assets.

● *In which economic sectors were the investments made?*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	13.7%
D - Electricity, gas, steam and air conditioning supply	4.7%
E - Water supply; sewerage; waste management and remediation activities	4.8%
F - Construction	1.3%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	11.3%
H - Transporting and storage	5.0%
J - Information and communication	26.9%
K - Financial and insurance activities	6.5%
M - Professional, scientific and technical activities	7.2%
N - Administrative and support service activities	9.7%
Q - Human health and social work activities	4.2%
S - Other services activities	4.8%

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks. Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the

Portfolio focused investment in companies that are exposed to global long-term themes.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker..

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark

- *How does the reference benchmark differ from a broad market index?*

N/A

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

N/A

- *How did this financial product perform compared with the reference benchmark?*

N/A

- *How did this financial product perform compared with the broad market index?*

N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Flexible Credit Income Fund (the “Portfolio”)

Legal entity identifier: 5493004BPE0UFYX6FZ81

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> with a social objective</div></div></div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	63	1-100	93%
Third-Party Data	5.5	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends. With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("**CVaR**") measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 12.3% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 42% and this coverage is an average of the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Portfolio also excluded corporate debt issuers in Emerging Market Countries that were involved in, the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	62	5.1	93%
2023 reference period	63	5.5	93%

Year-on-year, the NB ESG Quotient rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity.

Year-on-year, the third-party data rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity as well as potential changes to, or differences in, the issuer's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-12.9%	48%
2023 reference period	-12.3%	42%

Year-on-year, the CVaR projected loss has improved. This is due to improvements in individual corporate issuers held in the Portfolio and due to trading activity.

Year-on-year CVaR coverage has moved due to changes associated with corporate issuers held and trading activity within the Portfolio.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
MCAFEE PIK PREF EQUITY Prvt	J - Information and Communication	2.4%	United States
TREASURY NOTE (OTR)	O - Public administration and defence; compulsory social security*	1.7%	United States

**O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies*

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 87.5% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 12.5% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	5.6%
C - Manufacturing	13.8%
D - Electricity, gas, steam and air conditioning supply	2.6%
E - Water supply; sewerage; waste management and remediation activities	0.4%
F - Construction	0.8%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.9%
H - Transporting and storage	5.7%
I - Accommodation and food service activities	0.4%
J - Information and communication	11.7%
K - Financial and insurance activities	34.0%
L - Real estate activities	3.0%
M - Professional, scientific and technical activities	0.7%
N - Administrative and support service activities	3.2%
O - Public administration and defence; compulsory social security*	8.0%
P - Education	0.0%
Q - Human health and social work activities	1.3%
R - Arts, entertainment and recreation	2.0%
S - Other services activities	0.0%
U - Activities of extraterritorial organisations and bodies	0.1%
None	3.7%

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – the Portfolio does not use a benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global High Yield SDG Engagement Fund (the “**Portfolio**”)

Legal entity identifier: 549300YE6BLJU5JC DI13

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ☐ Yes

☒ Yes ☐ No

☐ It made sustainable investments with an environmental objective: ____%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective: ____%

✘ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 30.1%* of sustainable investments**

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

- ✗ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

 with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

*The Portfolio introduced a minimum sustainable investment commitment of 10% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of 2023 (as the only quarter ends following the introduction of the sustainable investment commitment). The sustainable investment figures are not included in the Asset Allocation chart due to the inconsistent reference periods.

***Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments)*

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted the United Nations Sustainable Development Goals (“**SDGs**”) by aiming to engage directly with 100% of the corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer). The Sub-Investment Manager set key performance indicators (“**KPIs**”) for corporate issuers that were aligned to the SDGs which related to the issuers' products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. The Sub-Investment Manager prioritised investment in corporate issuers that had the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs.

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria was constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with 100% of corporate issuers.

The Reference Period is an average of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	58	1-100	100%
Third-Party Data	5.7	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 and 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Engagement reporting:

As mentioned above, the Sub-Investment Manager contributed towards the achievement of the SDGs by aiming to engage with 100% of corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer).

For the Reference Period, outreach and/or interaction took place with 100% of corporate issuers, in an effort to set up meetings, but engagement only took place with 96% of corporate issuers. The Sub-Investment Manager views this additional engagement as going beyond interactions. For further detail please see the Neuberger Berman Stewardship and Engagement Policy [here](#).

Below the Sub-Investment Manager has included a summary of its engagement efforts during the Reference Period.

The Sub-Investment Manager engaged with 296 companies held by the Portfolio during the Reference Period.
55% of the Sub-Investment Manager's engagements were direct one-to-one engagements (either remotely or in-person).

51% of the Sub-Investment Manager's engagements were with CEO / CFO level staff.
15 of the total 17 the UN Sustainable Development Goals ("SDGs") were covered by the Sub-Investment Manager's engagement objectives.
26% of companies engaged with over the Reference Period have either fully achieved their engagement objective or have taken partial action towards achieving their engagement objective.

Further information on the Sub-Investment Manager's engagement efforts can be found in the Portfolio's Engagement Report [here](#).

3. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("CVaR") measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 11.9% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 54% and this is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

4. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new

investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities have been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio was prohibited from purchasing the securities of issuers that were involved in tobacco production such as cigars, cigarettes, e-cigarettes, smokeless tobacco, dissolvable and chewing tobacco. This also included issuers that grow or process raw tobacco leaves.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual disclosure template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	68	5.6	100%
2023 reference period	58	5.7	100%

Year-on-year, the NB ESG Quotient rating has declined and the third-party data rating has improved. This may be due to an improvement in individual issuers according to the third-party data provider, or due to differences in the issuer's third-party rating by the provider.

2. Engagement Reporting

	Companies engaged with	% of the engagements were direct one-to-one engagements (either	% of the engagements were with CEO / CFO level staff	Number of SDGs covered (out of 17)	% of companies engaged with that have either fully achieved their engagement

		remotely or in-person)			objective or have taken partial action towards achieving their engagement objective
2022 reference period	207	61%	50%	15	20%
2023 reference period	296	55%	51%	15	26%

3. CVaR

	CVaR	Coverage
2022 reference period	-9.1%	53%
2023 reference period	-11.9%	54%

Year-on-year, the CVaR projection has moved due to changes associated with corporate issuers held and trading activity within the Portfolio.

4. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective during the reference period. From 2 August 2023 onwards, the Portfolio committed to holding a minimum threshold of 10% sustainable investments. The sustainable investments promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included

an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall good governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the SDGs

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

From 2 August 2023 onwards, the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "PAIs") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises</p> <p>PAI 12 - Unadjusted gender pay gap</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC

Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?” above.
2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint

	PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 – 31 December 2023.

Largest investments	Sector	% Assets	Country
LORCA TELECOM BONDCO SAU RegS	J - Information and Communication	0.7%	Spain

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 96.8% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio introduced a minimum sustainable investment commitment of 10% as of 2 August 2023. The sustainable investment disclosure in this periodic report has therefore been prepared based on the Portfolio's holdings as the average of the third and fourth quarter ends of the Reference Period (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 30.1% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 3.2% "Other" investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends, with the exception of the sustainable investment commitment, which for this Reference Period only was calculated based on the average of the third and fourth quarter ends.

The Sustainable Investment percentage as of an average of the third and fourth quarter ends of 2023 is 30.1%, which contained 19.6% sustainable investments with an environmental objective not aligned with the EU Taxonomy and 10.5% socially sustainable investments. The Portfolio did not commit to holding Taxonomy-aligned investments.

● *In which economic sectors were the investments made?*

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	5.8%
C - Manufacturing	17.0%
D - Electricity, gas, steam and air conditioning supply	3.4%
E - Water supply; sewerage; waste management and remediation activities	0.7%
F - Construction	2.0%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	5.4%
H - Transporting and storage	7.3%

K - Financial and insurance activities	29.3%
L - Real estate activities	2.8%
M - Professional, scientific, and technical activities	1.2%
N - Administrative and support service activities	5.7%
Q - Human health and social work activities	2.9%
R - Arts, entertainment, and recreation	1.0%

S - Other services activities
None

0.1%
1.3%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio introduced a minimum sustainable investment commitment of 10% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of the Reference Period (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 19.6% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Portfolio introduced a minimum sustainable investment commitment of 10% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of the Reference Period (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 10.5% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process.

This program was focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same were monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker (see Engagement Reporting section above for further details).

The Portfolio promoted environmental and social characteristics, whilst contributing towards the achievement of the SDGs by aiming to engage directly with 100% of corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer), primarily through in-person meetings and calls, setting key KPIs aligned to the SDGs which related to the issuers' products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. The Sub-Investment Manager prioritised investment in corporate issuers that had the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs. The investee issuer's progress relative to the KPIs set was evaluated by the Sub-Investment Manager quarterly. This direct engagement with corporate issuers was an essential part of the investment process and the Portfolio's contribution towards the achievement of the SDGs.

The Sub-Investment Manager used an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the **"Engagement Potential Indicator"**). The Engagement Potential Indicator, on a scale of 1-5, provided a systematic evaluation of an issuer's willingness and ability to engage with the Sub-Investment Manager on the SDGs. For example, an issuer determined to be unwilling or unable to engage received an Engagement Potential Indicator of "1", whereas an issuer willing to engage on becoming a leader in contributing to the SDGs received an Engagement Potential Indicator of "5". The Sub-Investment Manager did not invest in issuers with an Engagement Potential Indicator rating of below "2". The Engagement Potential Indicator considered a diverse set of factors including the relevance of the SDGs to an issuer's business operations, an issuer's disclosure practices and the Sub-Investment Manager's relationship with the issuer, in addition to the financial constraints of the issuers.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

How does the reference benchmark differ from a broad market index?

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

N/A

- *How did this financial product perform compared with the reference benchmark?*

N/A

- *How did this financial product perform compared with the broad market index?*

N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Investment Grade Credit Fund (the “Portfolio”)

Legal entity identifier: 549300TIVE0UW3FSBE51

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made sustainable investments with an environmental objective: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective: ____%

No

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	61	1-100	100%
Third-Party Data	6.8	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("**CVaR**") measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 3.3% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 68% and this coverage is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	62	6.7	100%
2023 reference period	61	6.8	100%

Year-on-year, the NB ESG Quotient rating has declined and the third-party data rating has improved. This may be due to an improvement in individual issuers according to the third-party data provider, or due to differences in the issuer's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-3.4%	71%
2023 reference period	-3.3%	68%

Year-on-year, the CVaR projected loss has improved. This is due to improvements in individual corporate issuers held in the Portfolio and due to trading activity.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
UNITED AIR 2020-1 A PTT	H - Transportation and storage	1.5%	United States
WEC ENERGY GROUP INC	D - Electricity, gas, steam, and air conditioning supply	1.3%	United States
HSBC HOLDINGS PLC	K - Financial and insurance activities	1.3%	United Kingdom
ATHENE GLOBAL FUNDING 144A	K - Financial and insurance activities	1.0%	United States
JP MORGAN CHASE & CO	K - Financial and insurance activities	1.0%	United States
GOLDMAN SACHS GROUP INC/THE	K - Financial and insurance activities	1.0%	United States
BARCLAYS PLC	K - Financial and insurance activities	1.0%	United Kingdom
MARATHON PETROLEUM CORP	C - Manufacturing	0.9%	United States
DELL INTERNATIONAL LLC	K - Financial and insurance activities	0.9%	United States
SOUTHERN ELECTRIC GENERATING CO	D - Electricity, gas, steam, and air conditioning supply	0.9%	United States
LLOYDS BANKING GROUP PLC	K - Financial and insurance activities	0.8%	United Kingdom
DOMINION ENERGY INC	D - Electricity, gas, steam, and air conditioning supply	0.8%	United States
CITIGROUP INC	K - Financial and insurance activities	0.8%	United States
ANHEUSER-BUSCH INBEV WORLDWIDE INC	K - Financial and insurance activities	0.8%	Belgium
F&G GLOBAL FUNDING RegS	K - Financial and insurance activities	0.8%	United States

What was the proportion of sustainability-related investments?

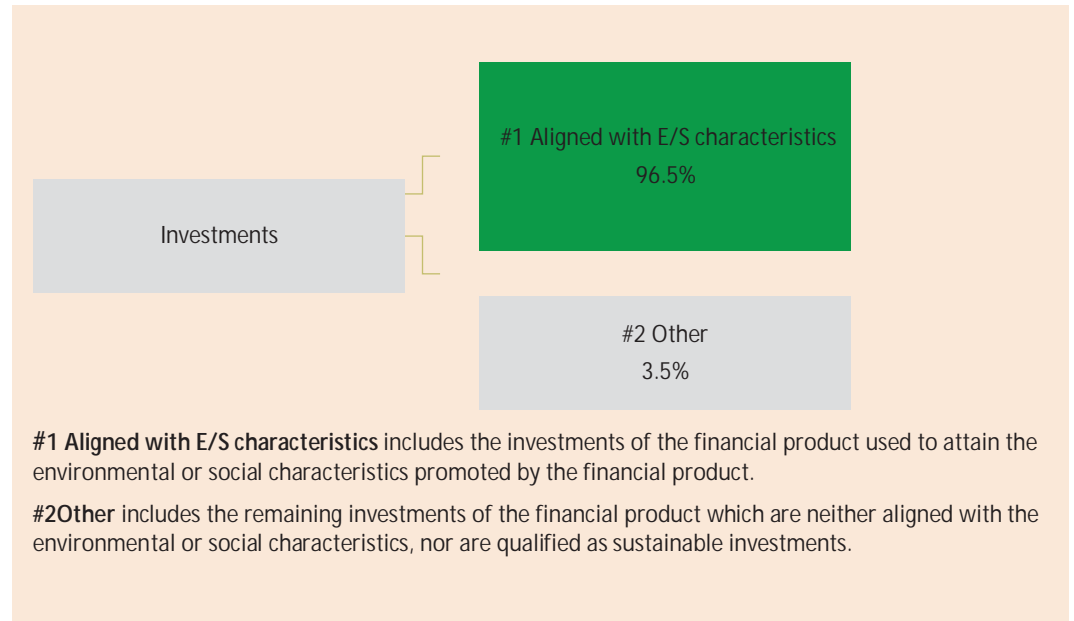

What was the asset allocation?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 96.5% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.

The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 3.5% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Asset allocation describes the share of investments in specific assets.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	2.1%
C - Manufacturing	14.3%
D - Electricity, gas, steam and air conditioning supply	9.2%
E - Water supply; sewerage; waste management and remediation activities	0.7%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.2%
H - Transporting and storage	5.2%
I - Accommodation and food service activities	0.7%
J - Information and communication	13.0%
K - Financial and insurance activities	45.5%
L - Real estate activities	2.5%
M - Professional, scientific and technical activities	1.9%
N - Administrative and support service activities	0.8%
O - Public administration and defence; compulsory social security*	0.5%
Q - Human health and social work activities	0.8%
U - Activities of extraterritorial organisations and bodies	0.5%
None	0.2%

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each

investment which the Portfolio made. The the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Opportunistic Bond Fund (the “Portfolio”)

Legal entity identifier: 549300ZNZZ2YDVTNRE14

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with a social objective</div></div></div></div></div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager and Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	62	1-100	73%
Third-Party Data	6.2	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends. With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue' and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 4.5% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Manager and the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Manager and the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 23% and this coverage is an average of the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager and the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Portfolio also excluded corporate debt issuers in Emerging Market Countries that were involved in the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Rating	Data	Combined Coverage
Range	1-100	0-10		0-100%
2022 reference period	61	5.7		80%
2023 reference period	62	6.2		73%

Year-on-year, the NB ESG Quotient rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity.

Year-on-year, the third-party data rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity as well as potential changes to, or differences in, the issuer's third-party rating by the provider.

Year-on-year, the combined coverage of the NB ESG Quotient and the third-party rating has moved due to changes associated with issuers held and trading activity within the Portfolio.

2. CVaR

	CVaR	Coverage
2022 reference period	-4.2%	24%
2023 reference period	-4.5%	23%

Year-on-year, the CVaR projection has moved due to changes associated with corporate issuers held and trading activity within the Portfolio.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, , the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the “**Corporate Issuer PAIs**”) and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the “**Sovereign PAIs**”) on sustainability factors (together the “**Product Level PAIs**”):

Part 1 – Corporate Issuer PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Part 2 – Sovereign PAIs	
<i>Environmental</i>	PAI 15 - GHG intensity
<i>Social</i>	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and

Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
NEW ZEALAND (GOVERNMENT OF) RegS	O - Public administration and defence; compulsory social security*	4.6%	New Zealand
MEX BONOS DE DESARROLLO	O - Public administration and defence; compulsory social security*	2.1%	Mexico
TREASURY NOTE (20LD)	O - Public administration and defence; compulsory social security*	1.2%	United States
NGG FINANCE PLC RegS	K - Financial and insurance activities	1.1%	United Kingdom
CHINA PEOPLES REPUBLIC OF (GOVERNMENT)	O - Public administration and defence; compulsory social security*	1.1%	China
PORTUGAL (REPUBLIC OF)	O - Public administration and defence; compulsory social security*	0.9%	Portugal
CHINA PEOPLES REPUBLIC OF (GOVERNMENT)	O - Public administration and defence; compulsory social security*	0.9%	China
MEXICO (UNITED MEXICAN STATES) (GO)	O - Public administration and defence; compulsory social security*	0.8%	Mexico
TREASURY NOTE	O - Public administration and defence; compulsory social security*	0.8%	United States
POLAND (REPUBLIC OF)	O - Public administration and defence; compulsory social security*	0.8%	Poland

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

STACR_18-DNA1 M2	N/A	0.7%	United States
FNMA 30YR UMBS	N/A	0.7%	N/A
STACR 2017-DNA1 M2	N/A	0.7%	United States
INDONESIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security*	0.7%	Indonesia
ELECTRICITE DE FRANCE SA MTN RegS	D - Electricity, gas, steam, and air conditioning supply	0.7%	France

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 65% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 92.2% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 35% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 7.8% "Other" investments.

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	0.7%
C - Manufacturing	7.6%
D - Electricity, gas, steam and air conditioning supply	1.9%
E - Water supply; sewerage; waste management and remediation activities	0.3%
F - Construction	0.1%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.2%
H - Transporting and storage	1.3%
I - Accommodation and food service activities	0.0%
J - Information and communication	5.5%
K - Financial and insurance activities	18.9%
L - Real estate activities	1.6%
M - Professional, scientific and technical activities	0.1%
N - Administrative and support service activities	1.5%
O - Public administration and defence; compulsory social security*	30.6%
P - Education	0.2%
Q - Human health and social work activities	0.1%
R - Arts, entertainment and recreation	0.7%
U - Activities of extraterritorial organisations and bodies	0.6%
None	26.1%

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives, any to-be-announced security (“**TBA**”), or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Manager and the Sub-Investment Manager view ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Real Estate Securities Fund (the “Portfolio”)

Legal entity identifier: 549300JOIU4VRI67006

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made sustainable investments with an environmental objective: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective: ____%

No

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). All Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; and materials sourcing.
- **Social Characteristics:** access to healthcare; community relations; employee incentives & risk taking; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; and workforce diversity & inclusion.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics. Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 1.8	ES: A-D G: 1-4	98%
Third-Party Data	6.5	0-10	

With regards to the NB ESG Quotient ratings, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks.. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“CVaR”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 24.6% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 96% and this coverage is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Sub-Investment Manager prohibited purchases of issuers that own, operate or primarily provided integral services to private prisons given the significant social controversy, reputational risks, dependency on Justice Department policies and facilities that are not easily reconfigurable for alternate uses.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Rating	Data	Combined Coverage
Range	ES: A-D G: 1-4	0-10		0-100%
2022 reference period	ES: B G: 1.7	6.4		100%
2023 reference period	ES: B G: 1.8	6.5		98%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, the NB ESG Quotient G rating has declined. The third-party data rating has improved. This may be due to an improvement in individual companies according to the third-party data provider, or due to differences in the company's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-15.9%	94%
2023 reference period	-24.6%	96%

Year-on-year, the CVaR projected loss has increased due to changes associated with companies held and trading activity within the Portfolio. As previously noted, the scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*
N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
AMERICAN TOWER REIT CORP	L - Real estate activities	5.1%	United State
PROLOGIS REIT INC	L - Real estate activities	4.7%	United State
PUBLIC STORAGE REIT	L - Real estate activities	4.5%	United State
CROWN CASTLE INC	N - Administrative and support service activities	3.2%	United State
EQUINIX REIT INC	J - Information and Communication	3.0%	United State
UOL GROUP LTD	F - Construction	2.9%	Singapore
MITSUMI FUDOSAN LTD	L - Real estate activities	2.8%	Japan
REALTY INCOME REIT CORP	L - Real estate activities	2.7%	United State
WELLTOWER INC	L - Real estate activities	2.4%	United State
REGION GROUP STAPLED UNITS LTD	L - Real estate activities	2.4%	Australia
KIMCO REALTY REIT CORP	L - Real estate activities	2.3%	United State
SIMON PROPERTY GROUP REIT INC	L - Real estate activities	2.2%	United State
VICI PPTYS INC	L - Real estate activities	2.2%	United State
RIOCAN REAL ESTATE INVESTMENT TRUS	L - Real estate activities	2.1%	Canada
SEGRO REIT PLC	L - Real estate activities	2.1%	United Kingdom

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 97.7% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 2.3% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process

of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	1.6%
F - Construction	7.8%
H - Transporting and storage	0.7%
J - Information and communication	4.9%
L - Real estate activities	81.8%
N - Administrative and support service activities	3.2%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics. The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate), the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their valuation, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Sustainable Equity Fund (the “Portfolio”)

Legal entity identifier: 549300XRT8BVEN8P0A74

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net-zero goal, the Manager will promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions¹. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the

¹ Scope 1 emissions: are direct emissions from a company's owned or controlled sources (such as emissions created directly by the company's business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company's value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.4	ES:A-D G: 1-4	99%
Third-Party Data	7.4	0-10	

With regards to the NB ESG Quotient rating, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“CVaR”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 5.0% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 99% and this is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Portfolio did not invest in companies that derived more than 5% of their revenue from fur and specialty leather manufacturers, or military contractors. The Portfolio also excluded companies from the investment universe that were involved in controversial activities and behaviour, such as gambling, alcohol and nuclear power. In addition, the Portfolio excluded companies involved in dictatorial regimes/ high ESG controversies; companies that exhibited very poor behaviours in terms of environmental pollution, human rights' issues or governance controversies; and companies that were not transparent on ESG or score very poorly on ESG metrics overall.

When applying ESG exclusions to the Portfolio, the Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.2	7.2	100%
2023 reference period	ES: B G: 2.4	7.4	99%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, the NB ESG Quotient G rating has declined and the third-party data rating has improved. This may be due to an improvement in individual companies according to the third-party data provider, or due to differences in, the company's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-5%	99%
2023 reference period	-5%	99%

Year-on-year, the CVaR projection has remained unchanged.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Manager then proceeded to measure the companies' environmental or social economic contribution.

The Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager took into account the principal adverse impacts indicators (the "**PAIs**") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

<i>Social and employee matters</i>	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises</p> <p>PAI 12 - Unadjusted gender pay gap</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>
------------------------------------	--

Consideration of the PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager also considered violations of minimum safeguards. The Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's assessment of companies) throughout the Reference Period.

The Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “*How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*” above.
2. The Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector

<i>Social and employee matters</i>	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>
------------------------------------	--

Consideration of the Product Level PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 – 31 December 2023

Largest investments	Sector	% Assets	Country
MICROSOFT CORP	J - Information and Communication	8.3%	United States
ALPHABET INC CLASS A	J - Information and Communication	5.8%	United States
AMAZON COM INC	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	5.1%	United States
UNITEDHEALTH GROUP INC	K - Financial and insurance activities	3.9%	United States
THERMO FISHER SCIENTIFIC INC	C - Manufacturing	3.3%	United States
NETFLIX INC	J - Information and Communication	3.0%	United States
3I GROUP PLC	K - Financial and insurance activities	2.9%	United Kingdom
NIKE INC CLASS B	C - Manufacturing	2.8%	United States
BAKKAFROST	A - Agriculture, Forestry and Fishing	2.7%	Faroe Islands
ADOBE INC	J - Information and Communication	2.6%	United States
INTUIT INC	J - Information and Communication	2.6%	United States
ASML HOLDING NV	C - Manufacturing	2.5%	Netherlands
ESTEE LAUDER INC CLASS A	C - Manufacturing	2.4%	United States
ADYEN NV	J - Information and Communication	2.3%	Netherlands

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 98.8% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio commits to holding at least 50% sustainable investments. During the Reference Period, the Portfolio held 60.1% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 1.2% “other” investments.

The Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
A – Agriculture, forestry and fishing	2.8%
C – Manufacturing	32.6%
G – Wholesale and retail trade; repair of motor vehicles and motorcycles	8.9%
I – Accommodation and food service activities	0.6%
J – Information and communication	30.9%
K – Financial and insurance activities	19.2%
N – Administrative and support service activities	5.0%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 41.4% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of socially sustainable investments?

The Portfolio held 18.7% socially sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and ILO Standards.

The Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark..

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A

- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Sustainable Value Fund (the “Portfolio”)*

Legal entity identifier: 549300VLTCS1K4EA7H66

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>

*Effective 2nd August 2023, the Neuberger Berman Systematic Global Sustainable Value Fund changed name to the Neuberger Berman Global Sustainable Value Fund.

**Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we also have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager promoted and will continue to promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions.¹ There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the Composite ESG Rating, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

I. The Composite ESG Rating:

The above environmental and social characteristics were derived and considered using a blend of environmental and social characteristics derived from a proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") and a themes based ESG rating system ("**NB ESG Themes**"), (together the "**Composite ESG Rating**").

The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics. Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

¹ Scope 1 emissions are direct emissions from a company's owned or controlled sources (such as emissions created directly by the company's business processes or from vehicles owned by the company). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions are all other indirect emissions that occur in a company's value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

The NB ESG Themes rating system is built around the concept of sector specific ESG themes (provided by third-party data vendors), which were custom weighted and produced an overall NB ESG Themes rating for companies. Sector specific NB ESG Themes included individual key ESG issues/characteristics or aggregated key ESG issues/characteristics which in turn form an ESG theme. The relevant environmental and social characteristics are listed above and sit within overarching ESG themes.

Companies with a favourable and/or an improving Composite ESG Rating had a higher chance of being included in the Portfolio. Companies with a poor Composite ESG Rating, especially where a poor Composite ESG Rating was not being addressed by a company, were more likely to be removed from the investment universe or divested from the Portfolio. While the Composite ESG Rating of companies was considered as part of the investment process, there is no minimum Composite ESG Rating to be attained by a company prior to investment.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
Composite ESG Rating	0.6	-1 to +1	100%
Third-Party Data	7.3	0-10	

With regards to the Composite ESG Rating, a rating between -1 and +1 is used where -1 is the lowest rating and +1 is the highest rating.

The average Composite ESG Rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

II. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities have been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and until 2 August 2023, the Neuberger Berman Enhanced Sustainable Exclusions Policy. For the avoidance of doubt, the Neuberger Berman Enhanced Sustainable Exclusions Policy was disapplied on 2 August 2023. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment

Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the Composite ESG Rating and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. Composite ESG Rating

	Composite ESG Rating	Third-Party Data Rating	Combined Coverage
Range	-1 to +1	0-10	0-100%
2022 reference period	0.6	7.3	100%
2023 reference period	0.6	7.3	100%

Year-on-year, the Composite ESG rating and third-party data rating has remained unchanged.

2. Exclusions

Consistent with the previous calendar year, there were no breaches during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social

objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?” above.
2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 – 31 December 2023

Largest investments	Sector	% Assets	Country
APPLE INC	C - Manufacturing	2.1%	United States
ALPHABET INC CLASS A	J - Information and Communication	1.7%	United States
COMCAST CORP	J - Information and Communication	1.6%	United States
MERCK & CO INC	C - Manufacturing	1.5%	United States
SHELL PLC	B - Mining and Quarrying	1.5%	United Kingdom
TOTALENERGIES	C - Manufacturing	1.4%	France
GILEAD SCIENCES INC	C - Manufacturing	1.3%	United States
ABBVIE INC	C - Manufacturing	1.2%	United States
MICROSOFT CORP	J - Information and Communication	1.2%	United States
CISCO SYSTEMS INC	C - Manufacturing	1.2%	United States
AMERIPRISE FINANCE INC	K - Financial and insurance activities	1.1%	United States
CIGNA	Q - Human health and social work activities	1.1%	United States
CITIGROUP INC	K - Financial and insurance activities	1.0%	United States
APPLIED MATERIAL INC	C - Manufacturing	1.0%	United States
CSX CORP	H - Transportation and storage	1.0%	United States

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 99.1% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio commits to holding at least 50% sustainable investments. During the Reference Period, the Portfolio held 66.9% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 0.9% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an Composite ESG Rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly and may be based on incomplete or inaccurate company or third-party data. The calculation was based on a mark-to-market assessment of the Portfolio. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	4.4%
C - Manufacturing	38.8%
D - Electricity, gas, steam and air conditioning supply	1.6%
F - Construction	2.9%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	7.5%
H - Transporting and storage	4.0%
I - Accommodation and food service activities	1.6%
J - Information and communication	12.7%
K - Financial and insurance activities	20.7%

L - Real estate activities	1.9%
M - Professional, scientific and technical activities	0.8%
N - Administrative and support service activities	0.8%
Q - Human health and social work activities	2.0%
S - Other services activities	0.1%
None	0.1%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm whether the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds *, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 44.0% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Portfolio held 22.9% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the Composite ESG Rating and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The Composite ESG Rating (as explained above) was used to measure the environmental and social characteristics promoted by the Portfolio. By integrating the investment team's proprietary ESG analysis (the Composite ESG Rating) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager leveraged NB internally led engagement with management teams of companies, this was achieved through a robust ESG engagement program which took place at an NB entity level rather than at a Portfolio level. The Sub-Investment Manager viewed this internally led engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A - The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman High Yield Bond Fund (the “Portfolio”)

Legal entity identifier: 549300IJY8N43QRUU802

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with corporate issuers.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends..

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	57	1-100	99%
Third-Party Data	5.3	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 12.3% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 51% and this coverage has been calculated based on the average of the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● *...and compared to previous periods?*

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual disclosure template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	57	5.0	99%
2023 reference period	57	5.3	99%

Year-on-year, the NB ESG Quotient rating has remained unchanged and the third-party data rating has improved. This may be due to an improvement in individual issuers according to the third-party data provider, or due to differences in the issuer's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-12.0%	57%
2023 reference period	-12.3%	51%

Year-on-year, the CVaR projection has moved due to changes associated with corporate issuers held and trading activity within the Portfolio.

Year-on-year CVaR coverage has moved due to changes associated with corporate issuers held and trading activity within the Portfolio.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third- party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
NEW FORTRESS ENERGY INC 144A	D - Electricity, gas, steam, and air conditioning supply	0.9%	United States
AMERICAN AIRLINES INC 144A	H - Transportation and storage	0.9%	United States
AMERICAN AIRLINES INC 144A	H - Transportation and storage	0.8%	United States
TREASURY NOTE (OLD)	O - Public administration and defence; compulsory social security	0.7%	United States
PAREXEL 2L TL-B 7/21 Pvt	Q - Human health and social work activities	0.6%	United States
ALLIANT HOLDINGS INTERMEDIATE LLC 144A	K - Financial and insurance activities	0.6%	United States
TRANSDIGM INC 144A	C - Manufacturing	0.6%	United States
CCO HOLDINGS LLC 144A	J - Information and Communication	0.6%	United States
BLACKSTONE CQP HOLDCO LP 144A	N - Administrative and support service activities	0.6%	United States
PRESIDIO HOLDING INC 144A	J - Information and Communication	0.6%	United States
CSC HOLDINGS LLC 144A	J - Information and Communication	0.5%	United States
CHART INDUSTRIES INC 144A	C - Manufacturing	0.5%	United States
SUMMIT MIDSTREAM HOLDINGS LLC 144A	K - Financial and insurance activities	0.5%	United States
GLOBAL INFRASTRUCTURE SOLUTIONS IN 144A	F - Construction	0.5%	United States
CARNIVAL HOLDINGS (BERMUDA) LTD 144A	K - Financial and insurance activities	0.5%	Bermuda

O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 94.2% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 5.8% "Other" investments.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period is an average of the four calendar quarter ends.

In which economic sectors were the investments made?

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	8.1%
C - Manufacturing	15.6%
D - Electricity, gas, steam and air conditioning supply	4.9%
E - Water supply; sewerage; waste management and remediation activities	0.1%
F - Construction	1.6%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	5.1%
H - Transporting and storage	10.9%
I - Accommodation and food service activities	0.5%

J - Information and communication	12.8%
K - Financial and insurance activities	19.4%
L - Real estate activities	3.9%
M - Professional, scientific and technical activities	0.6%
N - Administrative and support service activities	7.0%
O - Public administration and defence; compulsory social security	0.7%
P - Education	0.0%
Q - Human health and social work activities	3.6%
R - Arts, entertainment and recreation	2.3%
S - Other services activities	0.3%
None	2.5%

O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman InnovAsia 5G Fund (the “Portfolio”)

Legal entity identifier: 549300VMISY5R7FEHX25

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("GHG") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: C G:2.5	ES: A-D G: 1-4	96%
Third-Party Data	4.7	1-10	

With regards to the NB ESG Quotient rating, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“CVaR”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 8.0% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment

Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 89% and this is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Rating	Data	Combined Coverage
Range	ES: A-D G: 1-4	0-10		0-100%
2022 reference period	ES: C G: 2.2	4.3		86%

2023 reference period	ES:C G: 2.5	4.7	96%
------------------------------	----------------	-----	-----

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, the NB ESG Quotient G rating has declined and the third-party data rating has improved. This may be due to an improvement in individual companies according to the third-party data provider, or due to differences in, the company's third-party rating by the provider.

Year-on-year, the combined coverage of the NB ESG Quotient and the third-party rating has improved. This is due to improvements in data coverage for individual companies held in the Portfolio and due to trading activity.

2. CVaR

	CVaR	Coverage
2022 reference period	-5.3%	87%
2023 reference period	-8.0%	89%

Year-on-year, the CVaR projection has moved due to improvements in data coverage for individual companies held in the Portfolio and trading activity within the Portfolio. As previously noted, the scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

3. Exclusions

	Total number of breaches
2022 reference period	0
2023 reference period	0

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the "PAIs") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Social and employee matters	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises</p> <p>PAI 12 - Unadjusted gender pay gap</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>
-----------------------------	--

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?” above.
2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):
- 3.

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
SK HYNIX INC	C - Manufacturing	4.0%	Korea (South), Republic of
HARMONIC DRIVE SYSTEMS INC	C - Manufacturing	3.7%	Japan

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 96.0% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio commits to holding at least 10% sustainable investments. During the Reference Period, the Portfolio held 27.4% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable

investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 4.0% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

In which economic sectors were the investments made?

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	69.5%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	3.5%
J - Information and communication	18.7%
K - Financial and insurance activities	1.3%

M - Professional, scientific and technical activities	2.4%
N - Administrative and support service activities	1.5%
P - Education	1.7%
None	1.3%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 24.8% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The Portfolio held 2.6% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive Innovative Technologies.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Japan Equity Engagement Fund (the “Portfolio”)

Legal entity identifier: 549300ELGQMFUUPHG878

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> with a social objective</div></div></div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). All Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we also have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB proprietary ESG score, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB proprietary ESG score:

As part of the investment process, the Sub-Investment Manager considered a variety of environmental and social characteristics as part of its scoring model. The Sub-Investment Manager applied a Neuberger Berman (“NB”) proprietary ESG score which was bespoke to the Japanese market. The NB proprietary ESG score also considered engagement potential as key components in its scoring model. The NB proprietary ESG score also considered the environmental and social characteristics identified in the NB materiality matrix, which is based on the Sustainability Accounting Standards Board (“SASB”) materiality framework. The NB materiality matrix focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector.

Foundational to the NB proprietary ESG score is the proprietary NB materiality matrix. The NB materiality matrix focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB proprietary ESG score assigned weightings to environmental, social and governance factors for each sector to derive an NB proprietary ESG score for companies held by the Portfolio. Companies with a favourable and/or an improving NB proprietary ESG score receive higher scores, which was a key area of consideration in raising the companies’ weight in the Portfolio. Conversely, companies with a poor NB proprietary ESG score, especially where a poor NB proprietary ESG score was not being addressed by a company, were more likely to receive lower scores that could result in reducing the companies’ weight in the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with holding companies to support their efforts in addressing key issues the Sub-Investment Manager deemed critical to the company’s business fundamentals and long-term growth including material environment and social issues. The success of the Sub-Investment Manager’s constructive engagement efforts with issuers will depend on each of the issuer’s receptiveness and responsiveness to such engagement.

Reference Period	Rating	Range	Combined Coverage
NB Proprietary ESG Score	ES: 7.7 G: 7.7	ES: 1-15 G:1-15	98%
Third-Party Data	5.5	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

With regards to the NB proprietary ESG score, a separate rating between 1 and 15 is given for environmental and social (“**ES**”) ratings, and for Governance (“**G**”) ratings, where 15 is the highest rating, and 1 is the lowest rating. This Portfolio does not have a minimum NB proprietary ESG score to be attained by an issuer prior to investment.

The average NB proprietary ESG score is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or a portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 21.8% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends. This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for

further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 77% and this coverage is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the Neuberger Berman Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB proprietary ESG score and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB Proprietary ESG Score

	NB Proprietary ESG Score	Third-party Data Rating	Combined Coverage
Range	ES:1-15 G: 1-15	0-10	0-100%

2022 reference period	ES: 8.1 G: 8.5	5.1	100%
2023 reference period	ES: 7.7 G: 7.7	5.5	98%

Year-on-year, the NB proprietary ESG score has declined and the third-party data rating has improved. This may be due to an improvement in individual companies according to the third-party data provider, or due to differences in the company's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-20.7%	90%
2023 reference period	-21.8%	77%

Year-on-year, the CVaR projection has moved due to changes associated with companies held and trading activity within the Portfolio.

Year-on-year, the CVaR Portfolio coverage has declined. This decline is due to trading activity and data limitations. CVaR is not applied across all companies in the Portfolio and is instead limited to the issuers for which there is sufficient and reliable data.

3. Exclusions

Consistent with the previous calendar year, there were no breaches during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

N/A – the Portfolio did not commit to holding sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 – 31 December 2023

Largest investments	Sector	% Assets	Country
OKINAWA CELLULAR TELEPHONE	J - Information and Communication	5.0%	Japan
FP PARTNER INC	K - Financial and insurance activities	4.3%	Japan

PILOT CORP	C - Manufacturing	2.5%	Japan
YAMANASHI CHUO BANK LTD	K - Financial and insurance activities	2.2%	Japan
TRANSACTION LTD	C - Manufacturing	2.1%	Japan

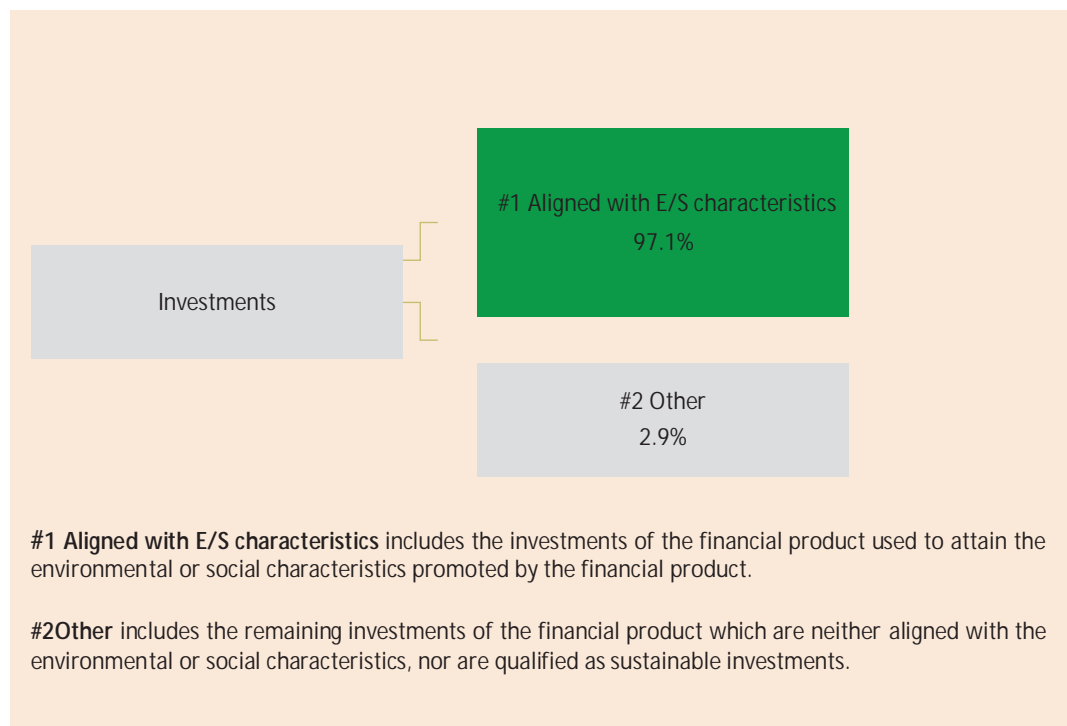

What was the proportion of sustainability-related investments?

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 97.1% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 2.9% "Other" investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB proprietary ESG score or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends..

Asset allocation describes the share of investments in specific assets.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets

0.8%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate), the NB Proprietary ESG score and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

For environment and social responsibility issues, the Sub-Investment Manager took a top-down approach, through the NB proprietary ESG score. The NB proprietary ESG score leveraged the NB materiality matrix to identify the sustainability factors that could have had a material impact on the sustainability of the company. The Sub-Investment Manager then scrutinized these issues with respect to the business model, value chain, growth phase of the company and competitive position to highlight high-priority issues that needed to be addressed immediately. This was done through on-the-ground research combing through years of publicly available company disclosure and through meetings with the company, competitors, suppliers, clients, and external research providers, where available.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process.

Once the Portfolio has invested in a company, the Sub-Investment Manager set an engagement objective and a customized strategy to address the financially material issues identified in the scoring process. The Sub-Investment Manager's engagement

with portfolio holdings was aimed at helping these companies achieve long-term growth. As long-term investors focused on bottom-up stock selection, the Sub-Investment Manager believed that through in-depth engagement on capital management, financially material environment and social issues, and corporate governance, they helped the company sustain a growth profile over the long-term that ultimately contributed to the Portfolio's performance. The Sub-Investment Manager's experience engaging with companies has shown that smaller companies require more time and resources to address these issues (average 2-3 years for environmental and social issues). Hence, given this relatively lengthy process, the Sub-Investment Manager adopted a milestone system to ensure engagement remains on track to achieve the objective.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – the Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Next Generation Mobility Fund (the “**Portfolio**”)

Legal entity identifier: 5493000YD3J3W1CMMU74

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 47.5%* of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with a social objective</div></div></div></div></div>
<div><div><div></div> It made sustainable investments with a social objective: ____%</div></div>	<div><div><div></div> It promoted E/S characteristics, but did not make any sustainable investments</div></div>

*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("GHG") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.3	ES: A-D G: 1-4	93%
Third-Party Rating	Data 7.1	0-10	

With regards to the NB ESG Quotient rating, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio’s aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio’s promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“CVaR”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security’s or portfolio’s market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 5.0% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 92% and this is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Rating	Combined Coverage
Range	ES: A-D G: 1- 4	0-10	0-100%
2022 reference period	ES: B G: 2.2	6.7	99%
2023 reference period	ES: B G: 2.3	7.1	93%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, the NB ESG Quotient G rating has declined and the third-party data rating has improved. This may be due to an improvement in individual companies according to the third-party data provider, or due to differences in, the company's third-party rating by the provider.

Year-on-year, the combined coverage of the NB ESG Quotient and the third-party rating has moved due to changes associated with companies held and trading activity within the Portfolio.

2. CVaR

	CVaR	Coverage
2022 reference period	-3.6%	93%
2023 reference period	-5.0%	92%

Year-on-year, the CVaR projection has moved due to changes associated with companies held and trading activity within the Portfolio.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and

- Revenue alignment to the Sustainable Development Goals (“SDGs”).

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB’s sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the “PAIs”) outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

- i. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?” above.
- ii. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 – GHG emissions PAI 2 – Carbon footprint PAI 3 – GHG intensity of investee companies PAI 4 – Exposure to companies active in the fossil fuel sector

Social and employee matters

PAI 10 – Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

PAI 13 – Board gender diversity

PAI 14 – Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
AMPHENOL CORP CLASS A	C - Manufacturing	3.8%	United States
ANSYS INC	J - Information and Communication	3.4%	United States
ANALOG DEVICES INC	C - Manufacturing	3.1%	United States
LINDE PLC	C - Manufacturing	3.0%	United States
CADENCE DESIGN SYSTEMS INC	J - Information and Communication	3.0%	United States
NVIDIA CORP	C - Manufacturing	3.0%	United States
TRIMBLE INC	J - Information and Communication	2.8%	United States
TE CONNECTIVITY LTD	C - Manufacturing	2.8%	United States
CATERPILLAR INC	C - Manufacturing	2.7%	United States
SCHNEIDER ELECTRIC	C - Manufacturing	2.6%	United States

ASML HOLDING ADR REPRESENTING NV	C - Manufacturing	2.6%	Netherlands
MONOLITHIC POWER SYSTEMS INC	C - Manufacturing	2.4%	United States
APPLIED MATERIAL INC	C - Manufacturing	2.4%	United States
T MOBILE US INC	J - Information and Communication	2.3%	United States
LATTICE SEMICONDUCTOR CORP	C - Manufacturing	2.2%	United States

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 92.9% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio commits to holding at least 10% sustainable investments. During the Reference Period, the Portfolio held 47.5% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 7.1% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	2.5%
C - Manufacturing	72.8%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.5%
J - Information and communication	19.8%
K - Financial and insurance activities	0.8%
L - Real estate activities	1.0%
M - Professional, scientific and technical activities	0.5%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 47.1% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The Portfolio held 0.4% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive the evolution of Next Generation Mobility.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Next Generation Space Economy Fund (the “Portfolio”)
Legal entity identifier: 549300FT24ZYHNJCVO63

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div><div>Yes</div></div> <div><div><div><div><div></div></div><div>It made sustainable investments with an environmental objective: ____%</div><div><div></div><div>in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div></div><div><div></div><div>in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div><div><div><div></div><div>It made sustainable investments with a social objective: ____%</div></div></div></div> <div><div><div></div><div>No</div></div><div><div><div><div><div></div></div><div>It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 31.0%* of sustainable investments</div><div><div></div><div>with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div></div><div><div></div><div>with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div><div><div></div><div>with a social objective</div></div></div></div><div><div><div></div><div>It promoted E/S characteristics, but did not make any sustainable investments</div></div></div></div></div>	

*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions*; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

*In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager will promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions¹. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and are reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● *How did the sustainability indicators perform?*

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-

¹Scope 1 emissions: are direct emissions from a company's owned or controlled sources (such as emissions created directly by the company's business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company's value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.6	ES: A-D G: 1-4	95%
Third-Party Data	6.5	0-10	

With regards to the NB ESG Quotient ratings, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio’s aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio’s promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“CVaR”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security’s or portfolio’s market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an

assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 7.1% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 94% and this is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; and the Neuberger Berman Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed

the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.7	6.2	97%
2023 reference period	ES: B G: 2.6	6.5	95%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged.

Year-on-year, the NB ESG Quotient G rating has improved. This is due to improvements in individual companies held in the Portfolio and due to trading activity.

Year-on-year, the third-party data rating has improved. This is due to improvements in individual companies held in the Portfolio and due to trading activity as well as potential changes to, or differences in, the company's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-4.0%	82%
2023 reference period	-7.1%	94%

Year-on-year, the CVaR projection has moved due to changes associated with companies held and trading activity within the Portfolio.

Year-on-year, CVaR Portfolio coverage has improved. This is due to improvements in data coverage for individual companies held in the Portfolio and due to trading activity.

3. Exclusions

	Total number of breaches
2022 reference period	0
2023 reference period	0

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the "PAIs") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage,. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

— — —

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — —

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.
2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the **"Product Level PAIs"**):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

The Product Level PAIs that were taken into consideration were subject to there being adequate, reliable and verifiable data coverage for such indicators. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("**NACE**") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
TELEDYNE TECHNOLOGIES INC	C - Manufacturing	4.4%	United States
INTELLIAN TECHNOLOGIES INC	C - Manufacturing	3.5%	Korea (South), Republic of
ROCKET LAB USA INC	C - Manufacturing	3.3%	United States
SAFRAN SA	C - Manufacturing	3.1%	France
QUALCOMM INC	C - Manufacturing	3.0%	United States
SINGAPORE TECHNOLOGIES ENGINEERING	C - Manufacturing	3.0%	Singapore
AIRBUS	C - Manufacturing	2.9%	France
TRANSDIGM GROUP INC	C - Manufacturing	2.7%	United States
TRIMBLE INC	J - Information and Communication	2.7%	United States
NVIDIA CORP	C - Manufacturing	2.6%	United States
ADVANCED MICRO DEVICES INC	C - Manufacturing	2.6%	United States
BOEING	C - Manufacturing	2.5%	United States
DEERE & CO	C - Manufacturing	2.5%	United States
AMAZON COM INC	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	2.3%	United States
MOTOROLA SOLUTIONS INC	C - Manufacturing	2.3%	United States

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 95.3% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio committed to holding at least 10% sustainable investments. During the Reference Period, the Portfolio held 31.0% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 4.7% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Asset allocation describes the share of investments in specific assets.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	68.0%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.4%
J - Information and communication	24.3%
K - Financial and insurance activities	1.7%
M - Professional, scientific and technical activities	3.5%

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?**

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 27.1% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Portfolio held 3.9% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive Next Generation Space Economy.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*

N/A

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

N/A

- *How did this financial product perform compared with the reference benchmark?*

N/A

- *How did this financial product perform compared with the broad market index?*

N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Responsible Asian Debt – Hard Currency Fund* (the “Portfolio”)

Legal entity identifier: 54930058PUF4SZOVOD17

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ ☒ No

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 48.0%** of sustainable investments***

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Effective 2 October 2023, the Neuberger Berman Asian Debt – Hard Currency Fund changed name to the Neuberger Berman Responsible Asian Debt – Hard Currency Fund.

**The Portfolio introduced a minimum sustainable investment commitment of 20% as of 2 October 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the Portfolio's holdings as of 31 December 2023 (as the only quarter end following the introduction of the sustainable investment commitment). The sustainable investment figures are not included in the Asset Allocation chart due to the inconsistent reference periods.

***Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for corporates:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; greenhouse gas (“**GHG**”) reduction programme; green procurement policy; and non-GHG air emissions programmes.

The Portfolio achieved a carbon emission intensity level that was at least 10% lower than the broader Asia debt investment universe, represented by the JP Morgan Asian Credit Index (Total Return, USD) (the “**Benchmark**”), until 2 October 2023. Following an increase to the reduction target (from 10% to 30%) from 2 October 2024 onwards, the Portfolio achieved a carbon emission intensity that was at least 30% lower than the broader Asia debt investment universe. The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes.

For the Reference Period, the Portfolio achieved a higher ESG score as compared to the broader Asia debt investment universe, represented by the Benchmark based on third-party ESG scores from an established external provider.

As of 2 October 2023, the Portfolio has aimed to align with a net zero goal. The Sub-Investment Manager promoted and will continue to promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions¹. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

¹ Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

The Reference Period is an average of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	59	1-100	100%
Third-Party Data	5.5	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy and from 2 October 2023, the Neuberger Berman Sustainable

Exclusion Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens.

In addition, the Portfolio excluded from the investment universe securities that were issued by issuers identified as being involved in direct child labour, derived 5% or more of revenues from the manufacture of tobacco products, as well as certain issuers with significant revenues from palm oil, adult entertainment, and nuclear power generation or, from 6 December 2023, companies that manufacture incendiary weapons using white phosphorus or that have an industry tie to nuclear weapons. Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

From 2 October 2023 onwards,

- (a) The Manager and the Sub-Investment Manager excluded securities issued by companies that derived 5% or more of revenue from:
 - the production of alcohol-related products;
 - the production of adult entertainment materials;
 - the production of conventional weapons;
 - the ownership or operation of gambling-related business activities; or
 - the production or distribution of palm oil.
- (b) The Manager and the Sub-Investment Manager excluded securities issued by companies identified as having ESG controversies (such as the negative ESG impact of the company's operations, products and/or services, non-compliance with international guidelines or safeguards (such as those captured by the Global Standards Policy)) or companies that raised serious concerns regarding their alignment with international guidelines or safeguards.
- (c) The Manager and the Sub-Investment Manager did not invest in sovereign issuers and/or 100% government owned entities which were identified by the Manager and the Sub-Investment Manager as having weak ESG practices. Such exclusions were based on a number of ESG criteria including the following:
 - Sovereign issuers which were ranked in the bottom decile based on the NB ESG Quotient, with no near term improvement prospects; or
 - Sovereign issuers where top officials had been sanctioned by the UN Security Council based on human rights violations; or
 - Sovereign issuers which were assessed as having poor and deteriorating human rights and rule of law metrics; or
 - Sovereign issuers which were non-compliant with the standard put forth by the OECD's Global Forum on Transparency and Exchange of Information for Tax Purposes, or sovereign issuers that were classified as a high risk jurisdiction subject to a call for action by the Financial Action Task Force ("**FATF**").

Through the above ESG exclusionary steps, the Manager and the Sub-Investment Manager excluded at least 20% of components of the investment universe.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-

Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual disclosure template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	59	5.6	97%
2023 reference period	59	5.5	100%

Year-on-year the NB ESG Quotient rating has remained unchanged.

Year-on-year the third-party data rating has moved due to changes associated with issuers held and trading activity within the Portfolio as well as potential changes to, or differences in, the issuer's third-party rating by the provider. As previously noted, the Manager and the Sub-Investment Manager will engage with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the NB ESG Quotient over time.

2. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG Exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, from 2 October 2023 onwards, the Portfolio committed to holding a minimum of 20% sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall good governance rating to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs")

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education.

Sustainable investments were more likely to have product/service revenue aligned with the SDGs.

Both the sustainable and non-sustainable investments held by the Portfolio targeted net zero alignment by 2050.

Consideration of revenue alignment, in the Manager's and the Sub-Investment Manager's subjective view, with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

From 2 October 2023 onwards, the Manager and the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager took into account the principal adverse impacts indicators outlined in Part 1 of the below table for corporate issuers (the “**Corporate Issuer PAIs**”) and the principal adverse impacts for sovereign issuers as outlined in Part 2 of the table below (the “**Sovereign PAIs**”) when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective (together the “**PAIs**”):

Part 1 – Corporate Issuer PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
<i>Environmental</i>	PAI 15 - GHG intensity
<i>Social</i>	PAI 16 - Investee countries subject to social violations

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for “sustainability” which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

— — —
How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio’s sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — —
Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. From 2 October 2023 onwards, all PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.
2. The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity

PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
INDONESIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security*	2.3%	Indonesia
PERTAMINA PT RegS	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	2.0%	Indonesia
INDONESIA REPUBLIC OF	O - Public administration and defence; compulsory social security*	1.2%	Indonesia
INDONESIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security*	1.2%	Indonesia
MONGOLIA (GOVERNMENT OF) RegS	O - Public administration and defence; compulsory social security*	1.1%	Mongolia
PERUSAHAAN LISTRIK NEGARA MTN RegS	O - Public administration and defence; compulsory social security*	0.9%	Indonesia
PHILIPPINES (REPUBLIC OF)	O - Public administration and defence; compulsory social security*	0.9%	Philippines
ENN CLEAN ENERGY INTERNATIONAL INV RegS	K - Financial and insurance activities	0.9%	China
STANDARD CHARTERED PLC RegS	K - Financial and insurance activities	0.8%	Hong Kong
SRI LANKA GOVERNMENT BOND RegS	O - Public administration and defence; compulsory social security*	0.8%	Sri Lanka
RENEW POWER PVT LTD RegS	D - Electricity, gas, steam, and air conditioning supply	0.8%	India
MEDCO BELL PTE LTD RegS	K - Financial and insurance activities	0.8%	Indonesia

EXPORT-IMPORT BANK OF KOREA	K - Financial and insurance activities	0.7%	Korea (South), Republic of
STANDARD CHARTERED PLC RegS	K - Financial and insurance activities	0.7%	Hong Kong
SRI LANKA (DEMOCRATIC SOCIALIST RE	O - Public administration and defence; compulsory social security*	0.7%	Sri Lanka

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.

What was the proportion of sustainability-related investments?

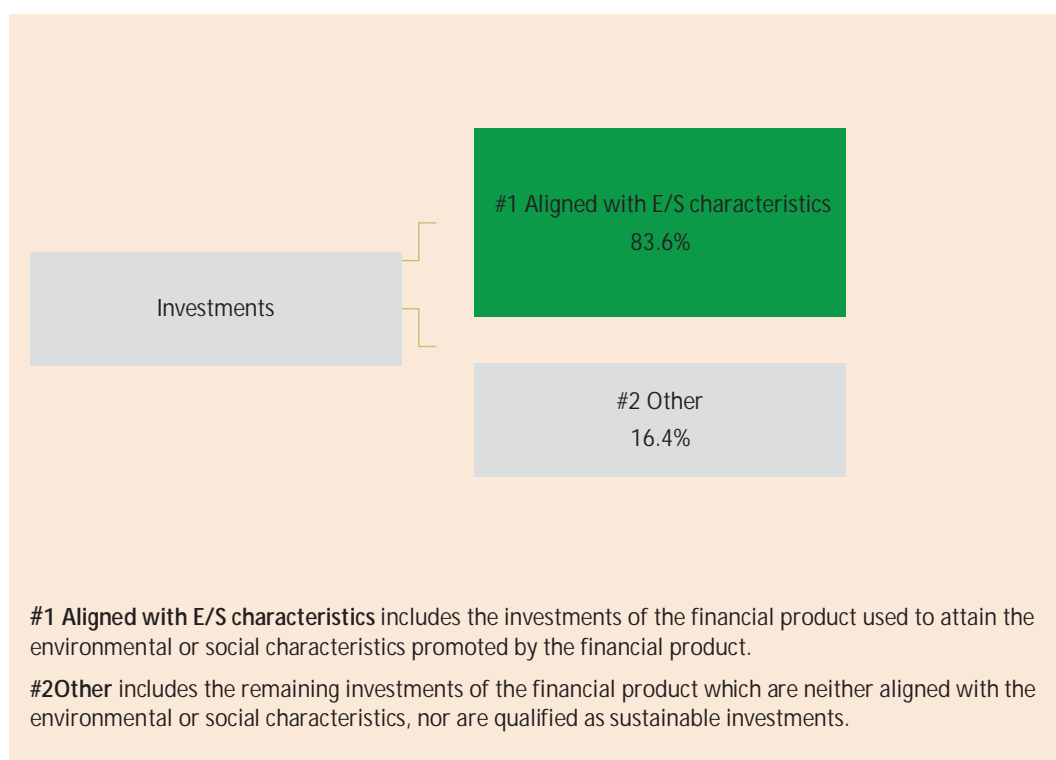

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 83.6% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio introduced a minimum sustainable investment commitment of 20% as of 2 October 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the Portfolio's holdings as of 31 December 2023 (as the only quarter following the introduction of the sustainable investment commitment). The Portfolio held 48% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 16.4% "Other" investments.

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The reference period for the below data is an average of the four 2023 quarter

ends with the exception of the sustainable investment commitment, which for this reference period only was prepared based on the Portfolio's holdings as of 31 December 2023.

The Sustainable Investment percentage as of 31 December 2023 is 48.0%, which contained 38.7% sustainable investments with an environmental objective not aligned with the EU Taxonomy and 9.3% socially sustainable investments. The Portfolio did not commit to holding Taxonomy-aligned investments.

● *In which economic sectors were the investments made?*

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	1.0%
C - Manufacturing	8.2%
D - Electricity, gas, steam and air conditioning supply	6.5%
F - Construction	2.1%

G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.6%
H - Transporting and storage	2.3%
I - Accommodation and food service activities	0.7%
J - Information and communication	3.3%
K - Financial and insurance activities	50.9%
M - Professional, scientific and technical activities	0.9%
N - Administrative and support service activities	2.1%
O - Public administration and defence; compulsory social security*	14.7%
R - Arts, entertainment and recreation	1.5%
None	1.3%

**O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?

☐ Yes:

In fossil gas

In nuclear energy

No

² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio introduced a minimum sustainable investment commitment of 20% as of 2 October 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the Portfolio's holdings as of 31 December 2023 (as the only quarter end following the introduction of the sustainable investment commitment). As of 31 December 2023, the Portfolio held 38.7% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The Portfolio introduced a minimum sustainable investment commitment of 20% as of 2 October 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the Portfolio's holdings as of 31 December 2023 (as the only quarter end following the introduction of the sustainable investment commitment). As of 31 December 2023, the Portfolio held 9.3% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Manager and the Sub-Investment Manager view ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Manager's and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager's and the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Short Duration Emerging Market Debt Fund (the “Portfolio”)

Legal entity identifier: 549300J30SXW5866TW70

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 36.5%* of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with a social objective</div></div></div></div></div>
<div><div><div></div> It made sustainable investments with a social objective: ____%</div></div>	<div><div><div></div> It promoted E/S characteristics, but did not make any sustainable investments</div></div>

*Please refer to the “What was the proportion of sustainability-related investments?” question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- **Environmental Characteristics:** sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas (“GHG”) emissions; air and household pollution; and unsafe sanitation.
- **Social Characteristics:** progress towards UN Sustainable Development Goals (“SDGs”); health and education levels; regulatory quality; political stability and freedoms; gender equality; and research & development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.
- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for countries and for corporate sectors to derive the NB ESG Quotient rating. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	56	1-100	98%
Third-Party Data	4.5	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. From 6 December 2023, the Manager and the Sub-Investment Manager excluded companies from the investment universe that manufactured incendiary weapons using white phosphorus or that had an industry tie to nuclear weapons. From 6 December 2023, the Manager and the Sub-Investment Manager excluded securities issued by companies that derived 5% or more of revenue from the production of adult entertainment materials, or the production of conventional weapons. The Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. Furthermore, the investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). In addition, the Portfolio excluded securities issued by issuers which derived 5% or more of revenues from the manufacture of tobacco products. Issuers which were involved in direct child labour and issuers that derived more than 10% of revenue from oil sands extraction were also excluded.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought

to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Rating Data	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	55	4.2	95%
2023 reference period	56	4.5	98%

Year-on-year, the NB ESG Quotient rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity.

Year-on-year, the third-party data rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity as well as potential changes to, or differences in, the issuer's third-party rating by the provider.

2. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the UN Sustainable Development Goals ("**SDGs**").

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager and the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that caused significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the “**PAIs**”) and the principal adverse impacts for sovereign issuers (as outlined in Part 2 of the table set out in the “*How did this financial product consider principal adverse impacts on sustainability factors?*” section below) (the “**Sovereign PAIs**”) when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards. The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs and Sovereign PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “*How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*” above.
2. The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the “**Corporate Issuer PAIs**”) and considered the Sovereign PAIs as outlined below in Part 2 for sovereign issuers when considering the principal adverse impacts on sustainability factors (together the “**Product Level PAIs**”):

Part 1 – Corporate Issuer PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 13 - Board gender diversity
Part 2 – Sovereign PAIs	
<i>Environmental</i>	PAI 15 - GHG intensity
<i>Social</i>	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s and the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
SERBIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security*	1.7%	Serbia, Republic
REPUBLIC OF COLOMBIA	O - Public administration and defence; compulsory social security*	1.5%	Colombia
SOUTHERN GAS CORRIDOR CJSC RegS	H - Transportation and storage	1.2%	Azerbaijan
BRAZIL MINAS SPE RegS	K - Financial and insurance activities	1.2%	Brazil
ANGOLA GOVERNMENT BOND RegS	O - Public administration and defence; compulsory social security*	1.1%	Angola
PETROLEOS MEXICANOS	B - Mining and Quarrying	1.0%	Mexico
QNB FINANCE LTD MTN RegS	K - Financial and insurance activities	1.0%	Qatar
EASTERN AND SOUTHERN AFRICAN TRADE MTN RegS	U - Activities of extraterritorial organisations and bodies	1.0%	Supranational
COLOMBIA GOVERNMENT BOND	O - Public administration and defence; compulsory social security*	0.9%	Colombia
SAUDI ARABIAN OIL CO MTN RegS	B - Mining and Quarrying	0.9%	Saudi Arabia
KOREA MINE REHABILITATION AND MINE RegS	B - Mining and Quarrying	0.9%	Korea (South), F of
SASOL FINANCING USA LLC	K - Financial and insurance activities	0.8%	South Africa
ARAB REPUBLIC OF EGYPT MTN RegS	O - Public administration and defence; compulsory social security*	0.8%	Egypt
DOMINICAN REPUBLIC RegS	O - Public administration and defence; compulsory social security*	0.8%	Dominican Re
ROMANIA (REPUBLIC OF) MTN RegS	O - Public administration and defence; compulsory social security*	0.7%	Romania

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.

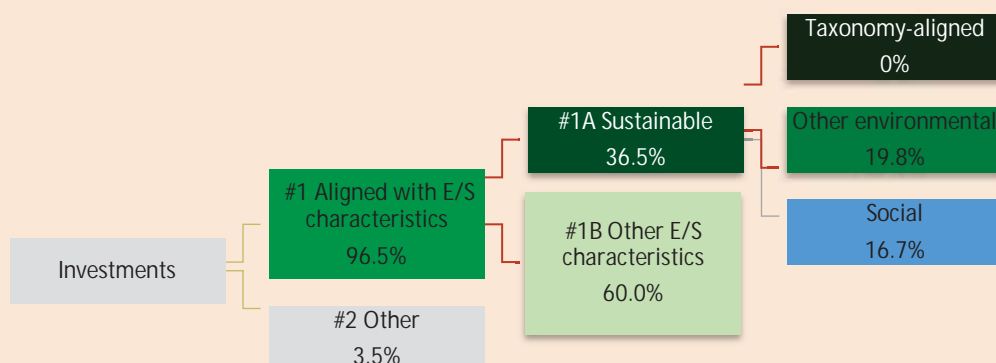

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 96.5% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio committed to holding at least 10% sustainable investments. During the 2023 Reference Period, the Portfolio held 36.5% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 3.5% “Other” investments.

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	9.1%
C - Manufacturing	2.7%
D - Electricity, gas, steam and air conditioning supply	3.6%
E - Water supply; sewerage; waste management and remediation activities	0.0%
F - Construction	0.8%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.4%
H - Transporting and storage	2.7%
I - Accommodation and food service activities	0.6%
J - Information and communication	0.3%
K - Financial and insurance activities	48.9%
L - Real estate activities	0.7%
M - Professional, scientific and technical activities	0.1%
N - Administrative and support service activities	0.6%
O - Public administration and defence; compulsory social security*	27.2%

R - Arts, entertainment and recreation	0.7%
U - Activities of extraterritorial organisations and bodies	1.3%
None	0.2%

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

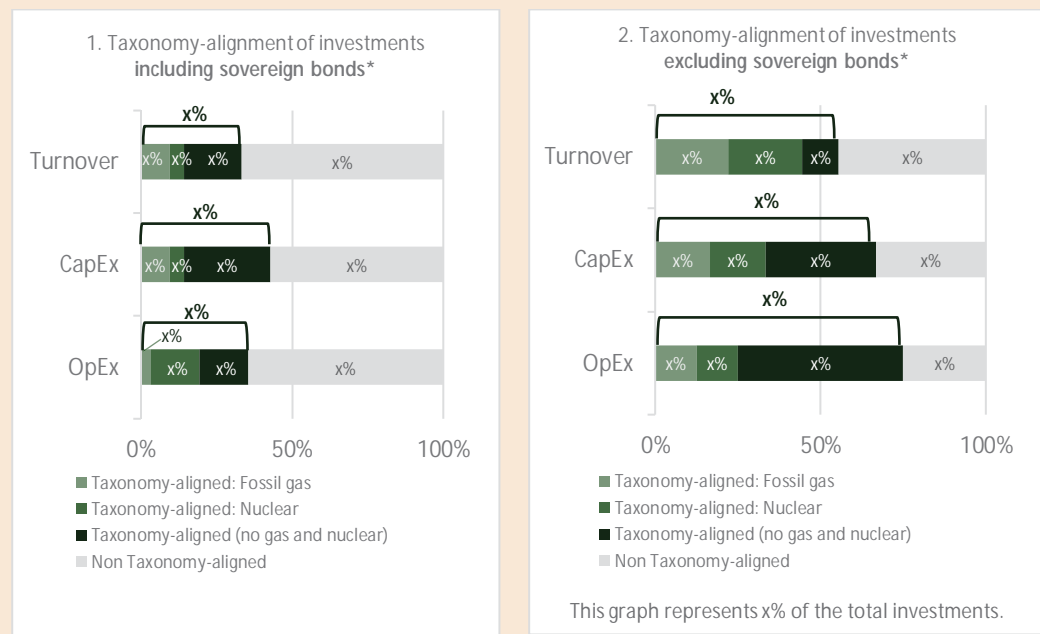

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 19.8% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The Portfolio held 16.7% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Manager and the Sub-Investment Manager view ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Short Duration High Yield SDG Engagement Fund (the “Portfolio”)

Legal entity identifier: 5493009EN8Z7034TFP15

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made sustainable investments with an environmental objective: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective: ____%

No

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 28.8%* of sustainable investments**

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

*The Portfolio introduced a minimum sustainable investment commitment of 10% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of 2023 (as the only quarter ends following the introduction of the sustainable investment commitment). The sustainable investment figures are not included in the Asset Allocation chart due to the inconsistent reference periods.

**Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for

these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio sought to promote the achievement of the United Nations Sustainable Development Goals ("SDGs") by engaging with at least 90% of corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer), on incremental actions that they can take within their products, services, operations or processes which are aligned with these goals (or where there is potential for increased alignment with these goals, following engagement with these companies).

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas ("GHG") emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager promoted and continues to promote, the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions,¹ to meet the Portfolio's ambition to deliver a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions.

- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

For the Reference Period, the Sub-Investment Manager maintained an average ESG rating for the Portfolio that was above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which was assessed based on third-party ESG ratings from an established external provider. The Reference Period is an average of the four calendar quarter ends. The Portfolio was actively managed, the ICE BofA U.S. High Yield Index was used exclusively for ESG rating comparison purposes and carbon intensity reduction comparison purposes only.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

¹ Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary NB materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were excluded from the Portfolio.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	57	1-100	100%
Third-Party Data	5.6	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 and 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Engagement reporting:

As mentioned above, the Sub-Investment Manager contributed towards the achievement of the SDGs by engaging with at least 90% of corporate issuers (held for at least 12 months as of 31 December 2023).

In addition, below the Sub-Investment Manager has included a summary of its engagement efforts during the 2023 calendar year.

The Sub-Investment Manager engaged with 161 companies held by the Portfolio in the Reference Period.
54% of the Sub-Investment Manager's engagements were direct one-to-one engagements (either remotely or in-person).
51% of the Sub-Investment Manager's engagements were with CEO / CFO level staff.
15 of the total 17 the UN Sustainable Development Goals (" SDGs ") were covered by the Sub-Investment Manager's engagement objectives.
22% of companies engaged with over the Reference Period have either fully achieved their engagement objective or have taken partial action towards achieving their engagement objective.

Further information on the Sub-Investment Manager's engagement efforts can be found in the Portfolio's Engagement Report [here](#).

3. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("**CVaR**") measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 11.6% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 59% and this has been calculated based on the average of the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

4. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; and the Neuberger Berman Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities were identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Portfolio excluded issuers that were involved in controversial activities and behaviours, such as fur manufacturers, gambling or nuclear power.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	57	5.3	100%
2023 reference period	57	5.6	100%

Year-on-year, the NB ESG Quotient rating has remained unchanged and the third-party data rating has improved. This may be due to an improvement in individual issuers according to the third-party data provider, or due to differences in the issuer's third-party rating by the provider.

2. Engagement Reporting

	Companies engaged with	% of the engagements were direct one-to-one engagements (either remotely or in-person)	% of the engagements were with CEO / CFO level staff	Number of SDGs covered (out of 17)	% of companies engaged with that have either fully achieved their engagement objective or have taken partial action towards achieving their engagement objective
2022 reference period	114	65%	48%	14	16%
2023 reference period	161	54%	51%	15	22%

3. CVaR

	CVaR	Coverage
2022 reference period	-12.4%	60%
2023 reference period	-11.6%	59%

Year-on-year, the CVaR projected loss has improved. This is due to improvements in individual corporate issuers held in the Portfolio and due to trading activity.

4. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective during the reference period. From 2 August 2023 onwards, the Portfolio committed to holding a minimum threshold of 10% sustainable investments. The sustainable investments promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall good governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the SDGs

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

From 2 August 2023 onwards, the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the “**PAIs**”) when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for “sustainability” which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio’s sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?” above.
2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions
	PAI 2 - Carbon footprint
	PAI 3 - GHG intensity of investee companies
	PAI 4 - Exposure to companies active in the fossil fuel sector

<i>Social and employee matters</i>	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>
------------------------------------	--

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the above Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 – 31 December 2023

Largest investments	Sector	% Assets	Country
XHR LP 144A	L - Real estate activities	1.3%	United States
AVIENT CORP 144A	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	1.0%	United States
GEN DIGITAL INC 144A	J - Information and Communication	1.0%	United States
STANDARD INDUSTRIES INC (DELAWARE) 144A	C - Manufacturing	1.0%	United States
APX GROUP INC 144A	K - Financial and insurance activities	0.9%	United States
SOLARIS MIDSTREAM HOLDINGS LLC 144A	H - Transportation and storage	0.9%	United States
AMERICAN AIRLINES INC 144A	H - Transportation and storage	0.9%	United States
PERFORMANCE FOOD GROUP INC 144A	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	0.9%	United States
GENESIS ENERGY LP	B - Mining and Quarrying	0.9%	United States
TRIVIUM PACKAGING FINANCE BV 144A	K - Financial and insurance activities	0.9%	Netherlands

PARK INTERMEDIATE HOLDINGS LLC 144A	K - Financial and insurance activities	0.8%	United States
ASSURED PARTNERS INC 144A	K - Financial and insurance activities	0.8%	United States
AMERICAN AIRLINES INC 144A	H - Transportation and storage	0.8%	United States
RLJ LODGING TRUST LP 144A	L - Real estate activities	0.8%	United States
CAMELOT RETURN MERGER SUB INC 144A	N - Administrative and support service activities	0.8%	United States

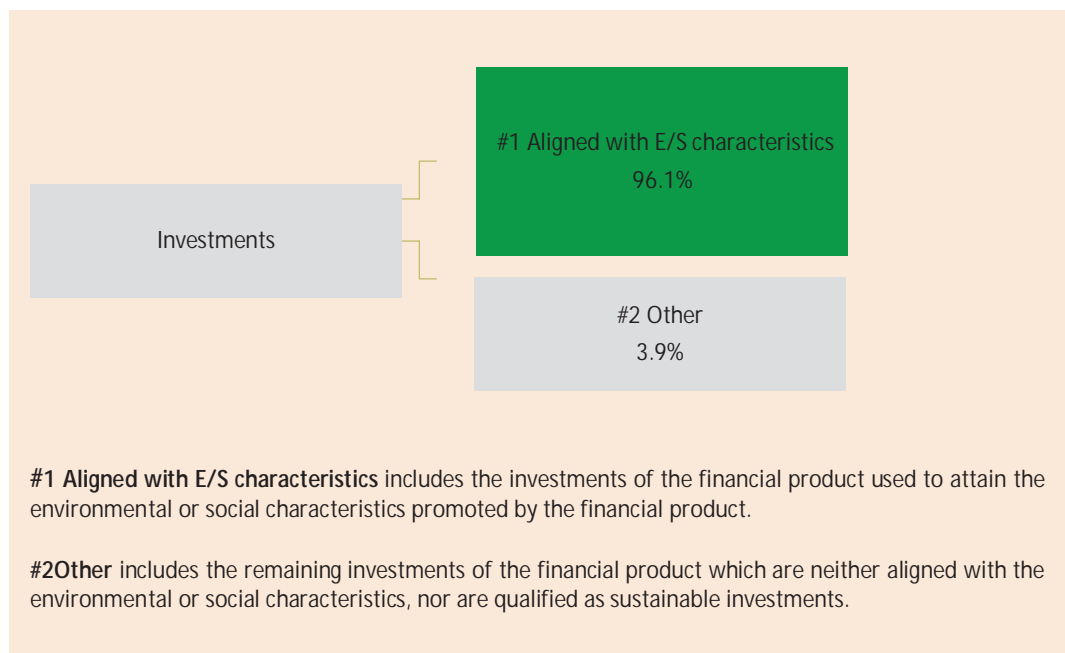

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 96.1% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio introduced a minimum sustainable investment commitment of 10% as of 2 August 2023. The sustainable investment disclosure in this periodic report has therefore been prepared based on the Portfolio's holdings as an average of the third and fourth quarter ends of the Reference Period (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 28.8% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio. During the Reference Period, the Portfolio held 3.9% "Other" investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period for the below data is an average of the four calendar quarter ends with the exception of the sustainable investment commitment, which for this Reference Period only was prepared based on the average of the third and fourth quarter ends.

The Sustainable Investment percentage as of an average of the third and fourth quarter ends of 2023 is 28.8%, which contained 17.5% sustainable investments with an environmental objective not aligned with the EU Taxonomy and 11.3% socially sustainable investments. The Portfolio did not commit to holding Taxonomy-aligned investments.

● *In which economic sectors were the investments made?*

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	7.0%
C - Manufacturing	17.8%
D - Electricity, gas, steam and air conditioning supply	2.6%
E - Water supply; sewerage; waste management and remediation activities	0.5%
F - Construction	2.7%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	6.3%
H - Transporting and storage	9.7%
I - Accommodation and food service activities	0.4%
J - Information and communication	13.7%
K - Financial and insurance activities	19.4%
L - Real estate activities	4.2%
M - Professional, scientific and technical activities	1.0%
N - Administrative and support service activities	7.4%
Q - Human health and social work activities	3.2%
R - Arts, entertainment and recreation	1.3%
S - Other services activities	0.0%
None	2.8%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio introduced a minimum sustainable investment commitment of 10% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of the Reference Period (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 17.5% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Portfolio introduced a minimum sustainable investment commitment of 10% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of the Reference Period (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 11.3% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international

environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process.

This program was focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same were monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker (see Engagement section above for further details).

The Portfolio:

- Sought to promote the achievement of the SDGs by aiming to engage with at least 90% of corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer) on incremental actions that they could take within their products, services, operations or processes which were aligned with these goals (or where there is potential for increased alignment with these goals, following engagement with these corporate issuers).
- Maintained an average ESG rating for the Portfolio that was above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which was assessed based on third-party ESG ratings from an established external provider. This calculated was based on the Portfolio's ESG rating at each of the four calendar quarter ends in the Reference Period.

The Sub-Investment Manager used an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the **"Engagement Potential Indicator"**). The Engagement Potential Indicator, on a scale of 1-5, provided a systematic evaluation of an issuer's willingness and ability to engage with the Sub-Investment Manager on the SDGs. For example, an issuer determined to be unwilling or unable to engage received an Engagement Potential Indicator of "1", whereas an issuer willing to engage on becoming a leader in contributing to the SDGs received an Engagement Potential Indicator of "5". The Sub-Investment Manager prioritised investments in issuers with an Engagement Potential Indicator rating between "2" and "5". The Engagement Potential Indicator considered a diverse set of factors including the relevance of the SDGs to an issuer's business operations, an issuer's disclosure practices and the Sub-Investment Manager's relationship with the issuer, in addition to the financial constraints of the issuers.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

How does the reference benchmark differ from a broad market index?

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Strategic Income Fund (the “Portfolio”)

Legal entity identifier: 549300RBLDK0PHH13M43

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with a social objective</div></div></div></div></div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
------------------	--------	-------	-------------------

NB ESG Quotient	71	1-100	48%
Third-Party Data	6.0	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends. With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 8.7% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had

sufficient and reliable data. The Portfolio had a CVaR coverage of 20% and this is an average of the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio also excluded corporate debt issuers in Emerging Market Countries that were involved in the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the Portfolio's SFDR pre-contractual template).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Rating	Data	Combined Coverage
Range	1-100	0-10		0-100%
2022 reference period	72	5.7		66%
2023 reference period	71	6.0		48%

Year-on-year, the NB ESG Quotient rating has declined and the third-party data rating has improved. This may be due to an improvement in individual issuers according to the third-party data provider, or due to differences in the issuer's third-party rating by the provider.

Year-on-year, the combined coverage of the NB ESG Quotient and the third-party rating has declined. The ESG analysis is performed internally, with the support of third-party data, and is not outsourced. The Sub-Investment Manager makes assessments on these ESG characteristics on a continuous basis. For a short period of time, at the point of investment, an issuer may not be assigned an NB ESG Quotient rating. The Sub-Investment Manager have periodic engagements with third-party ESG data vendors to discuss issues such as data coverage and will evaluate options to help resolve data gaps. Subscription to multiple third-party ESG data vendors enables the Sub-Investment Manager to evaluate third-party data coverage and quality of data between third-party ESG vendors. In addition, the Sub-Investment Manager continue to explore new third-party ESG data products and vendors to evaluate potential enhancements to our existing third-party ESG data coverage.

2. CVaR

	CVaR	Coverage
2022 reference period	-10.2%	33%
2023 reference period	-8.7%	20%

Year-on-year, the CVaR projected loss has improved. This is due to improvements in individual corporate issuers held in the Portfolio and due to trading activity.

Year-on-year, the CVaR Portfolio coverage has declined. This decline is due to trading activity and data limitations. CVaR is not applied across all corporate issuers in the Portfolio and is instead limited to the issuers for which there is sufficient and reliable data.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the "**Sovereign PAIs**") on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
<i>Environmental</i>	PAI 15 - GHG intensity
<i>Social</i>	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("**NACE**") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
TREASURY (CPI) NOTE	O - Public administration and defence; compulsory social security*	3.0%	United States
UMBS 30YR TBA(REG A)	N/A	1.9%	United States
UMBS 30YR TBA(REG A)	N/A	1.7%	United States
UMBS 30YR TBA(REG A)	N/A	1.6%	United States
TREASURY NOTE	O - Public administration and defence; compulsory social security*	1.5%	United States
UMBS 30YR TBA(REG A)	N/A	1.4%	United States
UMBS 30YR TBA(REG A)	N/A	1.3%	United States
TREASURY NOTE	O - Public administration and defence; compulsory social security*	1.2%	United States
TREASURY NOTE	O - Public administration and defence; compulsory social security*	1.1%	United States
UMBS 30YR TBA(REG A)	N/A	1.0%	United States
UMBS 30YR TBA(REG A)	N/A	1.0%	United States
TREASURY NOTE	O - Public administration and defence; compulsory social security*	1.0%	United States
TREASURY NOTE	O - Public administration and defence; compulsory social security*	1.0%	United States
UMBS 30YR TBA(REG A)	N/A	1.0%	United States
UMBS 30YR TBA(REG A)	N/A	1.0%	United States

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 60% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 85.5% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 40% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 14.5% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
A - Agriculture, forestry and fishing	0.0%
B - Mining and quarrying	1.4%
C - Manufacturing	5.2%
D - Electricity, gas, steam and air conditioning supply	1.8%
E - Water supply; sewerage; waste management and remediation activities	0.0%
F - Construction	0.2%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.3%
H - Transporting and storage	2.4%
I - Accommodation and food service activities	0.2%
J - Information and communication	4.2%
K - Financial and insurance activities	15.2%
L - Real estate activities	0.9%
M - Professional, scientific and technical activities	0.3%
N - Administrative and support service activities	1.1%
O - Public administration and defence; compulsory social security*	14.1%
P - Education	0.1%
Q - Human health and social work activities	0.5%
R - Arts, entertainment and recreation	0.5%
S - Other services activities	0.1%
U - Activities of extraterritorial organisations and bodies	0.0%
None	50.7%

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives, any to-be-announced security (“**TBA**”) or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Sustainable Asia High Yield Fund (the “Portfolio”)

Legal entity identifier: 5493005FAT85HZ73DG37

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div>	<div><div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 63.2%* of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with a social objective</div></div></div></div></div></div>

*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the "Reference Period"). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage, carbon emissions, opportunities in clean technologies, water stress, toxic emissions & waste, financing environmental impact, product carbon footprint, environmental policy, environmental management system, greenhouse gas (“GHG”) reduction programme, green procurement policy and non-GHG air emissions programmes.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager promoted and will continue to promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions¹. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

Over the Reference Period, the Portfolio achieved a carbon emission intensity level that was at least 30% lower than that of the broader Asia high yield debt investment universe, represented by the J.P. Morgan Asian Credit High Yield Index (the “Index”). The average carbon emission intensity was measured and calculated based on the Portfolio's carbon emission intensity struck at each of the four calendar quarter ends in the Reference Period. The Portfolio is actively managed and did not intend to track the Index which is included here for carbon emission intensity reduction and ESG comparison purposes.

Over the Reference Period, the Portfolio achieved a higher ESG score as compared to the broader Asia high yield debt investment universe, represented by the Index, based on third-party ESG scores from an established external provider.

- **Social Characteristics:** health & safety, human capital development, labour management, privacy & data security, product safety & quality, financial products safety, discrimination policy, community involvement programmes, diversity programmes and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

¹ Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio.

The Sub-Investment Manager excluded issuers with a poor NB ESG Quotient rating unless there was reasonable expectation that the NB ESG Quotient rating would improve over time.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	56	1-100	100%
Third-Party Data	5.4	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; Neuberger Berman Sustainable Exclusion Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application

of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). Additionally, issuers which were involved in, direct child labour and the tobacco industry were excluded.

From 6 December 2023, the Portfolio excluded issuers from the investment universe that manufactured incendiary weapons using white phosphorus or that had an industry tie to nuclear weapons. The Sub-Investment Manager also excluded securities issued by companies that derived 5% or more of revenue from the production of adult entertainment materials, or the production of conventional weapons.

From 6 December 2023, the Portfolio did not invest in debt securities and money market instruments issued by sovereign or 100% government-owned issuers which were identified by the Sub-Investment Manager as having weak ESG practices and such issuers were excluded from the Portfolio. Such exclusions were based on a number of ESG criteria including the following:

- Sovereign issuers which were ranked in the bottom decile based on the NB ESG Quotient, with no near term improvement prospects; or
- Sovereign issuers which were excluded from the J.P. Morgan ESG EMBI Global Diversified Index based on ESG considerations; or
- Sovereign issuers where top officials had been sanctioned by the UN Security Council based on human rights violations; or
- Sovereign issuers which were assessed as having high and increasing greenhouse gas intensity levels; or
- Sovereign issuers which were non-compliant with the standard put forth by the OECD's Global Forum on Transparency and Exchange of Information for Tax Purposes, or
- sovereign issuers that were classified as a high risk jurisdiction subject to a call for action by the Financial Action Task Force ("**FATF**")

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	55	4.2	95%
2023 reference period	56	5.4	100%

Year-on-year, the NB ESG Quotient rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity.

Year-on-year, the third-party data rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity as well as potential changes to, or differences in, the issuer's third-party rating by the provider.

Year-on-year, the combined coverage of the NB ESG Quotient and the third-party rating has improved. This is due to improvements in data coverage for individual issuers held in the Portfolio and due to trading activity.

2. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the UN Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs, in the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that caused significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio

<i>Social and employee matters</i>	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises</p> <p>PAI 12 - Unadjusted gender pay gap</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>
------------------------------------	--

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?” above.
2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector

<i>Social and employee matters</i>	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>
------------------------------------	--

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 – 31 December 2023

Largest investments	Sector	% Assets	Country
GREENKO POWER II LIMITED RegS	K - Financial and insurance activities	4.0%	India
SANDS CHINA LTD	R - Arts, entertainment and recreation	3.5%	Macau
STANDARD CHARTERED PLC RegS	K - Financial and insurance activities	2.7%	Hong Kong
GLOBE TELECOM INC RegS	J - Information and Communication	2.4%	Philippines
MELCO RESORTS FINANCE LTD RegS	R - Arts, entertainment and recreation	2.4%	Macau
STUDIO CITY FINANCE LTD RegS	K - Financial and insurance activities	2.3%	Macau
MELCO RESORTS FINANCE LTD RegS	R - Arts, entertainment and recreation	2.3%	Macau
CONTINUUM ENERGY LEVANTER PTE LTD RegS	K - Financial and insurance activities	2.1%	India
NETWORK I2I LTD RegS	J - Information and Communication	2.1%	India
WYNN MACAU LTD RegS	I - Accommodation and food service activities	1.9%	Macau
RENEW POWER PVT LTD RegS	D - Electricity, gas, steam, and air conditioning supply	1.8%	India

JSW HYDRO ENERGY LTD RegS	D - Electricity, gas, steam, and air conditioning supply	1.8%	India
ADANI GREEN ENERGY UP LTD RegS	D - Electricity, gas, steam, and air conditioning supply	1.7%	India
STAR ENERGY GEOTHERMAL WAYANG WIND RegS	D - Electricity, gas, steam, and air conditioning supply	1.7%	Indonesia
SRI LANKA DEMOCRATIC SOCIALIST RE RegS	O - Public administration and defence; compulsory social security*	1.7%	Sri Lanka

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.

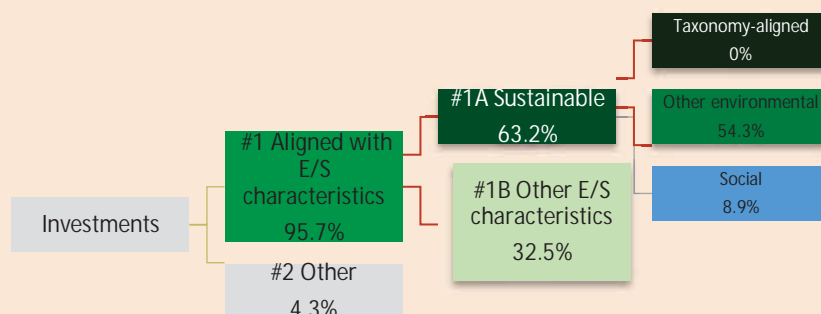

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 95.7% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio committed to holding at least 50% sustainable investments. During the 2023 Reference Period, the Portfolio held 63.2% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 4.3% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	4.9%
D - Electricity, gas, steam and air conditioning supply	10.2%
F - Construction	5.5%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.9%
I - Accommodation and food service activities	5.0%
J - Information and communication	4.7%
K - Financial and insurance activities	50.9%
M - Professional, scientific and technical activities	1.4%
O - Public administration and defence; compulsory social security*	6.3%
R - Arts, entertainment and recreation	9.2%
None	1.0%

**O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.*

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 54.3% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The Portfolio held 8.9% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was an important component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Sustainable Emerging Market Corporate Debt Fund (the “Portfolio”)

Legal entity identifier: 549300GFVSJXLSLRQ502

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 51.6%* of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div></div> with a social objective</div></div></div>

*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; greenhouse gas ("GHG") reduction programme; green procurement policy; and non-GHG air emissions programmes.

In aiming to align the Portfolio with a net zero goal, the Manager and the Sub-Investment Manager promoted and will continue to promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions¹. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

The Portfolio achieved a carbon emission intensity level that was at least 30% lower than the broader Emerging Market Countries corporate debt investment universe, represented by the J.P. Morgan CEMBI Diversified (USD) index (the "Index") (excluding securities issued by non-corporate issuers, which include public or quasi-public issuers (i.e. sovereign issuers), and cash or cash equivalents) ("Excluded Securities"). The Reference Period data was calculated by averaging the data of the four calendar quarter ends. The Portfolio was actively managed and did not track the Index which was included here for carbon emission intensity reduction and ESG comparison purposes.

For the Reference Period, the Portfolio achieved a higher ESG score (as assigned by a third-party data provider) as compared to the broader Emerging Markets corporate debt investment universe, represented by the Index.

- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "NB ESG Quotient"), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

¹ Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	60	1-100	100%
Third-Party Data	5.6	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; and the Neuberger Berman Sustainable Exclusion Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that use thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. From 6 December 2023, the Portfolio also excluded companies from the investment universe that manufacture incendiary weapons using white phosphorus or that had an industry tie to nuclear weapons. The Portfolio excluded securities issued by companies that derived 5% or more of revenue from the production of adult entertainment materials. Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global

Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). In addition, the Portfolio excluded securities issued by issuers which derived 5% or more of revenues from the manufacture of tobacco products or the production of conventional weapons. Issuers which were involved in direct child labour and issuers that derived more than 10% of revenue from oil sands extraction were also excluded.

From 6 December 2023, the Portfolio did not invest in debt securities and money market instruments issued by sovereign or 100% government-owned issuers which were identified by the Manager and the Sub-Investment Manager as having weak ESG practices and such issuers were excluded from the Portfolio. Such exclusions were based on a number of ESG criteria including the following:

- Sovereign issuers which were ranked in the bottom decile based on the NB ESG Quotient, with no near term improvement prospects; or
- Sovereign issuers which were excluded from the J.P. Morgan ESG EMBI Global Diversified Index based on ESG considerations; or
- Sovereign issuers where top officials had been sanctioned by the UN Security Council based on human rights violations; or
- Sovereign issuers which were assessed as having high and increasing greenhouse gas intensity levels; or
- Sovereign issuers which were non-compliant with the standard put forth by the OECD’s Global Forum on Transparency and Exchange of Information for Tax Purposes, or sovereign issuers that were classified as a high risk jurisdiction subject to a call for action by the Financial Action Task Force (“**FATF**”).

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators’ quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	59	5.5	98%

2023 reference period	60	5.6	100%
------------------------------	----	-----	------

Year-on-year, the NB ESG Quotient rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity.

Year-on-year, the third-party data rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity as well as potential changes to, or differences in, the issuer's third-party rating by the provider.

2. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the UN Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager and the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "PAIs") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Manager's and Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards. The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not

cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

- I. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.
- II. The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the **"Product Level PAIs"**):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;

- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities ("**NACE**") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
ROMANIA (REPUBLIC OF) MTN RegS	O - Public administration and defence; compulsory social security*	1.4%	Romania
COTE D'IVOIRE (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security*	1.2%	Cote D'Ivoire
SANDS CHINA LTD	R - Arts, entertainment and recreation	1.0%	Macau
WYNN MACAU LTD RegS	I - Accommodation and food service activities	0.9%	Macau
TSMC ARIZONA CORP	C - Manufacturing	0.9%	Taiwan (Republic of Chi
TSMC GLOBAL LTD RegS	K - Financial and insurance activities	0.9%	Taiwan (Republic of Chi
MELCO RESORTS FINANCE LTD RegS	R - Arts, entertainment and recreation	0.8%	Macau
KOSMOS ENERGY LTD RegS	B - Mining and Quarrying	0.7%	Ghana

*O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● *What was the asset allocation?*

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 96.7% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio committed to holding at least 50% sustainable investments. During the 2023 Reference Period, the Portfolio held 51.6% sustainable investments.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 3.3% “Other” investments.

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	10.1%
C - Manufacturing	13.2%
D - Electricity, gas, steam and air conditioning supply	2.7%
F - Construction	0.9%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.3%

H - Transporting and storage	1.8%
I - Accommodation and food service activities	1.4%
J - Information and communication	4.6%
K - Financial and insurance activities	51.8%
L - Real estate activities	0.6%
M - Professional, scientific and technical activities	0.7%
N - Administrative and support service activities	1.6%
O - Public administration and defence; compulsory social security*	5.7%
R - Arts, entertainment and recreation	2.9%
U - Activities of extraterritorial organisations and bodies	0.2%
None	0.4%

**O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies*

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio held 34.0% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The Portfolio held 17.6% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Manager and the Sub-Investment Manager view ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Sustainable Emerging Market Debt – Hard Currency Fund (the "Portfolio")

Legal entity identifier: 549300OWRIKGBWGY0X93

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div><div><div><div></div></div><div><div></div></div></div><div>Yes</div></div>	<div><div><div></div><div></div><div></div></div><div><div><div></div></div><div><div></div></div></div><div>No</div></div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the "Reference Period"). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

To what extent was the sustainable investment objective of this financial product met?

The Portfolio invested in securities issued by those issuers that contributed to environmental and social objectives. Issuers were assessed against the sustainable investment objective by reference to the parameters outlined below.

Environmental Objective

The Sub-Investment Manager targeted investment in issuers which demonstrated better income-adjusted advancement in climate change adaptation and mitigation, reducing greenhouse gas (“**GHG**”) emissions, ecosystem vitality and net zero alignment.

Sovereign issuer objectives:

Countries in the top 25th percentile or improving in the next 25th percentile in the sovereign climate transition risk indicator (which is proprietary to the Sub-Investment Manager and combined data focused on climate risk mitigation, climate adaptation, ecosystem vitality, GHG emissions and net zero alignment) were considered to be aligned to the environmental objective.

Net zero commitments and targets were set in the expectation that governments followed through on their own commitments to ensure that the objectives of the Paris Agreement were met, including increasing the ambition of their Nationally Determined Contributions (“**NDCs**”).

Corporate issuer objectives:

The Sub-Investment Manager intends to reduce the Portfolio's carbon footprint for corporate securities across scope 1, 2, and material scope 3 GHG emissions, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions.¹ There is no annual reduction target, instead the reduction target focuses on the 2030 milestone and the 2050 net zero goal.

Social Objective

The Sub-Investment Manager targeted investment in issuers which demonstrated better income-adjusted progress in achieving the UN Sustainable Development Goals (“**SDGs**”), with a particular focus on public health and education.

Countries in the top 25th percentile or improving in the next 25th percentile in the sovereign sustainable development indicator (which is proprietary to the Sub-Investment Manager and combined data focused on life expectancy, access to vaccination and medical professionals, secondary education and lower income equality) were considered to be aligned to the social objective.

The Portfolio met its sustainable investment objective. Performance in relation to the sustainable investment objective was measured through the sustainability indicators and is reported, in aggregate, below.

¹ Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● *How did the sustainability indicators perform?*

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the attainment of the sustainable investment objectives of the Portfolio. These sustainability indicators are listed below:

i. Independent third-party reports and assessments:

The Sub-Investment Manager used the following third party reports, indexes and assessments to measure the Portfolio's progress towards achieving its sovereign sustainable investment objectives:

Advancement in UN Sustainable Development Goals, with emphasis on climate change adaptation and mitigation:

- Notre Dame Global Adaptation Initiative Country Index ("**ND-GAIN**")

The Sub-Investment Manager used the ND-GAIN index to measure and assess a country's vulnerability to climate change and climate transition risks.

The Sub-Investment Manager focused its assessment on income-adjusted climate change adaptation.

- GHG Sovereign Emissions:

The Sub-Investment Manager tracked sovereign GHG Territorial Emissions defined as tons of CO2 emissions of Purchasing Power Parity ("**PPP**")-adjusted GDP (Territorial Production Emissions) or per Capita (Territorial Consumption Emissions). Issuers with the highest Territorial Production Emissions – defined as top quartile and increasing – were excluded from the Portfolio.

- Environmental Performance Index

The Sub-Investment Manager tracked income-adjusted ecosystem vitality data from the Environmental Performance Index, a joint project of the Yale Center for Environmental Law & Policy and The Center for International Earth Science Information Network ("**CIESIN**") at Columbia University's Earth Institute. The indicator measured how well countries are preserving, protecting, and enhancing ecosystems and the services they provide. It is made up of six issue categories: Biodiversity & Habitat, Ecosystem Services, Fisheries, Acid Rain, Agriculture, and Water Resources.

- Net Zero Alignment - GermanWatch's Climate Change Performance Index ("**CCPI**") and Climate Action Tracker

The Sub-Investment Manager tracked sovereign bonds issuing country's net-zero alignment according to CCPI and the Climate Action Tracker's measurement of national and global efforts towards mitigating global warming. This allowed the Sub-Investment Manager to target countries with Net Zero commitments by 2050 or earlier.

Advancement in UN Sustainable Development Goals, with emphasis on public health, secondary education and tackling income inequality:

- Sustainable Development Report Index

The Sub-Investment Manager used the Bertelsmann Stiftung and the Sustainable Development Solutions Network Sustainable Development Report Index to assess country performance on the SDGs. This allowed the Sub-Investment Manager to target investment in issuers which demonstrated better progress in achieving the SDGs. Countries that meet the environmental or social goals also need to be in the top 75th percentile of the Sustainable Development Report Index to be considered sustainable.

- UNDP Human Development Index

The Sub-Investment Manager used the UNDP Human Development Index to measure achievements in key dimensions of life expectancy, education and income inequality globally, adjusted for income.

This allowed the Sub-Investment Manager to target investment in issuers which demonstrated better progress in achieving human development.

- World Health Organisation – The Global Health Observatory

The Sub-Investment Manager used income-adjusted Global Health Observatory data on vaccination coverage (diphtheria tetanus toxoid) and pertussis (“**DTP3**”) immunization coverage among 1-year-olds, and the number of medical doctors per capita.

Top Performers or Top Improvers held by the Portfolio

The above listed independent third-party reports and assessments were aggregated to identify “Top Performers” (countries in the top 25th percentile which were aligned with the Portfolio's environmental and/or social objectives) or “Top Improvers” (countries improving in the next 25th percentile which were aligned and are aligning further towards the Portfolio's sovereign environmental and/or social objectives).

Only emerging market sovereign issuers which met the Portfolio's sovereign environmental and/or social objectives, and which were classified as a Top Performer or Top Improver were held by the Portfolio. The classification of countries as a Top Performer or Top Improver is indicative of the Portfolio meeting its sovereign environmental and social objectives.

ii. ESG exclusions:

To ensure that the sustainable investment objective of the Portfolio was attained, the Portfolio did not invest in securities issued by issuers whose activities were identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; or the Neuberger Berman Enhanced Sustainable Exclusion Policy.

In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. On 6 December 2023 onwards, the Portfolio also excluded companies from the investment universe that manufactured incendiary weapons using white phosphorus or that had an industry tie to nuclear weapons. The Portfolio also excluded securities issued by companies that derived 5% or more of revenue from the production of adult entertainment materials; or the production of conventional weapons.

Investments held by the Portfolio did not invest in securities issued by issuers whose activities have been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

Additionally, the Sub-Investment Manager excluded securities issued by corporate issuers that were rated worst in terms of the NB ESG Quotient² from the investment universe.

Furthermore, the Sub-Investment Manager excluded sovereign issuers which were assessed as having weak and deteriorating human rights metrics and where top officials have been sanctioned by the UN Security Council based on human rights violations, or sovereign issuers which were assessed as having high and increasing greenhouse gas intensity levels, or sovereign issuers which were non-compliant with the standard put forth by the OECD's Global Forum on Transparency and Exchange of Information for Tax Purposes, or sovereign issuers that were classified as a high risk jurisdiction subject to a call for action by the Financial Action Task Force (“**FATF**”).

² The NB ESG Quotient is a proprietary NB ESG rating system built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

At least 20% of the investment universe were excluded on these bases.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

i. Independent third-party reports and assessments

During the Reference Period the following notable changes from the previous reference period occurred:

- Two additional countries were considered to be environmentally sustainable thanks to advancements towards net zero alignment;
- Three additional countries were considered to be environmentally sustainable due to advancements in income-adjusted climate adaptation and the introduction of the economic vitality metric;
- Four countries were no longer considered environmentally sustainable due to weak income-adjusted ecosystem vitality;
- One country was no longer considered environmentally sustainable due to worsening income-adjusted climate adaptation and GHG emission intensity;
- Two additional countries were considered socially sustainable due to income adjustment, and new health and income inequality metrics;
- One additional country was considered to be socially sustainable due to income adjustment and new health metrics;
- One additional country was considered to be socially sustainable due to lower GHG emission intensity;
- Two countries were no longer considered socially sustainable due to income adjustment, and new health and income inequality metrics;
- One country is no longer considered to be socially sustainable due to new health and income inequality metrics;
- One country is no longer considered to be socially sustainable due to the income inequality metric; and
- Two additional countries were no longer considered to be environmentally or socially sustainable due to high and deteriorating GHG emissions.

ii. ESG exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment would cause significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective. In respect of sovereign issuers (which made up the majority of the Portfolio) these are detailed in the first section of the table below ("**Sovereign PAIs**") and those in respect of corporate issuers ("**Corporate Issuer PAIs**") in the second section (together the "**PAIs**"):

PAIs	
Theme	Adverse sustainability indicator
Part 1 - Sovereign PAIs	
<i>Environmental</i>	PAI 15 - GHG intensity of investee countries
<i>Social</i>	PAI 16 - Investee countries subject to social violations
Part 2 - Corporate Issuer PAIs	
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment

Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers, in particular where they fell below the quantitative and qualitative tolerance thresholds set for the relevant PAIs by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant PAIs by the Sub-Investment Manager; and
- Application of the NB ESG exclusion policies detailed above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, identified through the Neuberger Berman Global Standards Policy.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Investment Manager considered the impacts of the PAIs on sustainability factors.

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

With respect to the Portfolio, consideration of the PAIs by the Sub-Investment Manager, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant PAI by the Sub-Investment Manager;

- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant by the Sub-Investment Manager; and
- Application of the NB ESG exclusion policies detailed above, which included consideration of several of the PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 – 31 December 2023

Largest investments	Sector	% Assets	Country
OMAN GOVERNMENT BOND MTN RegS	O - Public administration and defence; compulsory social security*	2.9%	Oman
CHILE (REPUBLIC OF)	O - Public administration and defence; compulsory social security*	2.9%	Chile
ARGENTINA REPUBLIC OF GOVERNMENT	O - Public administration and defence; compulsory social security*	2.7%	Argentina
ROMANIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security*	2.5%	Romania
REPUBLIC OF PERU	O - Public administration and defence; compulsory social security*	2.5%	Peru
DOMINICAN (GOVERNMENT) RegS REPUBLIC	O - Public administration and defence; compulsory social security*	2.3%	Dominican Republic

*O - Public administration and defence; compulsory social security can be either Barclays Industry: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The Portfolio aims to hold a minimum of 80% sustainable investments. During the Reference Period, the Portfolio held 93.8% sustainable investments.

The Portfolio aims to hold a maximum of 20% investments that are not sustainable investments and which fall into the “Not Sustainable” section of the Portfolio. During the Reference Period, the Portfolio held 6.2% “Not Sustainable” investments.

The calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third party data. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● *In which economic sectors were the investments made?*

The Reference Period data has been calculated based on the average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	2.2%
H - Transporting and storage	1.1%
J - Information and communication	0.1%
K - Financial and insurance activities	3.6%
O - Public administration and defense; compulsory social security*	90.7%
U - Activities of extraterritorial organizations and bodies	0.9%
None	1.5%

*O - Public administration and defence; compulsory social security can be either Barclays Industry: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy³?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Portfolio held 56.9% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Portfolio held 36.9% socially sustainable investments.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

“Not Sustainable” included the remaining investments (including but not limited to any derivatives listed in the Supplement for the Portfolio) of the Portfolio which did not qualify as sustainable investments.

The “Not Sustainable” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt were necessary for the proper functioning of the Portfolio such as ensuring adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its sustainable investment objective.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Portfolio was managed in-line with the sustainable investment objective and the following actions were taken:

i. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager viewed ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considered ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the sustainable objective of the Portfolio using (as appropriate) independent third-party reports and assessments, the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions).

The sovereign sustainability development indicator, which is proprietary to the Sub-Investment Manager, assessed sovereign issuers' advancement of climate change adaptation and mitigation, reducing GHG emissions and net zero alignment, and in achieving the SDGs, with a particular focus on public health and education.

The Sub-Investment Manager also conducted ongoing analysis of ESG factors by generating and utilising NB ESG Quotient ratings for issuers to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings could be increased or decreased based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's sustainable investment objective and the Portfolio's portfolio construction activities.

Issuers with a favourable NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where these were not being addressed by that issuer, were not included in the Portfolio.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	53	1-100	98%
Third-Party Data	4.3	0-10	

The Reference Period data has been calculated based on the average of the four calendar quarter ends. With regards to the NB ESG Quotient, a rating between 1 – 100 is used where 1 is lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of the sustainable investment objective, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

The Sub-Investment Manager did not invest in sovereign issuers which were identified by the Sub-Investment Manager as having weak ESG practices. Such exclusions were based on a number of ESG criteria including the following:

- Sovereign issuers which were ranked in the bottom decile based on the NB ESG Quotient, with no near-term improvement prospects; or
- Sovereign issuers which were excluded from the Benchmark based on ESG considerations; or
- Sovereign issuers where top officials had been sanctioned by the UN Security Council based on human rights violations; or
- Sovereign issuers which were assessed as having high and increasing GHG intensity levels; or
- Sovereign issuers which were assessed as having poor and deteriorating human rights and rule of law metrics; and
- Sovereign issuers which were non-compliant with the standard put forth by the OECD's Global Forum on Transparency and Exchange of Information for Tax Purposes, or sovereign issuers that are classified as a high risk jurisdiction subject to a call for action by the FATF.

ii. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

iii. ESG sectoral exclusion policies:

To ensure that the sustainable investment objective of the Portfolio was attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference sustainable benchmark?

N/A - The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- *How does the reference benchmark differ from a broad market index?*
N/A
 - *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*
N/A
 - *How did this financial product perform compared with the reference benchmark?*
N/A
 - *How did this financial product perform compared with the broad market index?*

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Ultra Short Term Euro Bond Fund (the “**Portfolio**”)

Legal entity identifier: 5493005BLB45DI1FOM10

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made sustainable investments with an environmental objective: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective: ____%

No

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 16.6%* of sustainable investments**

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

*The Portfolio introduced a minimum sustainable investment commitment of 5% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of 2023 (as the only quarter ends following the introduction of the sustainable investment commitment). The sustainable investment figures are not included in the Asset Allocation chart due to the inconsistent reference periods.

**Please refer to the “What was the proportion of sustainability-related investments?” question below for further detail in respect of the Portfolio’s asset allocation (including its exposure to sustainable investments). The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Reference Period	Rating	Range	Combined coverage
NB ESG Quotient	63	1-100	90%
Third-Party Data	6.8	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends. With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for corporate issuers. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per issue and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much an issue may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 5.3% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 52% and this is an average of the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). Additionally, the Portfolio was prohibited from purchasing the securities of issuers that were involved in tobacco production such as cigars, cigarettes, e-cigarettes, smokeless tobacco, dissolvable and chewing tobacco. This also included issuers that grow or process raw tobacco leaves.

When applying ESG exclusions to the Portfolio, the Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual templates).

The below sustainability indicators’ quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	62	6.5	87%
2023 reference period	63	6.8	90%

Year-on-year, the NB ESG Quotient rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity.

Year-on-year, the third-party data rating has improved. This is due to improvements in individual issuers held in the Portfolio and due to trading activity as well as potential changes to, or differences in, the issuer's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-5.3%	52%
2023 reference period	-5.3%	52%

Year-on-year the CVaR projection has remained unchanged.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective during the reference period. From 2 August 2023 onwards, the Portfolio committed to holding a minimum threshold of 5% sustainable investments. The sustainable investments promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall good governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs")

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

From 2 August 2023 onwards, the Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager took into account the following principal adverse impacts indicators outlined in the below table (the "PAIs") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
<i>Biodiversity</i>	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
<i>Water</i>	PAI 8 - Emissions to water
<i>Waste</i>	PAI 9 - Hazardous waste and radioactive waste ratio
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Consideration of the PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

— — —

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — —

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's assessment of issuers) throughout the Reference Period.

The Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in “How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?” above.
2. The Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions
	PAI 2 - Carbon footprint
	PAI 3 - GHG intensity of investee companies
	PAI 4 - Exposure to companies active in the fossil fuel sector

<i>Social and employee matters</i>	<p>PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises</p> <p>PAI 13 - Board gender diversity</p> <p>PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)</p>
------------------------------------	--

Consideration of the Product Level PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager has used the EU statistical classification of economic activities ("**NACE**") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
INTESA SANPAOLO SPA MTN RegS	K - Financial and insurance activities	1.69%	Italy
DPF 21-2 A RegS	N/A	1.43%	Netherlands
MYLAN NV RegS	C - Manufacturing	1.42%	United States
LANDSBANKINN HF RegS	K - Financial and insurance activities	1.25%	Iceland
SUMITOMO MITSUI BANKING CORPORATIO RegS	K - Financial and insurance activities	1.24%	Japan
BANK OF NOVA SCOTIA RegS	K - Financial and insurance activities	1.20%	Canada
MIRAV_19-1 A RegS	N/A	1.19%	Spain
FEDERATION DES CAISSES DESJARDINS RegS	K - Financial and insurance activities	1.12%	Canada
ATHENE GLOBAL FUNDING RegS	K - Financial and insurance activities	1.05%	United States
BANQUE FEDERATIVE DU CREDIT MUTUEL MTN	K - Financial and insurance activities	1.02%	France
MORGAN STANLEY MTN	K - Financial and insurance activities	1.00%	United States
WIZZ AIR FINANCE COMPANY BV MTN RegS	K - Financial and insurance activities	0.98%	Switzerland
AMCO ASSET MANAGEMENT COMPANY SPA MTN RegS	K - Financial and insurance activities	0.96%	Italy
HOLCIM FINANCE LUX SA	C - Manufacturing	0.91%	Switzerland
GOLDMAN SACHS GROUP INC/THE MTN RegS	K - Financial and insurance activities	0.90%	United States

What was the proportion of sustainability-related investments?

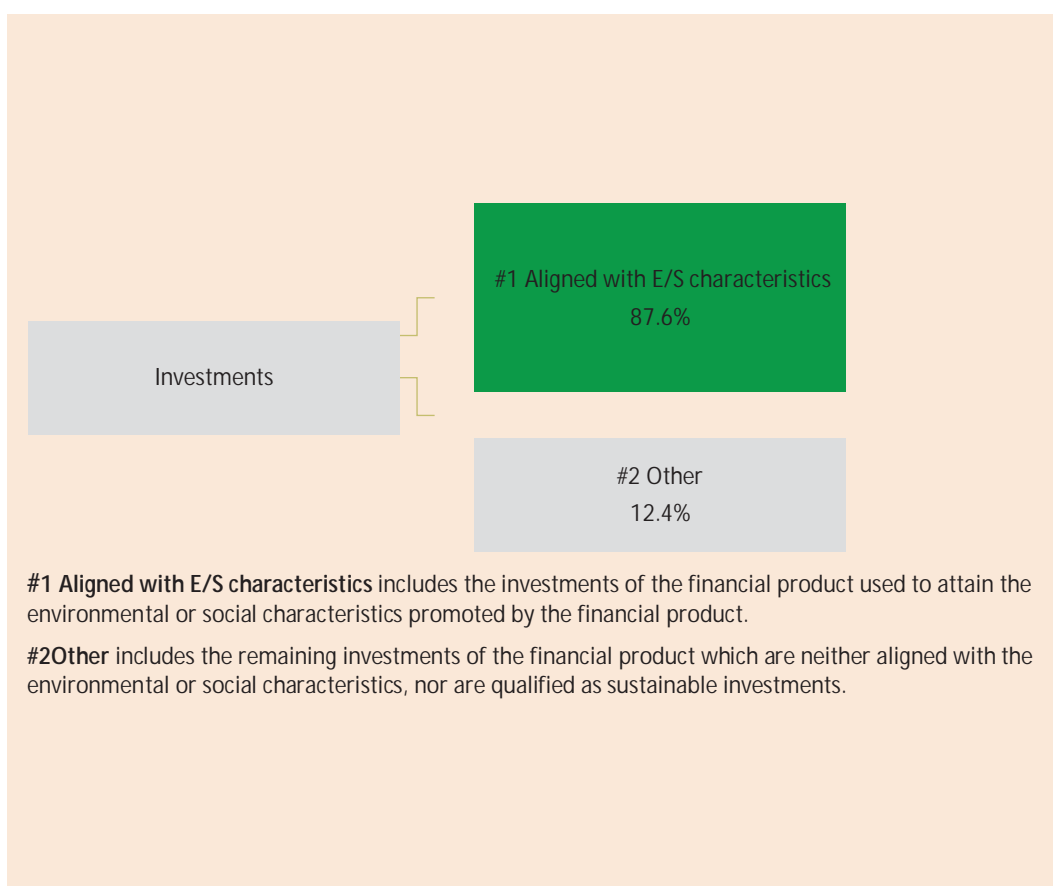

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

- The Portfolio aims to hold a minimum of 70% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 87.6% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio introduced a minimum sustainable investment commitment of 5% as of 2 August 2023. The sustainable investment disclosure in this periodic report has therefore been prepared based on the average of the third and fourth quarter ends of 2023 (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 16.6% sustainable investments.

- The Portfolio aims to hold a maximum of 30% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 12.4% “Other” investments.

The Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period for the below data is an average of the four 2023 quarter ends with the exception of the sustainable investment commitment, which for this reference period only was prepared based on the average of the third and fourth quarter ends of 2023.

The Sustainable Investment percentage as an average of the third and fourth quarter ends of 2023 was 16.6%, which contained 12.6% sustainable investments with an environmental objective not aligned with the EU Taxonomy, and 4.0% socially sustainable investments. The Portfolio did not commit to holding Taxonomy-aligned investments.

● *In which economic sectors were the investments made?*

The Reference Period for the below data is an average of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	8.2%
D - Electricity, gas, steam and air conditioning supply	2.2%
E - Water supply; sewerage; waste management and remediation activities	0.3%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.5%
H - Transporting and storage	1.7%
I - Accommodation and food service activities	0.1%
J - Information and communication	2.0%
K - Financial and insurance activities	64.6%
L - Real estate activities	5.0%
N - Administrative and support service activities	3.7%
O - Public administration and defence; compulsory social security*	6.3%
R - Arts, entertainment and recreation	0.7%
U - Activities of extraterritorial organisations and bodies	0.7%
None	4.0%

**O - Public administration and defence; compulsory social security is classified by Barclays Industry as either: Sovereign, Treasury, Foreign Local Government, Supranational, Foreign Agencies*

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

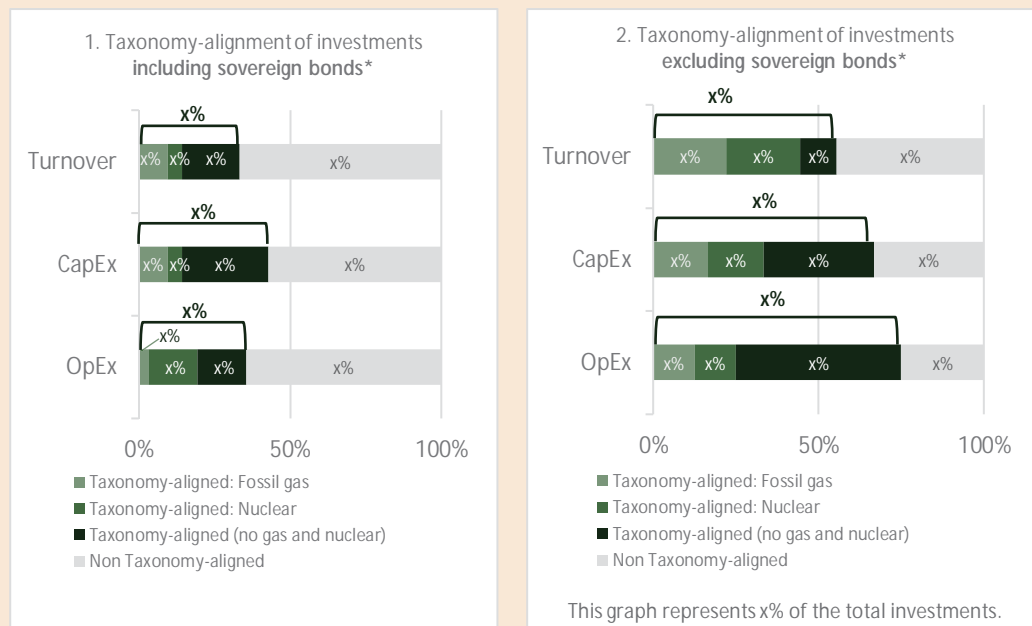

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio introduced a minimum sustainable investment commitment of 5% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of 2023 (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 12.6% sustainable investments with an environmental objective not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The Portfolio introduced a minimum sustainable investment commitment of 5% as of 2 August 2023. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the average of the third and fourth quarter ends of 2023 (as the only quarter ends following the introduction of the sustainable investment commitment). The Portfolio held 4.0% socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Equity Fund (the “Portfolio”)

Legal entity identifier: 549300GF328Y6TQJI517

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div><div>Yes</div></div>	<div><div><div></div><div></div><div></div></div><div>No</div></div>
<div><div><div></div><div>It made sustainable investments with an environmental objective: ____%</div></div><div><div><div></div><div>in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div></div><div><div><div></div><div>in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div></div>	<div><div><div></div><div>It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</div></div><div><div><div></div><div>with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div></div><div><div><div></div><div>with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div><div><div><div></div><div>with a social objective</div></div></div></div></div></div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Companies with a favourable and/or an improving NB ESG Quotient or third-party rating had a higher chance of being included in the Portfolio. Companies with a poor NB ESG Quotient or third-party rating, especially where a poor NB ESG Quotient or third-party rating was not being addressed by a company, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager continues to monitor companies with a sub-par or poor NB ESG Quotient or third party rating to understand how they are mitigating/improving upon said ESG concerns.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.1	ES: A-D G: 1-4	97%
Third-Party Data	6.6	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("ES") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("G") ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("CVaR") measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 6.8% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for

further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 96% and this coverage is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Rating	Data	Combined Coverage
Range	ES: A-D G: 1-4	0-10		0-100%
2022 reference period	ES: B G: 2.2	6.6		100%

2023 period	reference	ES: B G: 2.1	6.6	97%
------------------------	------------------	-----------------	-----	-----

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, however the NB ESG Quotient G rating has improved. The third-party data rating remained unchanged. This is due to changes associated with companies held and trading activity, as well as due to differences in the company's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-5.7%	91%
2023 reference period	-6.8%	96%

Year-on-year, the CVaR projection has moved due to improvements in data coverage for individual companies held in the Portfolio and changes associated with companies held and trading activity within the Portfolio.

Year-on-year, CVaR Portfolio coverage has improved. This is due to improvements in data coverage for individual companies held in the Portfolio and due to trading activity.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
MICROSOFT CORP	J - Information and Communication	9.2%	United States
AMAZON COM INC	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	5.3%	United States
APPLE INC	C - Manufacturing	4.8%	United States
ALPHABET INC CLASS A	J - Information and Communication	4.5%	United States
META PLATFORMS INC CLASS A	J - Information and Communication	3.8%	United States
UNITEDHEALTH GROUP INC	K - Financial and insurance activities	3.5%	United States
NVIDIA CORP	C - Manufacturing	3.3%	United States
SALESFORCE INC	J - Information and Communication	3.3%	United States
VISA INC	K - Financial and insurance activities	2.5%	United States
MASTERCARD INC	K - Financial and insurance activities	2.4%	United States
SERVICENOW INC	J - Information and Communication	2.4%	United States
TJX INC	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	2.2%	United States
WORKDAY INC	J - Information and Communication	2.2%	United States
MCDONALDS CORP	I - Accommodation and food service activities	2.1%	United States
ADOBE INC	J - Information and Communication	2.1%	United States

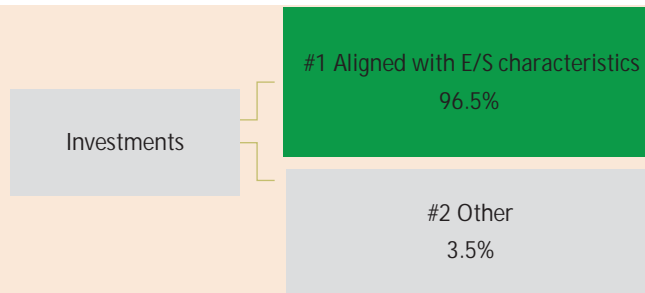

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 96.5% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 3.5% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	22.6%
D - Electricity, gas, steam, and air conditioning supply	2.0%
E - Water supply; sewerage; waste management and remediation activities	1.6%

G - Wholesale and retail trade; repair of motor vehicles and motorcycles	13.7%
H - Transporting and storage	1.5%
I - Accommodation and food service activities	2.6%
J - Information and communication	41.3%
K - Financial and insurance activities	12.1%
L - Real estate activities	0.4%
N - Administrative and support service activities	2.0%
None	0.2%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A - The Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient and third-party rating) into the overall company view, there was a link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("GHG") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") , is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.2	ES: A-D G: 1-4	95%
Third-Party Data	6.6	0-10	

With regards to the NB ESG Quotient rating, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“CVaR”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 23.8% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for

further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 95% and this coverage is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.0	6.8	100%

2023 reference period	ES: B G: 2.2	6.6	95%
------------------------------	-----------------	-----	-----

Year-on-year, the NB ESG Quotient ES rating has remained unchanged.

Year-on-year, the NB ESG Quotient G rating has moved due to changes associated with companies held and trading activity within the Portfolio.

Year-on-year, the third-party data rating has moved due to changes associated with companies held and trading activity within the Portfolio as well as potential changes to, or differences in, the company's third-party rating by the provider.

Year-on-year, the combined coverage of the NB ESG Quotient and the third-party rating has moved due to changes associated with companies held and trading activity within the Portfolio.

2. CVaR

	CVaR	Coverage
2022 reference period	-18.5%	96%
2023 reference period	-23.8%	95%

Year-on-year, the CVaR projected loss has increased due to changes associated with companies held and trading activity within the Portfolio. As previously noted, the scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Year-on-year CVaR coverage has moved due to changes associated with companies held and trading activity within the Portfolio.

3. Exclusions

Consistent with the previous calendar year, there were no breaches during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments

How did this financial product consider principal adverse impacts on sustainability factors?

N/A – the Portfolio did not commit to considering principal adverse impacts on sustainability factors.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 – 31 December 2023

The Sub-Investment Manager has used the EU statistical classification of economic activities ("**NACE**") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
JOHNSON & JOHNSON	C - Manufacturing	4.1%	United States
PROCTER & GAMBLE	C - Manufacturing	4.0%	United States
EXXON MOBIL CORP	C - Manufacturing	3.4%	United States
MERCK & CO INC	C - Manufacturing	3.4%	United States
JPMORGAN CHASE	K - Financial and insurance activities	3.2%	United States
BERKSHIRE HATHAWAY INC CLASS B	K - Financial and insurance activities	3.1%	United States
DUKE ENERGY CORP	D - Electricity, gas, steam, and air conditioning supply	3.1%	United States
MONDELEZ INTERNATIONAL INC	C - Manufacturing	2.7%	United States
SEMPRA	D - Electricity, gas, steam, and air conditioning supply	2.7%	United States
DTE ENERGY	D - Electricity, gas, steam, and air conditioning supply	2.6%	United States
WALMART INC	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	2.6%	United States
PFIZER INC	C - Manufacturing	2.5%	United States
EXELON CORP	D - Electricity, gas, steam, and air conditioning supply	2.4%	United States
NEWMONT	B - Mining and Quarrying	2.2%	United States
RIO TINTO ADR REPTG ONE PLC	B - Mining and Quarrying	2.1%	Australia

What was the proportion of sustainability-related investments?

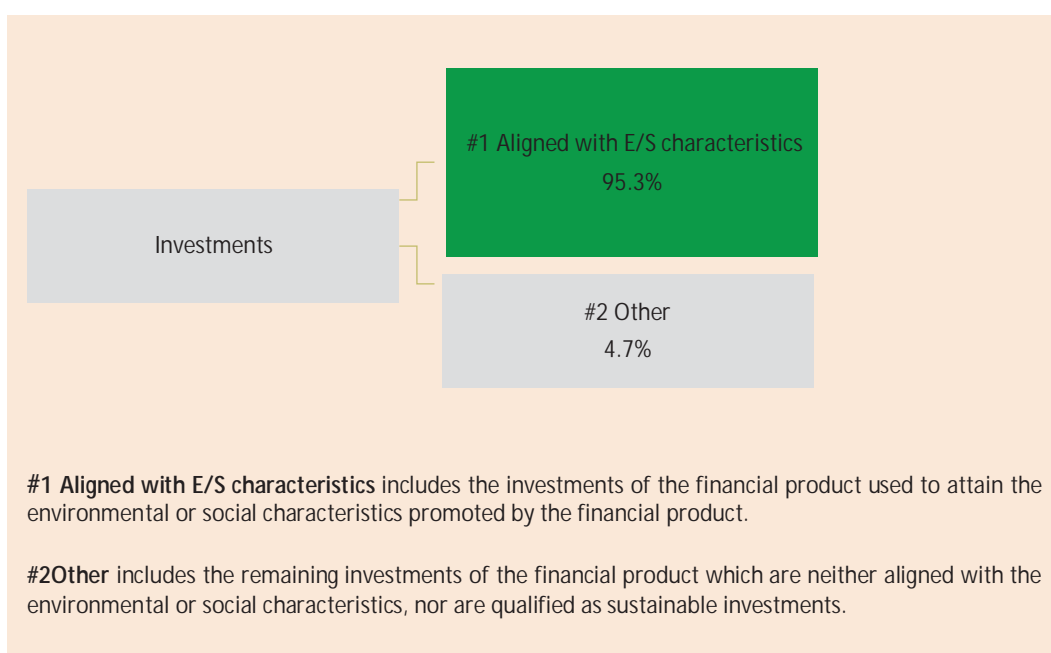

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 75% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 95.3% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 25% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable

investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 4.7% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	8.3%
C - Manufacturing	48.3%
D - Electricity, gas, steam, and air conditioning supply	15.8%
E - Water supply; sewerage; waste management and remediation activities	0.2%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.4%
H - Transporting and storage	0.3%
I - Accommodation and food service activities	1.5%
J - Information and communication	4.3%
K - Financial and insurance activities	15.1%
L - Real estate activities	0.1%

Q - Human health and social work activities	0.3%
M - Professional, scientific, and technical activities	1.4%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- What was the share of investments made in transitional and enabling activities?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

● *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A - The Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A - The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Long Short Equity Fund (the“Portfolio”)

Legal entity identifier: 54930034RCIO16VO2Z23

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”).

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

● *How did the sustainability indicators perform?*

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

This ESG framework was applied to the long side of the Portfolio which takes a multi-year time horizon. The Sub-Investment Manager’s short positions are expressed through derivatives and therefore did not commit to taking ESG factors into consideration. The anticipated long / short allocation of the Portfolio is detailed in the section of the Supplement entitled “*Investment Approach*”.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Companies with a favourable and/or an improving NB ESG Quotient or third-party rating had a higher chance of being included in the long side of the Portfolio. Companies with a poor NB ESG Quotient or third-party rating, especially where a poor NB ESG Quotient or third-party rating was not being addressed by a company, were more likely to be removed from the long investment universe or divested from long side of the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with companies that had a poor NB ESG Quotient or third-party rating, in order to assess whether concerns were being addressed adequately.

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G:2.2	ES: A-D G: 1-4	81%
Third-Party Data	6.3	0-10	

With regards to the NB ESG Quotient rating, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio’s aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio’s promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“CVaR”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security’s or portfolio’s market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 21.5% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 68%, this coverage is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

Only long positions were covered by the above listed NB ESG exclusion policies.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● *...and compared to previous periods?*

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.2	6.5	98%
2023 reference period	ES: B G: 2.2	6.3	81%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, the NB ESG Quotient G rating has remained unchanged and the third-party data rating has declined. This is due to changes associated with companies held and trading activity, as well as due to differences in the company's third-party rating by the provider.

Year-on-year, the combined coverage of the NB ESG Quotient and the third-party rating has declined.

Given the Portfolio's exposure to short positions (which are not considered as investments that are aligned with the environmental or social characteristics promoted by the Portfolio), it may be challenging to maintain a high-level of Combined Coverage across the Portfolio. The ESG analysis is performed internally, with the support of third-party data, and is not outsourced. The Sub-Investment Manager makes assessments on these ESG characteristics on a continuous basis. For a short period of time, at the point of investment, a company may not be assigned an NB ESG Quotient rating. The Sub-Investment Manager has periodic engagements with third-party ESG data vendors to discuss issues such as data coverage and will evaluate options to help resolve data gaps. Subscription to multiple third-party ESG data vendors enables the Sub-Investment Manager to evaluate third party data coverage and quality of data between third-party ESG vendors. In addition, the Sub-Investment Manager continues to explore new third-party ESG data products and vendors to evaluate potential enhancements to our existing third-party ESG data coverage.

2. CVaR

	CVaR	Coverage
2022 reference period	-16.6%	59%
2023 reference period	-21.5%	68%

Year-on-year, the CVaR projected loss has increased due to improvements in data coverage for individual companies held in the Portfolio and trading activity within the Portfolio. As previously noted, the scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Year-on-year, CVaR Portfolio coverage has improved. This is due to improvements in data coverage for individual companies held in the Portfolio and due to trading activity.

3. Exclusions

Consistent with the previous calendar year, there were no breaches during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

N/A – the Portfolio did not commit to holding sustainable investments.

- *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

N/A – the Portfolio did not commit to holding sustainable investments.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A – the Portfolio did not commit to holding sustainable investments.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

N/A – this Portfolio did not commit to considering principal adverse impacts.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
MICROSOFT CORP	J - Information and Communication	4.0%	United States
APPLE INC	C - Manufacturing	2.7%	United States
AMAZON COM INC	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	2.6%	United States
ALPHABET INC CLASS A	J - Information and Communication	2.5%	United States
META PLATFORMS INC CLASS A	J - Information and Communication	2.5%	United States
SALESFORCE INC	J - Information and Communication	2.4%	United States
MCDONALDS CORP	I - Accommodation and food service activities	2.3%	United States
TJX INC	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	2.2%	United States
ADOBE INC	J - Information and Communication	2.0%	United States
UNITEDHEALTH GROUP INC	K - Financial and insurance activities	1.9%	United States
UNION PACIFIC CORP	H - Transportation and storage	1.9%	United States
NEXTERA ENERGY INC	D - Electricity, gas, steam, and air conditioning supply	1.9%	United States
CME GROUP INC CLASS A	K - Financial and insurance activities	1.7%	United States
KEURIG DR PEPPER INC	C - Manufacturing	1.7%	United States
S&P GLOBAL INC	J - Information and Communication	1.7%	United States

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

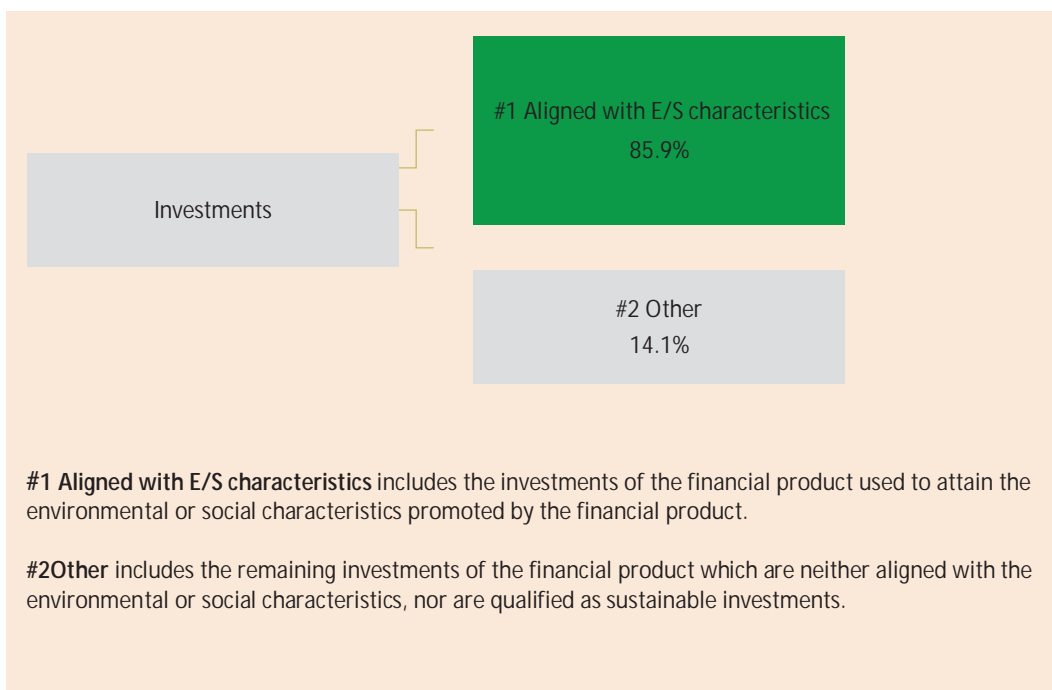

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

- The Portfolio aims to hold a minimum of 60% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 85.9% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 40% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 14.1% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Asset allocation describes the share of investments in specific assets.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	23.3%
D - Electricity, gas, steam and air conditioning supply	5.5%
E - Water supply; sewerage; waste management and remediation activities	1.2%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	12.7%
H - Transporting and storage	3.2%
I - Accommodation and food service activities	3.7%
J - Information and communication	31.6%
K - Financial and insurance activities	12.0%
L - Real estate activities	2.1%
M - Professional, scientific and technical activities	0.9%
N - Administrative and support service activities	1.5%
Q - Human health and social work activities	0.7%
S - Other services activities	0.2%
None	1.4%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

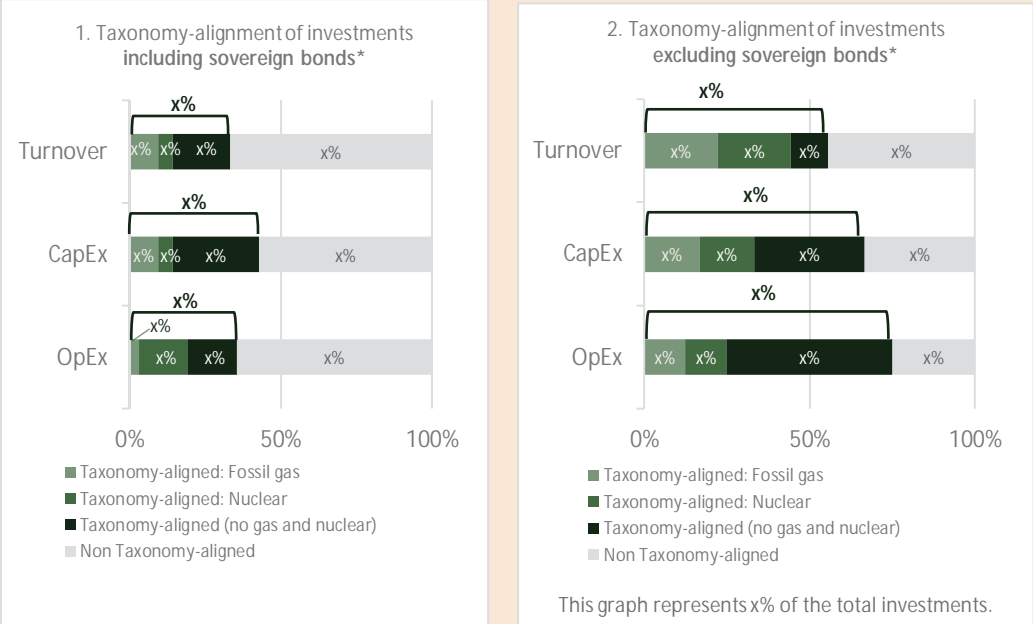

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● What was the share of investments made in transitional and enabling activities?

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A – The Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient or third-party rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient and third-party rating) into the overall company view, there was a link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its long side investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the long side of the Portfolio were attained, the long side of the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

As mentioned above, only long positions are covered by the above listed NB ESG exclusion policies.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*

N/A

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

N/A

- *How did this financial product perform compared with the reference benchmark?*

N/A

- *How did this financial product perform compared with the broad market index?*

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Multi Cap Opportunities Fund (the “Portfolio”)

Legal entity identifier: 549300K77TBAIVA0NY51

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of **socially sustainable economic activities**. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES:B G: 2.2	ES: A-D G: 1-4	99%
Third-Party Data	6.2	0-10	

With regards to the NB ESG Quotient rating, for environmental and social (“**ES**”) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (“**G**”) ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio’s aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio’s promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security’s or portfolio’s market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 15.6% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 99% and this coverage is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D	0-10	0-100%

	G: 1-4		
2022 reference period	ES: C G: 2.3	6.2	99%
2023 reference period	ES: B G: 2.2	6.2	99%

Year-on-year, the NB ESG Quotient ES rating has improved, the NB ESG Quotient G rating has improved and the third-party data rating has remained unchanged. This is due to changes associated with companies held and trading activity, as well as due to differences in the company's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-12.6%	99%
2023 reference period	-15.6%	99%

Year-on-year, the CVaR projection has moved due to changes associated with companies held and trading activity within the Portfolio.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
BERKSHIRE HATHAWAY INC CLASS B	K - Financial and insurance activities	5.2%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 99.6% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 0.4% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly This calculation was based on a mark-to-market assessment of the Portfolio and may be based on

Asset allocation describes the share of investments in specific assets.

incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A – The Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Real Estate Securities Fund (the “Portfolio”)

Legal entity identifier: 549300T9PUOV1AK0OR82

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with a social objective</div></div></div></div></div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “**Reference Period**”). All Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; and materials sourcing.
- **Social Characteristics:** access to healthcare; community relations; employee incentives & risk taking; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; and workforce diversity & inclusion.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 1.6	ES: A-D G: 1-4	97%
Third-Party Data	6.2	0-10	

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

With regards to the NB ESG Quotient ratings, for environmental and social (“**ES**”) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (“**G**”) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each issuer held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks and opportunities for companies. CVaR is a scenario analysis tool evaluating economic risks and opportunities under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

By calculating the financial risks and opportunities from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks and opportunities. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

For the Reference Period, CVaR projected that a warming climate scenario could result in a loss of 16.3% in the valuation of assets under assessment. The Reference Period data has been calculated based on the average of the four calendar quarter ends.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment

Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 95%. The Reference Period CVaR coverage is an average of the CVaR coverage across the four calendar quarter ends.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Sub-Investment Manager also excluded the purchase of issuers that own, operate or primarily provided integral services to private prisons, given the significant social controversy and reputational risks associated with these, and also because the dependency on Justice Department policies and facilities or local governments' policies regarding their operations and the fact that these facilities are not easily reconfigurable for alternative uses.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D	0-10	0-100%

	G: 1-4		
2022 reference period	ES: B G: 1.5	6.2	100%
2023 reference period	ES: B G: 1.6	6.2	97%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, however the NB ESG Quotient G rating has declined. The third-party data rating has also remained unchanged. This is due to changes associated with companies held and trading activity, as well as due to differences in the company's third-party rating by the provider.

2. CVaR

	CVaR	Coverage
2022 reference period	-9.8%	93%
2023 reference period	-16.3%	95%

Year-on-year, the CVaR projected loss has increased due to changes associated with companies held and trading activity within the Portfolio. As previously noted, the scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

3. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy aligned investments

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
AMERICAN TOWER REIT CORP	L - Real estate activities	8.4%	United States
PROLOGIS REIT INC	L - Real estate activities	8.0%	United States
PUBLIC STORAGE REIT	L - Real estate activities	7.2%	United States
CROWN CASTLE INC	N - Administrative and support service activities	5.6%	United States
EQUINIX REIT INC	J - Information and Communication	5.3%	United States
REALTY INCOME REIT CORP	L - Real estate activities	4.9%	United States
WELLTOWER INC	L - Real estate activities	4.0%	United States
VICI PPTYS INC	L - Real estate activities	3.7%	United States
SIMON PROPERTY GROUP REIT INC	L - Real estate activities	3.6%	United States
EXTRA SPACE STORAGE REIT INC	L - Real estate activities	3.4%	United States
ESSEX PROPERTY TRUST REIT INC	L - Real estate activities	3.1%	United States
APARTMENT INCOME REIT CORP	L - Real estate activities	3.0%	United States
IRON MOUNTAIN INC	L - Real estate activities	3.0%	United States
KIMCO REALTY REIT CORP	L - Real estate activities	2.8%	United States
VENTAS REIT INC	L - Real estate activities	2.8%	United States

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 97.1% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable

investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 2.9% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
C - Manufacturing	2.8%
J - Information and communication	5.4%
L - Real estate activities	86.1%
N - Administrative and support service activities	5.8%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate), the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their valuation, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – the Portfolio has not designated a reference benchmark.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Small Cap Fund (the “Portfolio”)

Legal entity identifier: 549300CG2QDECVFZQ378

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div><div></div></div> Yes</div>	<div><div><div></div><div></div><div></div></div> No</div>
<div><div><div></div> It made sustainable investments with an environmental objective: ____%</div><div><div><div></div> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div></div>	<div><div><div></div> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</div><div><div><div></div> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><div><div></div> with a social objective</div></div></div></div></div>

The most recent SFDR Pre-Contractual Template of the Portfolio can be found [here](#).

This SFDR Periodic Report template reports on the 2023 calendar year (the “Reference Period”). Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio’s data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics’ ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("GHG") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: C G: 2.3	ES: A-D G: 1-4	99%
Third-Party Data	5.6	0-10	

With regards to the NB ESG Quotient rating, for environmental and social (“ES”) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (“G”) ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating to be attained by a company prior to investment.

The average NB ESG Quotient rating is a weighted average that reflects the ESG characteristics that were considered to be the most material drivers of ESG risk and opportunity for each company held in the Portfolio. It is not an ESG assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the material ESG risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio’s aggregate holdings to long-term, financially material, ESG risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of material ESG risks and opportunities is an essential element of the Portfolio’s promotion of environmental and social characteristics.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio did not purchase securities of companies that manufactured firearms or companies that derived 5% or more of their revenue from tobacco, gambling or adult entertainment.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

...and compared to previous periods?

For the 2022 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2022, being the only quarter end in the reference period that followed the entry into force of the SFDR RTS (which included the publication of the SFDR pre-contractual disclosures templates).

The below sustainability indicators' quantitative data for the Reference Period was calculated by averaging the four calendar quarter ends.

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: C G: 2.3	5.4	100%
2023 reference period	ES: C G: 2.3	5.6	99%

Year-on-year, the NB ESG Quotient ES rating has remained unchanged, the NB ESG Quotient G rating has remained unchanged and the third-party data rating has improved. This may be due to an improvement in individual companies according to the third-party data provider, or due to differences in the company's third-party rating by the provider.

2. Exclusions

Consistent with the previous calendar year, there were no breaches (of the above listed ESG exclusions) during the Reference Period.

	Total number of breaches
2022 reference period	0
2023 reference period	0

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the “**Product Level PAIs**”):

Product Level PAIs	
Theme	Adverse sustainability indicator
<i>Greenhouse gas emissions</i>	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
<i>Social and employee matters</i>	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2023 in the “Schedule of Investments” section of the financial statements.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	% Assets	Country
LATTICE SEMICONDUCTOR CORP	C - Manufacturing	2.6%	United States
MANHATTAN ASSOCIATES INC	J - Information and Communication	2.3%	United States
FAIR ISAAC CORP	J - Information and Communication	2.2%	United States
POOL CORP	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	2.1%	United States
SPS COMMERCE INC	J - Information and Communication	2.0%	United States
QUALYS INC	J - Information and Communication	1.9%	United States
CHEMED CORP	Q - Human health and social work activities	1.9%	United States
RBC BEARINGS INC	C - Manufacturing	1.8%	United States
ASBURY AUTOMOTIVE GROUP INC	G - Wholesale and Retail trade; Repair of Motor Vehicles and Motorcycles	1.8%	United States
POWER INTEGRATIONS INC	C - Manufacturing	1.7%	United States
HAEMONETICS CORP	C - Manufacturing	1.7%	United States
BIO TECHNE CORP	C - Manufacturing	1.7%	United States
LITTELFUSE INC	C - Manufacturing	1.6%	United States
VALMONT INDS INC	C - Manufacturing	1.6%	United States
EAGLE MATERIALS INC	C - Manufacturing	1.6%	United States

What was the proportion of sustainability-related investments?

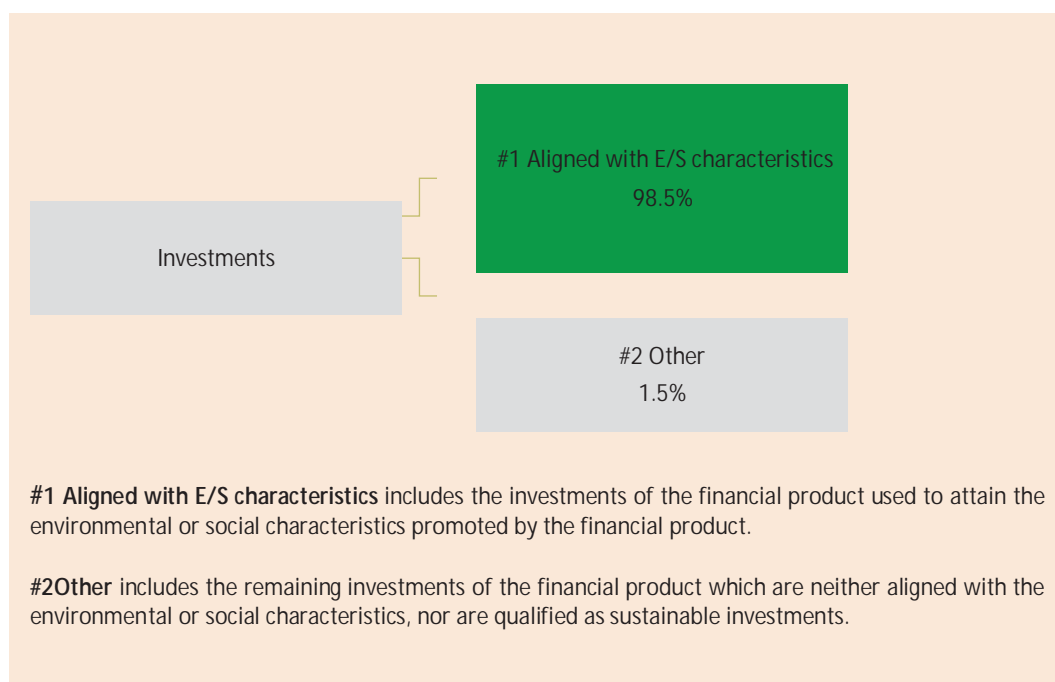

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

- The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. During the Reference Period, the Portfolio held 98.5% investments that were aligned with the environmental or social characteristics promoted by the Portfolio.
- The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio. During the Reference Period, the Portfolio held 1.5% “Other” investments.

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly This calculation was based on a mark-to-market assessment

of the Portfolio and may be based on incomplete or inaccurate company or third-party data. The Reference Period data was calculated by averaging the data of the four calendar quarter ends

● *In which economic sectors were the investments made?*

The Reference Period data was calculated by averaging the data of the four calendar quarter ends.

Economic Sector – NACE	% Assets
B - Mining and quarrying	4.0%
C - Manufacturing	42.8%
E - Water supply; sewerage; waste management and remediation activities	0.1%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	8.9%
H - Transporting and storage	2.2%
I - Accommodation and food service activities	1.1%
J - Information and communication	16.6%
K - Financial and insurance activities	11.4%
L - Real estate activities	1.7%
M - Professional, scientific, and technical activities	6.5%
N - Administrative and support service activities	1.8%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- What was the share of investments made in transitional and enabling activities?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

● *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A - The Portfolio did not commit to holding sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and ESG. The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process. ESG integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying material ESG risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that material ESG factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's ESG integration approach considers ESG opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and exclusionary screens (to identify potential non-compliance with the above listed ESG exclusions). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*
N/A
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
N/A
- *How did this financial product perform compared with the reference benchmark?*
N/A
- *How did this financial product perform compared with the broad market index?*
N/A

This document is issued by Neuberger Berman Asset Management Ireland Limited ("NBAMIL") which is authorised and regulated by the Irish Central Bank ("CBI") and is registered in Ireland, at 2 Central Plaza Dame Street, Dublin 2. In Switzerland the representative and paying agent is BNP Paribas Securities Services, succursale de Zurich, Selnaustrasse 16, 8002 Zurich, Switzerland. Both the place of performance and the place of jurisdiction for Shares in the Company's sub-funds offered or distributed in or from Switzerland shall be the seat of the Swiss representative. The prospectus, key investor information document, the company's articles of association, the latest audited annual accounts and any subsequent half-yearly accounts of the Company may be obtained free of charge from the representative in Switzerland.

Neuberger Berman Investment Funds plc (the "Company") is authorised by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities under the European Communities ("UCITS") Regulations 2011 (S.I. 352 of 2011) of Ireland, as amended.

This document has been provided for information purposes only to and/or directed only at persons who are professional clients or eligible counterparties. All information is subject to change without notice. No part of this document may be reproduced in any manner without the written permission of NBAMIL. Firm data, where relevant, including employee and assets under management figures, reflect collective data for the various affiliated investment advisers that are subsidiaries of Neuberger Berman Group LLC (the "firm"). Firm history/timeline information dates back to the 1939 founding of Neuberger & Berman (the predecessor to Neuberger Berman Group LLC), and highlights key business expansions, including those that resulted from acquisitions of the various affiliated investment advisers that now comprise the firm. Investment professionals referenced include portfolio managers, research analysts/associates, traders, and product specialists and team dedicated economists/strategists.

While Neuberger Berman believe that the information is correct at the date of production, no warranty or representation is given to this effect and no responsibility can be accepted by Neuberger Berman to the recipient of this document or end users for any action taken on the basis of the information contained herein. No reliance may be placed for any purpose on the information and opinions contained in this document or their accuracy or completeness. Opinions expressed herein reflect the opinion of Neuberger Berman and are subject to change without notice. The Company may not be eligible for sale in some countries and it may not be suitable for all types of investor for further information see the current prospectus. Please go to www.nb.com/europe/literature.html for more information.

Fixed income securities are subject to the risk of an issuer's ability to meet principal and interest payments on the obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk). Fixed income securities are also exposed to the risk that their or their issuers' credit ratings may be downgraded, which can cause a significant drop in the value of such securities.

Lower rated or unrated (i.e. non-investment grade or high yield) securities are more likely to react to developments affecting market and credit risk than are more highly rated securities, which primarily react to movements in the general level of interest rates. Investors should carefully consider the relative risks of investing in high yield securities and understand that such securities generally are not meant for short-term investing. Investors who subscribe in a currency other than the base currency of the Company are exposed to currency risk. Fluctuations in these exchange rates may affect the return on investment.

Past performance is not indicative of future results. For details of the investment risks, which may include but are not limited to liquidity, interest rate, credit and currency risk, see the current prospectus. Please note that any dividends/interest which the Company may receive may be subject to withholding tax. The benchmark does not take into account the effects of tax and the deduction is therefore not reflected in the benchmark return illustrated herein. The investment objective and performance benchmark is a target only and not a guarantee of the Company performance. The index is unmanaged and cannot be invested in directly. Index returns assume reinvestment of dividends and capital gains and unlike fund returns do not reflect fees or expenses. Adverse movements in currency exchange rates can result in a decrease in return and a loss of capital. The investments of each Portfolio may be fully hedged into the Portfolio's base currency: this may reduce currency risks but may also expose the Portfolio to other risks such as the default of a counterparty. As noted above for further information relating to risks specific to this strategy please see the current prospectus.
