General Information

The following information is derived from and should be read in conjunction with the full texts and definitions section of the Prospectus.

Neuberger Berman Investment Funds plc (the "Company") is an investment company with variable capital incorporated in Ireland on 11 December 2000 under registration number 336425 as a public limited company pursuant to the Companies Act 2014 (as amended). The Company has been authorised by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities pursuant to the provisions of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended (the "UCITS Regulations"). The Company is constituted as an umbrella fund insofar as its share capital is divided into different series of shares with each series of shares representing a separate investment portfolio of assets (each a "Portfolio"). Shares of any Portfolio may be divided into different classes to accommodate different subscription and/or redemption provisions and/or dividend and/or charges and/or fee arrangements and/or currencies including different total expense ratios. As detailed in the "Management and Administration" section of the Prospectus, the Directors have appointed Neuberger Berman Asset Management Ireland Limited ("NBAMIL") on 1 July 2021 as the Manager to provide the day to day management of the business affairs of the Company in accordance with the requirements of the Central Bank.

At 31 December 2023, the Company was comprised of fifty-three separate portfolios of investments ("Portfolios"), each of which is represented by a multiple series of Redeemable Participating Shares. These are set out in the table below:

Portfolio	Launch Date*	SFDR Category**

*First day of operations.

**Please refer to Appendix VIII for a details of Sustainable Finance Disclosure Regulation.

¹ Portfolio authorised by the Hong Kong Securities and Futures Commission (the "SFC") and hence may be offered to the public of Hong Kong.

² Portfolio not authorised by the SFC and not available to Hong Kong investors.

The Company has segregated liability between its Portfolios and accordingly any liability incurred on behalf of or attributable to any Portfolio shall be discharged solely out of the assets of that Portfolio.

Neuberger Berman Uncorrelated Trading Fund (or "Uncorrelated Trading"), Neuberger Berman Global High Yield Sustainable Action Fund (or "Global High Yield Sustainable Action"), Neuberger Berman Multi-Asset Income Fund (or "Multi-Asset Income") and Neuberger Berman Emerging Markets Select Equity Fund (or "Emerging Markets Select Equity") liquidated on 24 May 2023, 16 June 2023, 6 July 2023 and 7 September 2023, respectively, and are therefore no longer available for subscription. Neuberger Berman Diversified Currency Fund, Neuberger Berman Multi-Style Premia Fund, Neuberger Berman Absolute Return Multi Strategy Fund and Neuberger Berman Global Equity Index PutWrite Fund liquidated during the prior reporting years and are therefore no longer available for subscription. Neuberger Berman Multi-Asset Growth Fund, Neuberger Berman Global Equity Fund, Neuberger Berman Absolute Alpha Fund, Neuberger Berman Global Bond Absolute Return Fund and Neuberger Berman China Equity Opportunities Fund liquidated during the prior reporting years and were revoked by the Central Bank on 19 May 2023.

Please refer to Appendix VII for a full list of the Managers, Sub-Investment Managers and Sub-Advisers for each Portfolio.

Please refer to Appendix VIII for details of Sustainable Finance Disclosure Regulation.

Investment objectives and list of active share classes of the Portfolios that were available for investment as at 31 December 2023 are as follows:

General Information (Continued)

5G Connectivity

The investment objective of 5G Connectivity (the “Portfolio”) is to achieve a target average return of 3-5% over the MSCI All-Country World Index before fees over a market cycle (typically 3 years).

The Portfolio seeks to achieve its investment objective by primarily investing in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

The following are the active share classes in the Portfolio at the financial year end (referred to herein as the “year end” or “year ended”):

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

¹Authorised for public distribution in Hong Kong.

General Information (Continued)

China A-Share Equity

The investment objective of China A-Share Equity (the "Portfolio") is to achieve long-term capital appreciation primarily through investment in a portfolio of China A Share equity holdings that provide exposure to economic development in the People's Republic of China (the "PRC").

The Portfolio seeks to achieve its investment objective by investing directly in China A Shares through the Stock Connects and through the Quota, and indirectly, mainly through investments in equity-linked securities issued by international investment banks and also through equity and debt securities which may be issued by entities which are managed by affiliates of the Sub-Investment Manager.

The following are the active share classes in the Portfolio at year end:

Share Class Name	Share Class Launch Date	Currency
CNY I Accumulating Class	28 July 2020	CNY
USD I Accumulating Unhedged Class	28 July 2020	USD
USD I Distributing Unhedged Class	28 July 2020	USD

China Bond

The investment objective of China Bond (the "Portfolio") is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) by primarily investing in fixed income instruments issued in the Chinese local currency markets.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments which are issued within the PRC by PRC government, PRC government agencies or corporate issuers which have their head office or exercise an overriding part of their economic activity in the PRC and which are denominated in or are exposed to the currency of the PRC via the RQFII (Renminbi Qualified Foreign Institutional Investor) Quota. For the purposes of the Portfolio, investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

The following are the active share classes in the Portfolio at year end:

Share Class Name	Share Class Launch Date	Currency
CNY A (Monthly) Distributing Class ¹	4 November 2020	CNY
CNY I Distributing Class ¹	8 June 2018	CNY
CNY Z Accumulating Class	8 September 2015	CNY
GBP I2 Accumulating Class	9 February 2021	GBP
SGD A (Monthly) Distributing Unhedged Class	12 March 2019	SGD
USD I Accumulating Unhedged Class	8 September 2015	USD
USD Z Accumulating Class	29 March 2019	USD
USD Z Accumulating Unhedged Class	10 April 2018	USD

¹Authorised for public distribution in Hong Kong.

China Equity

The investment objective of China Equity (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the Greater China equity market. The Portfolio seeks to achieve this objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets and issued by companies that:

- are incorporated or organised under the laws of, or that have a principal office in, the People's Republic of China ("PRC"), Hong Kong Special Administrative Region ("SAR"), Macau SAR or Taiwan (the "Greater China Region");
- generally derive a majority of their total revenue or profits from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in the Greater China Region; or
- generally hold a majority of their assets in the Greater China Region (each a "Greater China Company").

General Information (Continued)

China Equity (continued)

The Portfolio may also invest in hybrid securities and equity-related securities, such as convertible debentures, convertible preferred stock, debt instruments with warrants attached, including financial derivative instruments ("FDI"), which are issued by or give exposure to the performance of Greater China Companies.

For the avoidance of doubt, the Portfolio may invest in securities as described herein and which are issued by or giving exposure to Greater China Companies listed or traded on recognised markets located outside of the Greater China Region, including, without limitation, in the United States, the United Kingdom, Singapore and Japan.

The Portfolio invests primarily in mid and large capitalisation companies.

Green Court Capital Management Limited, the Non-Affiliated Sub-Adviser, employs a research intensive, fundamental-driven and bottom-up approach. Ongoing assessments of macroeconomic and market factors augment the stock-picking discipline. The investment approach is discretionary in nature and is designed to consider multiple drivers and investment strategies over different time horizons.

The Portfolio is primarily constructed by taking under and overweight positions to the market benchmark MSCI China Index. Decisions on whether the Portfolio's positions will be under or overweight relative to the benchmark are primarily driven by valuation, quality of valuation and macroeconomic factors, including such variables as opportunities for growth, competitive advantages and risk characteristics, over short-, medium- and long-term investment horizons but the requirements of the Central Bank in respect of concentration limits as set out in the "Investment Restrictions" section of the Prospectus will supersede these factors where relevant.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
CHF I Accumulating Class	31 July 2015	CHF
EUR A Accumulating Class ¹	14 July 2009	EUR
EUR I Accumulating Class	14 July 2009	EUR
EUR Z Accumulating Class	3 June 2014	EUR
GBP A Distributing Class ¹	21 May 2015	GBP
SGD A Accumulating Class ¹	1 December 2014	SGD
USD A Accumulating Class ¹	14 July 2009	USD
USD A Distributing Class ¹	27 August 2014	USD
USD I Accumulating Class	14 July 2009	USD
USD I2 Accumulating Class	11 August 2014	USD
USD M Accumulating Class	27 May 2016	USD
USD U Accumulating Class	27 June 2014	USD
USD Z Accumulating Class	1 August 2014	USD

¹Authorised for public distribution in Hong Kong.

Climate Innovation

The investment objective of Climate Innovation (the "Portfolio") is to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings, focusing on companies that are involved in or derive benefit from climate innovation related technologies and/or activities.

The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on recognised markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation.

General Information (Continued)

Climate Innovation (continued)

The following are the active share classes in the Portfolio at year end:

Share Class Name	Share Class Launch Date	Currency
USD A Accumulating Class	1 August 2023	USD
USD I Accumulating Class	1 August 2023	USD
USD I5 Accumulating Class	1 August 2023	USD
USD Z Accumulating Class	1 August 2023	USD

CLO Income

The investment objective of CLO Income (the "Portfolio") is to achieve an attractive level of total return (a combination of capital appreciation and income) by investing primarily in USD and EUR denominated floating rate collateralised loan obligations ("CLO") mezzanine debt securities and also in US high yield debt securities which are listed or traded on recognised markets.

The Portfolio seeks to achieve its objective through a disciplined investment process, which seeks to identify CLO mezzanine debt securities which are backed by an underlying portfolio of loans with a higher portfolio score.

The following are the active share classes in the Portfolio at year end:

Commodities

The investment objective of Commodities (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by seeking exposure to a broad range of commodities.

The Portfolio seeks to achieve its objective by seeking exposure to a broad range of commodities groups, including energy, precious metals, industrials metals, livestock, softs and agriculture.

The Portfolio will seek to obtain this exposure through a blend of investments including, primarily, investment in commodity-related financial derivative instruments ("FDI"); direct investment in the equities and equity-related securities (namely, common and preferred stock, ADRs and GDRs) of commodity-related companies. The Portfolio may also seek to achieve exposure to commodities by investing in units or shares of collective investment schemes, including exchange traded funds ("ETFs") and other Portfolios of the Company, where such investment provides commodity exposure consistent with the investment policy of the Portfolio.

Corporate Hybrid Bond

The investment objective of Corporate Hybrid Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation).

The Portfolio seeks to achieve its objective by investing primarily in investment grade and sub-investment grade corporate hybrid bonds. The Portfolio seeks to use fundamental bottom-up analysis principles in selecting securities for investment, meaning that the analysis done by Neuberger Berman Investment Advisers LLC (the "Sub-Investment Manager") will focus on the strengths of individual securities as opposed to the selection of securities by reference to broader themes, such as industries. The analysis of the strength of a security is specific to the individual security itself, as opposed to having regard to broader themes e.g. the credit rating of the security is analysed relative to its proposed yield. The Portfolio focuses on securities which are listed or traded on recognised markets globally, and not limited by industry or sector. The Portfolio may rotate its exposure to geographic regions and countries and between sectors and issuers, based on economic or regional fundamentals, such as the valuation of each security relative to other similar securities. The Portfolio may have medium levels of volatility due to its investments in subordinated debt and/or below investment grade securities.

Developed Market FMP – 2027

The investment objective of Developed Market FMP – 2027 (the “Portfolio”) is to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities.

The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide. Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a Recognised Rating Agency or may also be unrated.

Emerging Market Debt – Hard Currency

The investment objective of Emerging Market Debt – Hard Currency (the “Portfolio”) is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from hard currency-denominated debt issued in emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by public or private issuers in emerging market countries which are denominated in hard currency. For the purposes of the Portfolio, “Hard Currency” is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc and investors should also note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

General Information (Continued)

Emerging Market Debt Sustainable Investment Grade Blend

The investment objective of Emerging Market Debt Sustainable Investment Grade Blend (the "Portfolio") is to achieve an attractive level of total return from a blend of investment grade rated hard and local emerging market currency denominated debt, issued by sovereigns, quasi-sovereigns, sub-sovereigns and corporate credits in emerging market countries that meet the sustainable criteria defined within the "Sustainable Investment Criteria" section of the Prospectus (the "Sustainable Criteria").

The Portfolio seeks to achieve its objective by investing primarily in investment grade debt securities and money market instruments which are issued by governments of, government agencies in or corporate issuers which have their head office or exercise an overriding part of their economic activity in emerging market countries and which are denominated in or are exposed to the currencies of such emerging market countries ("local currency") or denominated in Hard Currency. For the purposes of the Portfolio, "Hard Currency" means US Dollar, Euro, Sterling, Japanese Yen, and Swiss Franc.

USD Z Accumulating Class	2 November 2017	USD

Emerging Markets Equity

The investment objective of Emerging Markets Equity (the "Portfolio") is to achieve long-term capital growth. The Portfolio seeks to achieve this objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets globally and issued by companies that:

- trade principally on a recognised stock exchange in emerging market countries;
- are organised under the laws of and have a principal office in emerging market countries; or
- derive 50% or more of their total revenues from, and/or have 50% or more of their total assets in, goods produced, sales made, profits generated or services performed in emerging market countries. The Portfolio may also invest in other collective investment schemes, which provide exposure to such securities, subject to a maximum of 10% of the Portfolio's Net Asset Value.

Neuberger Berman Investment Advisers LLC (the "Sub-Investment Manager") uses a fundamental bottom-up, research-driven securities selection approach focusing on high return businesses while factoring in economic, legislative and business developments to identify countries and economic sectors (such as Energy, Financials, Health Care, Telecommunication Services and Utilities) that it believes may be particularly attractive.

The Sub-Investment Manager seeks to invest in companies that it believes have sustainable free cash flow growth and are trading at attractive valuations. The Portfolio seeks to reduce risk by diversifying among many industries within the countries and economic sectors it identifies, and it generally intends to remain diversified across countries and geographical regions.

Euro Bond

The investment objective of Euro Bond (formerly: "Euro Opportunistic Bond") (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by investing in a diversified mix of Euro-denominated fixed and floating rate debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process investing in Euro-denominated bonds across a variety of sectors and maturities, utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

The following are the active share classes in the Portfolio at year end:

Share Class Name	Share Class Launch Date	Currency
EUR I Accumulating Class	14 November 2018	EUR
EUR I Distributing Class	14 November 2018	EUR

Euro Bond Absolute Return

The investment objective of Euro Bond Absolute Return (the "Portfolio") is to generate positive absolute returns over a market cycle (typically 3-5 years), irrespective of market conditions with a moderate level of volatility. It aims to achieve this by implementing an unconstrained strategy combining long and synthetic short positions in a diversified portfolio of predominantly Euro-denominated debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

European High Yield Bond

The investment objective of European High Yield Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the European high yield fixed income market.

The Portfolio seeks to achieve its objective by investing primarily in corporate high yield fixed income securities, which are (i) denominated in a European currency or (ii) issued or guaranteed by companies of any industrial sector that are domiciled in, or exercise the main part of their economic activity in a European country that are listed, dealt or traded on recognised markets.

The following are the active share classes in the Portfolio at year end:

¹Authorised for public distribution in Hong Kong.

European Sustainable Equity

The investment objective of European Sustainable Equity (the "Portfolio") is to achieve a minimum excess annualised return of 2% over the Benchmark (the MSCI Europe Index (Total Return, Net of Tax, EUR)) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of European equity holdings that comply with the Sustainable Criteria (as set out in the Prospectus).

Investors should note that the target return is not guaranteed over the investment horizon, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of the investment horizon, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

Event Driven

The investment objective of Event Driven (the "Portfolio") is to generate positive market neutral, absolute risk adjusted returns with low correlation to broader equity markets through utilising event driven strategies.

The Portfolio seeks to achieve its investment objective by taking both long and synthetic short positions in global equity securities utilising event driven strategies. Event driven strategies are based on announced or anticipated events or a series of events and on investing in the securities of companies that could be affected by the occurrence of such events. The Portfolio will take exposure to equity securities that are listed or traded on recognised markets in developed markets, and that are subject to or expected to be subject to corporate events including and not limited to mergers, takeover bids, exchange offers, tender offers, spin-offs, proxy fights, liquidations, recapitalisations, corporate restructurings, litigation, legislation or regulatory events, or post-bankruptcy situations. The Portfolio will take long positions in respect of equity securities that it expects to increase in value as a result of such events and take synthetic short positions in respect of equity securities that it expects to decrease in value as a result of such events.

The following are the active share classes in the Portfolio at year end:

Share Class Name	Share Class Launch Date	Currency

USD I5 Accumulating Class	26 October 2022	USD

Global Bond

The investment objective of Global Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from global fixed income markets.

The Portfolio seeks to achieve this objective by investing primarily in:

- Investment grade debt securities issued by governments and agencies from Organisation for Economic Co-operation and Development ("OECD") countries; and
- Investment grade debt securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries.

General Information (Continued)

Global Bond (continued)

All securities will be listed, dealt or traded on recognised markets without any particular focus on any one industrial sector.

There are four main differentiating factors that set the Portfolio's approach:

- Diversification through the use of multiple uncorrelated alpha sources;
- Active FX management;
- Integrated Global Macro Overlay; and
- Proprietary risk management systems.

In addition, the Manager and the Sub-Investment Manager conduct analysis of data and seeks to exploit opportunities across multiple time horizons. Central to the investment philosophy is the Manager's and the Sub-Investment Manager's qualitative judgment, which is exercised at all stages of the investment process. This discretion enables it to take into account information and events that cannot be readily quantified, for example political events, shifts in regulatory regimes or the effects of market positioning and hedging.

Global Diversified Income FMP – 2024

The investment objective of Global Diversified Income FMP – 2024 (the "Portfolio") is to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities.

The Portfolio seeks to achieve its investment objective by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide including within Emerging Markets. Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency.

The following are the active share classes in the Portfolio at year end:

Global Equity Megatrends

The investment objective of Global Equity Megatrends (formerly: “Global Thematic Equity”) (the “Portfolio”) is to achieve long-term capital appreciation through investment in a portfolio of equity holdings that are exposed to global long-term themes.

The Portfolio seeks to achieve its objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and industrial sectors.

The following are the active share classes in the Portfolio at year end:

¹Authorised for public distribution in Hong Kong.

Global Flexible Credit Income

The investment objective of Global Flexible Credit Income (the “Portfolio”) is to maximise total return from current income and long-term capital appreciation by investing in a diversified mix of global fixed rate and floating rate debt securities, including high income securities.

The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide including within Emerging Markets. Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency.

Global High Yield SDG Engagement

The investment objective of Global High Yield SDG Engagement (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the global high yield fixed income market.

The Portfolio seeks to achieve its objective by investing primarily in:

- US dollar and non-US dollar denominated high yield fixed income securities that are issued or guaranteed by corporate issuers of any industrial sector; and
- short duration, high yield fixed income securities issued by governments and agencies globally that are primarily denominated in US dollars located throughout the world that are listed, dealt or traded on recognised markets.

The Portfolio will invest primarily in securities denominated in the currencies included in the BofA Merrill Lynch Global High Yield Constrained Index (USD Hedged Total Return).

In addition, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

The following are the active share classes in the Portfolio at year end:

General Information (Continued)

Global Investment Grade Credit

The investment objective of Global Investment Grade Credit (the "Portfolio") is to achieve a target average return of 1% over the Benchmark (Bloomberg Barclays Global Aggregate Corporate Index (Total Return, Hedged USD)) before fees over a market cycle (typically 3 years) from investing primarily in investment grade corporate fixed income securities globally.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The Portfolio will invest primarily in investment grade fixed income securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries. The Portfolio will seek to use fundamental, bottom-up analysis principles in selecting securities for investment, meaning that the Manager's and the Sub-Investment Manager's analysis will focus on the strengths of individual securities as opposed to the selection of securities by reference to broader themes, such as industries. For example the credit rating of the security will be analysed relative to its proposed yield and the characteristics of the security will be analysed to determine cash flow predictability, using such factors including the issuer's cash flow profile, debt and leverage. The Portfolio will focus on securities which are listed or traded on recognised markets globally, and is not limited by industry or sector. The Portfolio may rotate its exposure to geographic regions and countries and between sectors and issuers, based on economic or regional fundamentals, such as the valuation of each security relative to other similar securities.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	27 July 2023	EUR
USD I Accumulating Class	1 September 2021	USD
USD X Accumulating Class	1 September 2021	USD
USD Z Accumulating Class	1 September 2021	USD

Global Opportunistic Bond

The investment objective of Global Opportunistic Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities globally under varying market environments.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments issued by governments and their agencies and corporations worldwide. Securities will be listed, dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency. On an ancillary basis, the Portfolio may hold preferred stocks issued by public or corporate issuers.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

USD I2 Accumulating Class	23 April 2018	USD
USD Z Accumulating Class	16 May 2019	USD

General Information (Continued)

Global Real Estate Securities

The investment objective of Global Real Estate Securities (the “Portfolio”) is to seek total return through investment in securities of real estate companies located globally, emphasising both capital appreciation and current income.

The Portfolio seeks to achieve its investment objective by investing at least 80% of its net assets in US and non-US equity securities issued by real estate investment trusts (“REITs”) and common stocks and other securities issued by other real estate companies. A REIT is a company dedicated to owning, and usually operating, income-producing real estate, or to financing real estate. The Portfolio defines a real estate company as one that derives at least 50% of its revenue from, or has at least 50% of its assets in, real estate. The Portfolio will allocate its assets among various regions and countries, including the US, but will at all times invest in a minimum of three different countries. The Portfolio may also invest up to 20% of its Net Asset Value in real estate equity securities issued by companies domiciled in emerging market countries.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR M Accumulating Class	29 January 2016	EUR

USD Z Accumulating Class	13 February 2015	USD

¹ Authorised for public distribution in Hong Kong.

Global Sustainable Equity

The investment objective of Global Sustainable Equity (the “Portfolio”) is to achieve a minimum excess annualised return of 2% over the Benchmark (The MSCI World Index (Total Return, Net of Tax, USD)) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of global equity holdings that comply with Sustainable Criteria (as set out in the Prospectus).

Investors should note that the target return is not guaranteed over the investment horizon, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of the investment horizon, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and industrial sectors. The Portfolio will invest primarily in equity securities issued by companies whose behaviours, processes and operations contribute to system-level progress towards environmental and social objectives, such as: access to healthcare, sustainable consumption (which is the use of products, energy and services so as to minimise the environmental impact of such use) and conscious consumers, access to information and the digital revolution, energy transition and industrial innovation, resource efficiency, human capital development, fintech and financial inclusion (which is the availability and equality of opportunities to access financial services). In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Manager invests in high quality companies, which (i) provide attractive sustainable products or services, (ii) demonstrate a commitment to sustainability in their operations, and (iii) are economically competitive, as described in greater detail below. The Sub-Investment manager will pursue an investment process which will embed analysis of “best in class” companies within an investment universe of listed equity securities issued by companies primarily from developed market countries globally, from both a financial and an Environmental, Social, and Governance (“ESG”) perspective. The financial and ESG analysis will enable the Sub-Investment Manager to evaluate and identify companies that are deemed “best in class” in terms of their performance on financial and ESG factors.

Global Sustainable Value

The investment objective of Global Sustainable Value (formerly: "Systematic Global Sustainable Value") (the "Portfolio") is to achieve long term capital growth.

The Portfolio seeks to achieve its objective by investing primarily in equity securities issued by companies that are listed or traded on recognised markets globally (which may include emerging market countries).

Research identifies investment themes (i.e. characteristics of stocks that are believed to be systematically linked to the generation of better than average returns). Investment themes are used to assess the characteristics of security issuers and drive stock selection. Themes include, but are not limited to, the valuation, earnings quality, price dynamics and sentiment of each issue.

High Yield Bond

The investment objective of High Yield Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the high yield fixed income market. The Portfolio seeks to achieve this objective by investing primarily in:

- high yield fixed income securities issued by US and foreign corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- high yield fixed income securities issued by governments and agencies in the US that are primarily denominated in US Dollars, that are listed, dealt or traded on recognised markets.

In addition, although the Portfolio concentrates its investments in the US, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

General Information (Continued)

InnovAsia 5G

The investment objective of InnovAsia 5G (the "Portfolio") is to invest primarily in a portfolio of equity holdings, focusing on companies that are involved in or derive benefit from Innovative Technologies (as defined below).

The Portfolio will seek to achieve its objective by investing primarily in equity securities which are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors with innovative technologies or business models that:

- are incorporated or organized under the laws of a country in Asia, or that have a principal office in Asia;
- generally derive a majority of their incremental growth from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in Asia; or
- generally hold a majority of their assets in Asia.

The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

In seeking to achieve the Portfolio's investment objective, the Sub-Investment Managers pursue the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to disruptive technologies, innovative business models with a relatively low penetration rate in Asia or which are in a relatively early growth phase as well as long-term, structural trends and themes such as 5G/internet of things, (including but not limited to data infrastructure, connected devices or advanced semiconductors), digital lifestyle (including but not limited to healthcare, education or internet and consumer) and industrial innovations (including but not limited to robotics, clean tech or smart logistics) ("Innovative Technologies"):

- Qualitative business analysis: to identify companies which are key enablers of Innovative Technologies, as well as companies that are well-positioned to benefit from new business models related to Innovative Technologies;
- Quantitative screening: to identify stocks that the Sub-Investment Managers believe may be too illiquid or have too small a market capitalisation;
- Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success which is determined by reference to existing financial data (eg, market share data); and
- Security selection and portfolio construction: to select companies with the ability to provide solutions to drive Innovative Technologies that the Sub-Investment Managers believe have significant capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.

Macro Opportunities FX

The investment objective of Macro Opportunities FX (the "Portfolio") is to achieve a target average return of 5-6% over cash before fees over a market cycle (typically 3 years).

The Portfolio seeks to achieve its investment objective:

- firstly, by obtaining long and short exposures to a range of global liquid currencies, predominantly but not limited to the G10 currencies and opportunistically, in the most liquid emerging market country currencies (these are typically the most heavily traded e.g. Brazilian Real, Singapore Dollar and South Korean Won using a range of financial derivative instruments; and
- secondly, through investing in global fixed income debt securities and short-dated Euro-denominated bonds to opportunistically seek to enhance cash returns and to provide liquidity and collateral cover for exposures created through the use of financial derivative instruments as outlined above.

Short Duration Emerging Market Debt

The investment objective of Short Duration Emerging Market Debt (the “Portfolio”) is to achieve a stable income and return by investing in a diversified selection of Hard Currency-denominated short duration sovereign and corporate debt issued in emerging market countries. For the purposes of the Portfolio, “Hard Currency” is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc.

The Portfolio seeks to achieve this objective by investing primarily in short duration debt securities and money market instruments issued by public or corporate issuers which have their head office, or exercise an overriding part of their economic activity, in emerging market countries and which are denominated in Hard Currency. Investors should also note that corporate issuers that are, either directly or indirectly, 100% government-owned are considered to be public issuers. With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on recognised markets globally, without any particular focus on any one industrial sector or region.

Investments in securities issued by companies located in, and governments and government agencies of, emerging markets countries may involve additional risk, relative to investments in more developed economies.

General Information (Continued)

Short Duration High Yield SDG Engagement

The investment objective of Short Duration High Yield SDG Engagement (the “Portfolio”) is to generate high current income by investing in short-duration high yield fixed income securities.

The Portfolio seeks to achieve this objective by investing primarily in short duration high yield bonds issued by:

- US and non-US corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- governments and agencies in the US that are primarily denominated in US dollars that are listed, dealt or traded on recognised markets without any particular focus on any one industrial sector.

In addition, although the Portfolio will concentrate its investments in the US or other Organisation for Economic Co-operation and Development (“OECD”) countries, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

Strategic Income

The investment objective of Strategic Income (the “Portfolio”) is to maximise total return from high current income and long-term capital appreciation by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities under varying market environments.

The Portfolio seeks to achieve this objective by investing primarily in debt securities issued by US corporations or by the US government and its agencies. Such securities will be listed, dealt or traded on recognised markets and may be rated investment grade or below investment grade or non-rated by recognised rating agencies.

General Information (Continued)

Sustainable Asia High Yield

The investment objective of Sustainable Asia High Yield (the “Portfolio”) is to outperform the JP Morgan JESG JACI High Yield Index (Total Return, USD) before fees over a market cycle (typically 3 years) by primarily investing in below investment grade rated Hard Currency-denominated debt instruments issued in Asian countries that comply with the Sustainable Criteria.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The Portfolio will invest primarily in below investment grade rated Hard Currency-denominated debt securities and money market instruments which are issued by governments or government agencies of, or corporate issuers which have their head office or exercise an overriding part of their economic activity in, Asian countries and which are consistent with the Portfolio’s objective of promoting environmental and social characteristics. For the purposes of the Portfolio, Hard Currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc. Investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on recognised markets globally, without any particular focus on any one industrial sector.

In determining the investments which the Portfolio will make, the Manager and the Sub-Investment Manager will prioritise issuers which:

- have a lower carbon emission intensity. The Portfolio aims to achieve a carbon emission intensity reduction of at least 30% compared to that of the broader Asia high yield debt investment universe, represented by the JPMorgan Asian Credit High Yield Index (the “Index”); and
- demonstrate better environmental, social and governance (“ESG”) practices. The Portfolio aims to achieve a higher ESG score as compared to the broader Asia high yield debt investment universe, represented by the Index, based on third party ESG scores from an established external provider.

The objective of lower carbon emission intensity is with a view to achieving the long-term global warming objectives of the Paris Agreement.

In addition, the Portfolio will make meaningful allocations to environmental, social and sustainability-labelled fixed income securities and, as a result, will have a higher exposure to such securities as compared to the Index, dependent on market opportunities.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

General Information (Continued)

Sustainable Emerging Market Corporate Debt

The investment objective of Sustainable Emerging Market Corporate Debt (the "Portfolio") is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from debt issued in emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by corporate issuers which have their head office or exercise an overriding part of their economic activity in emerging market countries, which may be denominated in Hard Currency or the currencies of such emerging market countries. For the purposes of the Portfolio, "Hard Currency" is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc.

Sustainable Emerging Market Debt - Hard Currency

The investment objective of Sustainable Emerging Market Debt - Hard Currency (the "Portfolio") is to outperform the Benchmark (JPMorgan ESG EMBI Global Diversified Index (Total Return, USD)) before fees over a market cycle (typically 3 years) by investing primarily in Hard Currency-denominated debt securities issued in emerging market countries that comply with the Sustainable Investment Criteria, as defined in the Prospectus.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by public or private issuers in emerging market countries which are denominated in hard currency and which are consistent with the Portfolio's sustainability objective. For the purposes of the Portfolio, hard currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc and investors should also note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

Tactical Macro

The investment objective of Tactical Macro (the "Portfolio") is to achieve positive returns regardless of the market environment by identifying market pricing imbalances across a broad range of asset classes, markets and regions in a highly risk-managed framework.

The Portfolio seeks to achieve this objective by identifying key aspects of the macro environment to develop a universe of investment theses, based on the Sub-Investment Manager's analysis of key aspects of the macro environment which are considered in order to select investments.

The following are the active share classes in the Portfolio at year end:

Share Class Name	Share Class Launch Date	Currency
USD I Accumulating Class	30 June 2023	USD
USD I5 Accumulating Class	30 June 2023	USD
USD Z Accumulating Class	30 June 2023	USD

Ultra Short Term Euro Bond

The investment objective of Ultra Short Term Euro Bond (the "Portfolio") is to achieve an attractive level of outperformance over the Euro cash return over a period of 1 year irrespective of the market environment by taking exposure to a diversified mix of short-term Euro-denominated fixed and floating rate debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process investing in Euro-denominated bonds across a variety of sectors and maturities, utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

General Information (Continued)

Uncorrelated Strategies

The investment objective of Uncorrelated Strategies (the "Portfolio") is to seek capital appreciation with an emphasis on absolute returns from a diversified portfolio of uncorrelated investment strategies.

The Portfolio seeks to achieve its objective by allocating its assets to fully discretionary investment advisers, which employ a variety of investment strategies and will invest globally without a focus on any particular industrial sector.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

General Information (Continued)

US Equity Index PutWrite

The Investment objective of US Equity Index PutWrite (the "Portfolio") is to seek long term growth of capital and income generation.

The Portfolio seeks to achieve its goal primarily through a strategy of writing collateralised put options on global equity indices and exchanged traded funds ("ETFs") providing exposure to US equity indices, such as the S&P 500 and Russell 2000. The put options will be traded on recognised markets.

US Long Short Equity

The investment objective of US Long Short Equity (the "Portfolio") is to seek long term capital appreciation with a secondary objective of principal preservation.

The Portfolio seeks to achieve its objective by taking long and synthetic short positions in equity and equity-linked securities, including Exchange Traded Funds ("ETFs") listed or traded in US equity markets. The Portfolio may also, but to a lesser extent take long and synthetic short positions in equity, equity-linked securities and ETFs which are listed or traded on recognised markets located in the countries comprising the MSCI All Country World Index (which may include emerging market countries). Investments generally include those companies across all industrial sectors with a market capitalisation of at least USD 250 million measured at the time of initial investment.

US Multi Cap Opportunities

The investment objective of US Multi Cap Opportunities (the “Portfolio”) is to achieve capital growth through the selection of investments using systematic, sequential research. The Portfolio seeks to achieve this objective by Neuberger Berman Investment Advisers LLC (the “Sub-Investment Manager”) using systematic, sequential research in identifying potential investments. Investment selection is the result of both quantitative and qualitative analysis in an effort to identify companies that are believed to have the potential to increase in value. This potential may be realised in many ways, some of which include: free cash flow generation, product or process enhancements, margin increases and improved capital structure management.

US Real Estate Securities

The investment objective of US Real Estate Securities (the “Portfolio”) is to achieve total return through investments in real estate securities, emphasising both capital appreciation and current income. The Portfolio seeks to achieve this objective by investing in a concentrated portfolio principally in securities (including convertible bonds) issued by real estate investment trusts (“REITs”). It should be noted that the Portfolio does not acquire any real estate directly.

General Information (Continued)

US Small Cap

The investment objective of US Small Cap (the "Portfolio") is to achieve capital growth through the selection of investments applying analysis of company key metrics and macro economic factors. The Portfolio seeks to achieve this objective by investing primarily in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on recognised markets.

The Portfolio seeks to identify undervalued companies whose current market share and balance sheet are strong and whose financial strength is largely based on existing business lines rather than on projected growth.

Factors in identifying such companies include:

- above-average returns;
- an established market niche;
- circumstances that may make it difficult for new competitors to enter the market;
- an ability to finance their own growth; and
- sound future business prospects.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

General Information (Continued)

US Small Cap Intrinsic Value

The investment objective of US Small Cap Intrinsic Value (the "Portfolio") is to achieve long term capital growth.

The Portfolio seeks to achieve its objective by investing primarily in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on recognised markets in the US. The Portfolio's investment in small capitalisation companies will not be restricted by sector or industry.

Directors' Report

The Directors present herewith their annual report and audited financial statements for Neuberger Berman Investment Funds plc (the "Company") for the year ended 31 December 2023 and comparatives for the year ended 31 December 2022.

Statement of Directors' Responsibilities

The Directors are responsible for preparing the annual report and the financial statements in accordance with applicable Irish Law and Generally Accepted Accounting Practice in Ireland including the Financial Reporting Standards ("FRS") 102: 'The financial reporting standard applicable in the UK and Republic of Ireland' issued by the Financial Reporting Council and published by the Chartered Accountants Ireland.

Under Irish law, the Directors shall not approve the financial statements unless they are satisfied that they give a true and fair view of the Company's assets, liabilities and financial position as at the end of the financial year and the profit or loss of the Company for the financial year.

In preparing these financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent;
- state whether the financial statements have been prepared in accordance with applicable accounting standards and identify the standards in question, subject to any material departures from those standards being disclosed and explained in the notes to the financial statements; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Company will continue in business.

The Directors are responsible for keeping adequate accounting records that are sufficient to:

- correctly record and explain the transactions of the Company;
- enable, at any time, the assets, liabilities, financial position and profit or loss of the Company to be determined with reasonable accuracy; and
- enable the Directors to ensure that the financial statements comply with Financial Reporting Standard ("FRS") 102: The financial reporting standard applicable in the UK and Republic of Ireland, the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended (the "UCITS Regulations"), Irish statute comprising the Companies Act 2014 (as amended) and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48 (1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations") and enable those financial statements to be audited.

The Directors are also responsible for safeguarding the assets of the Company and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

Under the UCITS Regulations, the Directors are required to entrust the assets of the Company to a depositary for safe-keeping. In carrying out this duty, the Company has declared custody of the Company's assets to Brown Brothers Harriman Trustee Services (Ireland) Limited (the "Depositary").

Relevant Audit Information Statement

The Directors in office at the date of this report have each confirmed that:

- as far as he/she is aware, there is no relevant audit information of which the Company's auditor is unaware; and
- he/she has taken all the steps that he/she ought to have taken as a Director in order to make himself/herself aware of any relevant audit information and to establish that the Company's auditor is aware of that information.

Directors' Compliance Statement

It is the policy of the Company to comply with its relevant obligations (as defined in the Companies Act 2014 (as amended)). As required by Section 225(2) of the Companies Act 2014 (as amended), the Directors acknowledge that they are responsible for securing the Company's compliance with the relevant obligations. The Directors have drawn up a compliance policy statement as defined in Section 225(3)(a) of the Companies Act 2014 (as amended) and a compliance policy which refers to the arrangements and structures that are in place and which are, in the Directors' opinion, designed to secure material compliance with the Company's relevant obligations. In discharging their responsibilities under Section 225, the Directors relied upon, among other things, the services provided, advice and/or representations from third parties whom the Directors believe have the requisite knowledge and experience in order to secure material compliance with the Company's relevant obligations.

Directors' Report (Continued)

Accounting records

The Directors are responsible for ensuring that adequate accounting records as outlined in Section 281 of the Companies Act 2014 (as amended) are maintained by the Company. To achieve this, the Directors have appointed a service organisation Brown Brothers Harriman Fund Administration Services (Ireland) Limited (the "Administrator"). The Company's accounting records are retained at the Administrator's office at 30 Herbert Street, Dublin 2.

Principal Activities and Review of Business

The Company is an investment company with variable capital incorporated in Ireland on 11 December 2000 as a public limited company. The Company was authorised by the Central Bank as an Undertaking for Collective Investment in Transferable Securities pursuant to the UCITS Regulations. The objective of the Company is the collective investment in transferable securities and other liquid financial assets of capital raised from the public, operating on the principle of risk spreading in accordance with the UCITS Regulations.

The Company is structured as an umbrella fund with segregated liability between Portfolios in that the Directors may from time to time with the prior approval of the Central Bank, issue different series of shares representing separate Portfolios. The assets of each Portfolio are invested in accordance with the investment objectives applicable to such Portfolio as outlined in the general information section of these Financial Statements. Each Portfolio bears its own liabilities and none of the Company, any of the service providers appointed to the Company, the Directors, any receiver, examiner or liquidator, nor any other person will have access to the assets of a Portfolio in satisfaction of a liability of any other Portfolio.

As at 31 December 2023 fifty-three constituent Portfolios were in existence, which are listed in the General Information section of this Annual Report.

Results for the Year and Assets, Liabilities and Financial Position at 31 December 2023

A detailed review of the year and factors which contributed to the performance for the year is included in the Investment Manager's reports. Details of the assets, liabilities and financial position of the Company and results for the year ended 31 December 2023 are set out in the Balance Sheet and Profit and Loss Account for each Portfolio.

Directors

The names and nationalities of the persons who served as Directors at any time during the year ended 31 December 2023 are set out below:

Tom Finlay** (retired on 30 June 2023)	Irish
Gráinne Alexander***	Irish
Michelle Green*	British
Naomi Daly****	Irish
Alex Duncan*	British

*Non-Executive Director

**Independent, Non-Executive Director and Chairman

***Independent, Non-Executive Director

****Independent, Non-Executive Director and Chairperson (effective 1 July 2023)

Directors' and Secretary's Interests

As at 31 December 2023, Ms. Michelle Green and Mr. Alex Duncan are Directors of the Company and also Directors and employees of Neuberger Berman Europe Limited ("NBEL"), the Sub-Investment Manager and Distributor of the Company. Until 15 February 2023 Ms. Michelle Green was also a Director of NBAMIL, the Manager of the Company. Ms. Gráinne Alexander is also Director of NBAMIL.

None of the Directors, the Company Secretary, or their families holds or held any beneficial interests in the Company at 31 December 2023 or during the year (2022: Nil).

Transactions Involving Directors

There are no contracts or arrangements of any significance in relation to the business of the Company in which the Directors or the Company Secretary had any interest as defined in the Companies Act 2014 (as amended) at any time during the year ended 31 December 2023 other than those disclosed in note 10 of these Financial Statements.

Directors' Report (Continued)

Transactions Involving Directors (continued)

Connected Persons

In accordance with the Central Bank's UCITS Regulation 43(1), any transaction carried out with the Company by the Manager, the Depositary, the Investment Adviser and/or associated or group companies of these entities ("connected persons") must be carried out as if negotiated at arm's length. Such transactions must be in the best interest of the shareholders of the Company.

The Board of Directors of the Company (the "Board") is satisfied that (i) there are arrangements (evidenced by written procedures) in place to ensure that the obligations set out above are applied to all transactions with connected parties; and (ii) transactions with connected parties entered into during the period complied with these obligations.

Political Donations

There were no political donations made during the year ended 31 December 2023 (2022: Nil).

Risk Management Objectives and Policies

Each Portfolio is invested in accordance with the investment objectives and policies applicable to the Portfolio as set out in detail in the Prospectus. Investment in each Portfolio carries with it a degree of risk including, but not limited to, the risks referred to in note 12 of these Financial Statements.

Dividends and Retention

The dividend distributions declared and paid during the year are disclosed in the Profit and Loss Account under Finance Costs.

Future Developments

The Company will continue to pursue its investment objective as set out in the Directors' Report.

Other Matters

Russia's invasion of Ukraine, and corresponding events in late February 2022, have had, and could continue to have adverse effects on commodities and European economic activity. Whilst the direct Company's exposure to Russia-Ukraine is limited, Neuberger Berman Group LLC ("Neuberger Berman"), the ultimate parent of Neuberger Berman Asset Management Ireland Limited ("NBAMIL"), will continue to monitor any potential impact on the activities of the Company, including but not limited to the imposed Russian sanctions and the increase in associated macroeconomic and geopolitical risks.

The Israel-Hamas war that began in October 2023 will continue to be monitored for any potential impact on the activities of the Company. The Company's exposure to Israel is, and remains, insignificant.

Audit Committee

The Company has an established audit committee. Ms. Gráinne Alexander, Ms. Naomi Daly and Mr. Alex Duncan are members of the Board of Directors of the Company and are part of the audit committee. Additionally, Mr. John M. McGovern was appointed to the audit committee on 17 August 2023.

Significant Events During the Year

Significant events during the year are set out in note 21 of these Financial Statements.

Significant Events Since the Year End

Significant events since the year end are set out in note 22 of these Financial Statements.

Independent Auditors

The Directors appointed the Independent Auditors, Ernst & Young, Chartered Accountants, in 2000 to audit the financial statements for the year ended 31 December 2001 and subsequent financial periods.

In order to compare the quality and effectiveness of the services provided by the incumbent auditors with those of other audit firms, the Company recently performed a tender process of its external auditor which resulted in the re-appointment of Ernst & Young as the Company's external auditor.

The Independent Auditors have indicated their willingness to continue in office in accordance with Section 383(2) of the Companies Act 2014 (as amended).

Directors' Report (Continued)

Corporate Governance

The Company is subject to and complies with Irish statute comprising the Companies Act 2014 (as amended) and with the UCITS Regulations. The Company does not apply additional requirements in addition to those required by the above. Each of the service providers engaged by the Company is subject to their own corporate governance requirements.

Financial Reporting Process - Description of Main Features

The Directors are responsible for establishing and maintaining adequate internal control and risk management systems of the Company in relation to the financial reporting process. Such systems are designed to manage rather than eliminate the risk of failure to achieve the Company's financial reporting objectives and can only provide reasonable and not absolute assurance against material misstatement or loss.

The Directors have established processes regarding internal control and risk management systems to ensure its effective oversight of the financial reporting process. These include appointing the Administrator to maintain the accounting records of the Company independently of the Manager and the Depositary. The Administrator is required under the terms of the administration agreement to maintain adequate accounting records on behalf of the Company. To that end the Administrator performs regular reconciliations of its records to those of the Depositary. The Administrator is also contractually obliged to prepare for review and approval by the Directors the annual report including financial statements intended to give a true and fair view and the interim report and unaudited abridged financial statements.

The Directors evaluate and discuss significant accounting and reporting issues as the need arises. From time to time the Directors also examine and evaluate the Administrator's financial accounting and reporting routines and monitor and evaluate the external auditors' performance, qualifications and independence. The Administrator has operating responsibility in respect of its internal controls in relation to the financial reporting process and the Administrator's report to the Directors.

Risk Assessment

The Directors are responsible for assessing the risk of irregularities whether caused by fraud or error in financial reporting and ensuring the processes are in place for the timely identification of internal and external matters with a potential effect on financial reporting. The Directors have also put in place processes to identify changes in accounting rules and recommendations and to ensure that these changes are accurately reflected in the Company's financial statements.

The Manager completes in depth reviews of the Financial Statements to ensure that all of the content included is accurate. Should a discrepancy be identified, the Manager would report this to the Board of Directors at the next board meeting, or immediately where the discrepancy is deemed material. Changes in accounting rules and standards are monitored by the Manager and the Company's Administrator; all changes are reported to the Board periodically.

The Manager liaises with the Company's Administrator to ensure that all changes in accounting rules and standards are reflected in the financial statements in a timely manner. The Manager also has regular dialogue with the Company's Auditors.

Control Activities

The Administrator maintains control structures to manage the risks over financial reporting. These control structures include appropriate division of responsibilities and specific control activities aimed at detecting or preventing the risk of significant deficiencies in financial reporting for every significant account in the financial statements and the related notes in the Company's annual report. Examples of control activities exercised by the Administrator include analytical review procedures, reconciliations and automatic controls in IT systems. Prices not available from independent sources are typically valued by the Manager using methods the Directors have approved in the good-faith belief that the resulting valuation will reflect the fair value of the security.

Diversity

With respect to diversity, the Company has no employees and the only individuals engaged directly by it are the Directors. When there is a vacancy on the Board, the objective is to ensure that the Board is diversified with an appropriate mix as regards age, gender, race and educational/professional backgrounds, while achieving compliance by all individuals with regulatory requirements and an overall composition with the requisite experience and skills.

Information and Communication

The Company's policies and the Directors' instructions with relevance for financial reporting are updated and communicated via appropriate channels, such as e-mail, correspondence, telephone and meetings to ensure that all financial reporting information requirements are met in a complete and accurate manner.

Directors' Report (Continued)

Corporate Governance (continued)

Monitoring

The Directors receive regular presentations and review reports from the Depositary, Manager and Administrator. The Directors also have an annual process to ensure that appropriate measures are taken to consider and address the shortcomings identified and measures recommended by the independent auditors.

Capital Structure

No person has a significant direct or indirect holding of securities in the Company. No person has any special rights of control over the Company's share capital. There are no restrictions on voting rights. With regard to the appointment and replacement of Directors, the Company is governed by its Articles of Association, Irish statute comprising the Companies Act 2014 (as amended) and with the UCITS Regulations as applicable to investment funds. The Articles of Association themselves may be amended by special resolution of the Shareholders.

Powers of the Directors

The Directors are responsible for managing the business affairs of the Company in accordance with the Articles of Association. The Directors may delegate certain functions to the Administrator and other parties, subject to the supervision and direction by the Directors. The Directors have appointed the Manager to provide the day to day management of the Company's business affairs and have for this purpose delegated certain of their duties and powers to the Manager. The Directors will receive periodic reports from the Manager detailing, inter alia, its review of the performance of the Company and the Portfolios and providing an analysis of their respective investment portfolios. The Manager will also provide such other information as may from time to time be reasonably required by the Directors for the purposes of such meetings. The Directors have appointed the Depositary in respect of the safekeeping of the Company's assets. Consequently, none of the Directors is an executive Director.

The Articles of Association provide that the Directors may exercise all the powers of the Company to borrow money, to mortgage or charge its undertaking, property or any part thereof and may delegate these powers to the Manager.

Shareholder Meetings

The Annual General Meeting of the Company will be held in Ireland, normally during the month of June or such other date as the Directors may determine. Notice convening the Annual General Meeting in each year at which the audited financial statements of the Company will be presented (together with the Directors' and Auditors' Reports of the Company) will be sent to Shareholders at their registered addresses not less than twenty one clear days before the date fixed for the meeting. Other general meetings may be convened from time to time by the Directors in such manner as provided by Irish law.

Each of the shares entitles the holder to attend and vote at meetings of the Company and of the Portfolio represented by those shares. All votes shall be cast by a poll of Shareholders present in person or by proxy at the relevant Shareholder meeting or by unanimous written resolution of the Shareholders. No class of shares confers on the holder thereof any preferential or pre-emptive rights or any rights to participate in the profits of any other share class or any voting rights in relation to matters relating solely to any other share class.

Any resolution to alter the class rights of the shares requires the approval of three-fourths of the holders of the shares represented or present and voting at a general meeting of the class. The quorum for any general meeting of the class convened to consider any alteration to the class rights of the shares shall be present in person or by proxy two or more persons holding shares issued in that class. In the event that a quorum is not present at a meeting and the meeting is adjourned, the quorum for the adjourned meeting shall be one Shareholder present in proxy or person.

Each of the shares other than subscriber shares entitle the Shareholder to participate equally (subject to any differences between fees, charges and expenses applicable to different classes of shares) on a pro-rata basis in the profits and net assets of the Portfolio in respect of which the shares have been issued, save in the case of profits declared prior to becoming a Shareholder.

Subscriber shares entitle the Shareholders holding them to attend and vote at all general meetings of the Company but do not entitle the holders to participate in the profits or net assets of the Company except for a return of capital on a winding up.

Composition and Operation of Board and Committees

There are four Directors currently, all of whom are non-executive Directors. Ms. Michelle Green is Director of the Company and until 15 February 2023 was also Director of NBAMIL, the Manager of the Company. Ms. Gráinne Alexander is also Director of NBAMIL. The Articles of Association do not provide for retirement of Directors by rotation. However, the Directors may be removed by the shareholders by ordinary resolution in accordance with the procedures established under the Irish Companies Act 2014 (as amended). The Board meets at least quarterly. Other than the Audit Committee, there are no permanently authorised sub-committees of the Board.

The Board has satisfied itself that the Directors have sufficient time to fully discharge their duties and disclose in writing to the Board their other commitments, including other CIS directorships and non Fund directorships.

Directors' Report (Continued)

Corporate Governance (continued)

Irish Funds Corporate Governance Code

The Irish Funds ("IF") has published a corporate governance code ("IF Code") that may be adopted on a voluntary basis by Irish authorised collective investment schemes. It should be noted that the IF Code reflects existing corporate governance practices imposed on Irish authorised collective investment schemes, as noted above. If the IF Code is adopted on a voluntary basis, it can be referred to in the disclosures made in the Directors' Report in compliance with the provisions of the Irish Companies Act 2014 (as amended).

With effect from 1 January 2013, the Board voluntarily adopted the Corporate Governance Code for Irish Domiciled Collective Investment Schemes as published by the IF, as the Company's corporate governance code.

Report of the Depositary to the Shareholders

We have enquired into the conduct of Neuberger Berman Investment Funds plc (the "Company") for the year ended 31 December 2023, in our capacity as Depositary to the Company.

This report including the opinion has been prepared for and solely for the Shareholders in the Company as a body, in accordance with Part 5 of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended, (the 'UCITS Regulations'), and for no other purpose. We do not, in giving this opinion, accept or assume responsibility for any other purpose or to any other person to whom this report is shown.

Responsibilities of the Depositary

Our duties and responsibilities are outlined in Part 5 of the UCITS Regulations. One of those duties is to enquire into the conduct of the Company in each annual accounting period and report thereon to the shareholders.

Our report shall state whether, in our opinion, the Company has been managed in that period in accordance with the provisions of the Company's Memorandum and Articles of Association and the UCITS Regulations. It is the overall responsibility of the Company to comply with these provisions. If the Company has not so complied, we as Depositary must state why this is the case and outline the steps which we have taken to rectify the situation.

Basis of Depositary Opinion

The Depositary conducts such reviews as it, in its reasonable opinion, considers necessary in order to comply with its duties as outlined in Part 5 of the UCITS Regulations and to ensure that, in all material respects, the Company has been managed (i) in accordance with the limitations imposed on its investment and borrowing powers by the provisions of the constitutional documentation and the appropriate regulations and (ii) otherwise in accordance with the Company's constitutional documentation and the appropriate regulations.

Opinion

In our opinion, the Company has been managed during the year, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Company by the Memorandum & Articles of Association, the UCITS Regulations and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 ('the Central Bank UCITS Regulations'); and
- (ii) otherwise in accordance with the provisions of the Memorandum & Articles of Association, the UCITS Regulations and the Central Bank UCITS Regulations.

Date: 17 April 2024

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc

Report on the audit of the financial statements

Opinion

We have audited the financial statements of Neuberger Berman Investment Funds plc ('the Company') for the year ended 31 December 2023, which comprise the Balance Sheet, the Profit and Loss Account, the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares and notes to the financial statements, including the summary of significant accounting policies set out in note 1. The financial reporting framework that has been applied in their preparation is Irish Law and FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland issued in the United Kingdom by the Financial Reporting Council.

In our opinion the financial statements:

- give a true and fair view of the assets, liabilities and financial position of the company as at 31 December 2023 and of its loss for the year then ended;
- have been properly prepared in accordance with FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland; and
- have been properly prepared in accordance with the requirements of the Companies Act 2014, the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011, and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Company in accordance with ethical requirements that are relevant to our audit of financial statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority (IAASA), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Company's ability to continue as a going concern for a period of at least twelve months from the date when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report. However, because not all future events or conditions can be predicted, this statement is not a guarantee as to the company's ability to continue as a going concern.

Other information

The directors are responsible for the other information. The other information comprises the information included in the annual report other than the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc (Continued)

Other information (continued)

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Opinions on other matters prescribed by the Companies Act 2014

In our opinion, based solely on the work undertaken in the course of the audit, we report that:

- the information given in the directors' report for the financial year ended for which the financial statements are prepared is consistent with the financial statements; and
- the directors' report has been prepared in accordance with applicable legal requirements.

We have obtained all the information and explanations which, to the best of our knowledge and belief, are necessary for the purposes of our audit.

In our opinion the accounting records of the Company were sufficient to permit the financial statements to be readily and properly audited and the financial statements are in agreement with the accounting records.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the company and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

The Companies Act 2014 requires us to report to you if, in our opinion, the disclosures required by sections 305 to 312 of the Act, which relate to disclosures of directors' remuneration and transactions are not complied with by the Company. We have nothing to report in this regard.

Respective responsibilities

Responsibilities of directors for the financial statements

As explained more fully in the directors' responsibilities statement set out on page 35, the directors are responsible for the preparation of the financial statements in accordance with the applicable financial reporting framework that give a true and fair view, and for such internal control as they determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on the IAASA's website at:

http://www.iaasa.ie/getmedia/b2389013-1cf6-458b-9b8f-a98202dc9c3a/Description_of_auditors_responsibilities_for_audit.pdf.

This description forms part of our auditor's report.

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc (Continued)

The purpose of our audit work and to whom we owe our responsibilities

Our report is made solely to the Company's members, as a body, in accordance with section 391 of the Companies Act 2014. Our audit work has been undertaken so that we might state to the Company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Company's members, as a body, for our audit work, for this report, or for the opinions we have formed.

Independent Auditors' Report to the Directors of Neuberger Berman Investment Funds Plc

The Directors
Neuberger Berman Investment Funds plc

Opinion

We have audited the accompanying financial statements of Neuberger Berman Investment Funds plc (the "Fund"), which comprise the Balance Sheet as of 31 December 2023, the Profit and Loss Account, the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares, for the year then ended, and the related notes to the financial statements.

In our opinion, the accompanying financial statements present fairly, in all material respects, the balance sheets of the Fund at 31 December 2023, and the results of their operations, changes in net assets for the year then ended, in conformity with Accounting Standards including FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (Irish Generally Accepted Accounting Practice).

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Fund and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with Accounting Standards including FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (Irish Generally Accepted Accounting Practice), and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free of material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Fund's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free of material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about each Fund's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Independent Auditors' Report to the Directors of Neuberger Berman Investment Funds Plc (Continued)

Other Information

Management is responsible for the other information. The other information comprises the information included in the annual report but does not include the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information, and we do not express an opinion or any form of assurance thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

5G Connectivity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 39.43%. Over the same period, the benchmark index, the MSCI All Country World Index (Total Return, Net of Tax, USD) (the Index), returned 22.20%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The slower pace of rate hikes by the Federal Reserve led to general outperformance of tech and growth stocks
- China's reopening hopes at the start of the year faded and sentiment deteriorated on a slower than expected recovery and limited stimulus
- Markets were volatile given macroeconomic uncertainty, including a regional banking crisis in the US, and continued global geopolitical tensions
- Mega-cap growth stocks dominated and the emergence of AI as an investment theme led to a rally in related exposures

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweight to Semiconductors and Software versus the Index
 - Security selection within Technology Hardware, Storage & Peripherals and Health Care
 - AI winners in high-performance semiconductors, hardware, and high-speed networking
- Detractors from relative returns:
 - China exposure
 - Security selection within Interactive Media & Services and Consumer Discretionary

Overview of investment activities during the reporting period

- Increased Semiconductor exposure given rising strategic value and as cyclical bottomed out
- Increased Software exposure on enterprise digitalisation trends
- Increased Mega-cap exposure and reduced SMID-cap exposure given macro uncertainties
- Reduced China exposure and shifted towards Taiwan & Japan

While the end of the rate hike cycle is in sight, macro uncertainty could persist. We thus continue to emphasise on quality but are positioned for cyclical growth. Volatility remains so we are keeping our focus on quality and areas with strong earnings tailwinds/visibility while keeping valuation discipline. The 5G theme is strengthening as it has become a national priority and digitalisation of the economy is irreversible. We are positive on beneficiaries of the acceleration in AI & 5G ramp-up, a strategic semiconductor industry, and proliferation of industrial automation and renewables.

China A-Share Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the CNY I Accumulating Class was -12.31%. Over the same period, the benchmark index, the MSCI China A Onshore Net Index (Total Return, CNY) (the Index), returned -9.87%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The China A-Share market declined in 2023. Expectations for a post-pandemic return to rapid growth, which fueled an early year rally, were frustrated by China's tepid growth reality, a lack of central government stimulus, and turmoil in the Chinese property market.
- Manufacturing activity ticked up at the beginning of the year, but the Chinese manufacturing PMI failed to pass the expansionary threshold of 50 as the year continued. Government stimulus and economic support toward the end of the year did little to change investor sentiment as the consensus saw the measures as insufficient.
- Energy, Communication Services and Utilities were the only sectors to post gains for the year, and Real Estate, Industrials, and Materials sectors declined most.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection within Health Care and Materials contributed most to relative returns for the year. An underweight to Materials also contributed.
- Detractors from relative returns:
 - The Portfolio's full-year underperformance was primarily from the first quarter, when our investment discipline led to an under representation in sectors like AI. For rest of the year, the Portfolio either kept pace with or outperformed the Index.
 - Stock selection within Financials and IT, and a zero allocation to Energy detracted most.

Overview of investment activities during the reporting period

- The Portfolio remained focused on domestic growth via high-quality companies across the market-cap spectrum.
- Our focus remained on companies we consider Quality Compounders—consistent, reliable, high Return on Equity (ROE) Consumer and Health Care names with long-term potential; and Secular Growth Beneficiaries—companies positioned for domestic growth, benefiting from long-term trends and supportive policy, such as in modern manufacturing.
- We made progress with our proprietary ESG research and engagement, utilising meetings with managements to propose changes that we believe will create longer-term advantages.

Looking ahead, we believe that as the Chinese economy transitions away from the property sector, investors will re-focus on the potential for sustainable long-term returns. The Portfolio will remain centered on individual companies with solid fundamentals and attractive valuations. We currently see opportunity in areas such as high dividend paying companies, those serving the lower- and medium-end consumer, medical services and biopharma, and manufacturing technology.

China Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the CNY I Distributing Class was 3.39%. Over the same period, the reference index, the FTSE Chinese Government and Policy Bank Bond 0-1 Year Select Index (CNY Total Return) (the Index), returned 2.21%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The Chinese economy had a constructive start in 2023 from a post-pandemic recovery. However, the reopening optimism soon waned. A significant downturn in China's economic outlook emerged in the second quarter of 2023 on the back of property sector headwinds, weakening external demand and tepid domestic consumption.
- Policymakers took notice of the slowing growth, prompting a shift in strategy in the second half of the year. The Chinese government implemented various stimulus measures to reinvigorate the economy, including two cuts to the Medium-term Lending Facility rate by the People's Bank of China (PBOC) and a significant issuance of 1 trillion renminbi in Central Government Bonds by the NPC Standing Committee. Additional measures aimed at stimulating demand in the housing market and expediting the release of Local Government Special Bonds were also introduced.
- With the macro backdrop, China Government Bonds staged a decent rally, with bond yield finishing the year near the year-to-date lows. The onshore credit markets also reflected this trend, with credit spreads narrowing significantly.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Onshore credits were positive contributors as rates and credit spreads rallied across the board.
 - Offshore credits were positive contributors due to good yield differentials.
- Detractors from relative returns:
 - Our onshore convertible bonds were among the main detractors given the sizeable outflows and poor investor sentiments.
 - Our USD property holdings were among the main detractors.

Overview of investment activities during the reporting period

- We have gradually added duration over the course of the year, mostly in rates. However, the rally in onshore year-to-date credit spreads has led us to adopt a more cautious stance from a valuation perspective.
- Apart from the tight onshore credit spreads, the rates differentials between CNY and USD stayed significantly wide, which resulted in an attractive relative value proposition for Chinese USD credits.

We recognise that the Chinese economy is still grappling with a lack of momentum due to structural shifts within its domestic landscape. At this stage, we believe fiscal measures remain the primary catalyst for revitalising the faltering economy, with the aim to stimulate demand and bolster prices. In our view, it is imperative that such fiscal efforts are complemented by accommodative monetary policies. Therefore, we anticipate a possibility of further monetary easing in the upcoming year. With the local government debt-swap program now in motion, we are beginning to see alleviation in local government's fiscal strain and enhanced underlying liquidity conditions for Local Government Financing Vehicles.

China Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was -22.22%. Over the same period, the benchmark index, the MSCI China All Shares Net Total Return Index (the Index), returned -11.53%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- 2023 has been a challenging year for both offshore and onshore listed China equities as the reopening of the economy did not bring a strong cyclical recovery as anticipated by the market. While domestic travel, restaurant spending, and infrastructure investment have improved since the beginning of the year, the housing market and private investments remained weak.
- There were also persisting concerns over geopolitics, local government financial vehicle (LGFV) risks and a lack of large-scale policy stimulus. To that end, markets had a clear preference for defensive, high-yielding sectors such as Telecom, Energy and Utilities, while other sectors underperformed despite improving fundamentals.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - The Portfolio's main contributors to performance included Health Care (stock selection in biotechnology) and Real Estate (stock selection).
- Detractors from relative returns:
 - Main detractors from performance included Materials (stock selection in chemicals), Consumer Discretionary (stock selection in broadline retail and textiles apparel & luxury goods) and Financials (significant underweight and stock selection in banks).

Overview of investment activities during the reporting period

- Over the past year, the Portfolio's exposure to the IT sector had the largest increase from 6.36% to 11.60%, followed by the Consumer Discretionary sector which increased from 23.89% to 25.86%.
- Meanwhile, the Portfolio's exposure to Materials had the largest decrease from 19.94% to 15.72%, followed by Consumer Staples from 10.63% to 7.59%.

Looking ahead, we remain constructive on the opportunity set given the government's focus on supporting high-quality growth and shoring up investor confidence. In our opinion, the latest policy easing measures including the 1 trillion yuan of additional fiscal boost and support for the troubled Real Estate sector will likely gradually feed through the system and support a broad-based economic recovery. More importantly, we anticipate company earnings to bottom out and gradually come back into vogue as the economy normalise in 2024. Across the Portfolio's core holdings, most have been successful in capturing additional market share amidst the economic difficulties, putting them in a better position to benefit from a prospective recovery that we anticipate in 2024. Lastly, valuations remain very attractive with the MSCI China All Shares trading at a price-to-earnings (P/E) ratio of 9.8x and CSI 300 Index at 10.4x on a forward-looking basis, versus MSCI World Index at 17.4x and S&P 500 Index at 19.5x.

Climate Innovation – Investment Manager's Report

From its inception on 1 August 2023 to the end of the reporting period 31 December 2023, the total return for the USD I Accumulating Class was -3.00%. Over the same period, the benchmark index, the MSCI All Country World Index (Total Return, Net of Tax, USD) (the Index), returned 3.98%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Global equity markets were volatile following the launch of the Portfolio, amid a mixed second quarter earnings season, geopolitical instability, and economic uncertainties. The Federal Reserve (Fed) also signaled that interest rates would stay higher for longer, which drove the 10-year US Treasury yield to a fresh 15-year high. While core inflationary pressures were mild, oil prices continued to surge, and consumer spending trends were mixed.
- Global equity markets then rallied at the end of the year, driven by the Fed's shift towards a more dovish stance after a rapid decline in US rates and the "higher for longer" overhang somewhat easing following cooler inflation data. With the market adjusting to the prospect of rate reductions possibly beginning in March 2024, the S&P 500 approached a new all-time high, while the 10-year US Treasury yield recorded its most significant two-month decrease since 2008.
- Over the period global growth proved that it is not synchronised, with the US outperforming and China underperforming relative to expectations.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweight to the Industrials sector versus the Index
 - Security selection within the Utilities and Industrials sectors
- Detractors from relative returns:
 - Underweight to Financials, Energy, and Communication Services sectors versus the Index
 - Overweight to the Solar industry versus the Index

Overview of investment activities during the reporting period

- Solar exposure was diversified across residential solar and utility-scale solar, including installers.
- Battery exposure was moderated to US/EU EV markets due to the weakening narrative in the third quarter.

Looking ahead, we believe the macroeconomic backdrop may remain fluid as central banks seek to restore inflation to targeted levels while also supporting economic growth, with resulting implications for rates. Overall, we are likely to maintain an overweight to Industrials to reflect our view of long-term structural growth opportunities in that sector, an underweight in the renewables space as fundamentals have yet to turn, and remaining selective in the EV/EV battery space while monitoring demand and regulatory conditions to assess when we can own that space more fulsomely.

CLO Income – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 21.72%. Over the same period, the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (the Index), returned 5.12%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- After exiting 2022 with higher quality collateralised loan obligation (CLO) BB debt spreads in the Secured Overnight Financing Rate (SOFR) +850 context, spreads tightened in January, as receding recession concerns and softening inflation indicators led to higher quality CLO BB spreads tightening to near +775 by late January, which supported the CLO primary market, as CLO managers took advantage of tighter CLO spreads.
- This tightening in credit spreads was quickly reversed in February and March, as unexpected economic data increased investor speculation regarding the potential for additional rate increases, perhaps at an accelerated pace. These concerns were further exacerbated by regional banking failures and concerns in March, which pushed CLO BB spreads into the SOFR +900 context in mid-March, before improved sentiment following US government assurances to stabilise the banking sector led to significant tightening into late March and early April with CLO BB spreads generally stabilising through May in the SOFR +800 to +825 area.
- In June through late September, CLO BB spreads tightened as various economic data continued to point toward a slowing pace in rate hikes, with loans also increasing in price by approximately 2.5 points over the period due to the improved sentiment, setting new year-to-date highs for loan trading levels. At September month-end, CLO BB debt spreads in the secondary market were in the SOFR +745 context.
- In the fourth quarter of the calendar year, CLO spreads tightened meaningfully, as economic data and statements from the Federal Reserve indicated a lower probability of future rate hikes, with the market increasingly gravitating to a "soft landing" economic scenario. At year-end, CLO BB spreads in the secondary market were in the SOFR +675 context.
- As of 31 December 2023, the trailing 12-month par weighted default rate for loans was 1.53%, down 264 basis points from the peak of 4.17% in September 2020. New issue volumes declined by 24% versus 2022's issuance levels. Despite what was a more challenging equity arbitrage environment, the CLO primary market continued to be active as managers took advantage of tighter CLO liability spreads year-over-year.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection within USD CLO mezzanine debt market and allocation to EUR single B CLO debt
- Detractors from relative returns:
 - Allocation to USD high yield market

Overview of investment activities during the reporting period

- While we gradually increased exposure to European CLOs during the reporting period, the Portfolio's underlying credit exposure remains primarily to US credit with 71% of CLO holdings in US CLO debt.
- We took advantage of the CLO debt rally in June to reduce exposure to more seasoned CLOs.

Despite macro and geopolitical concerns, we continue to be fundamentally confident in the significant structural protection provided against credit losses in the underlying loan portfolios. CLO structures in general, and CLOs rated BB in particular, have showed themselves once again to be very robust in the face of a significant recession in 2020. We believe our focus on investing in the highest quality underlying loans, will lead to continued outperformance versus the overall CLO market.

Commodities – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was -6.52%. Over the same period, the Bloomberg Commodity Index (the Index), returned -7.91%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- After a difficult 2022, global stocks and bonds delivered strong performance in 2023, defying most investor's expectations that the global tightening cycle would weigh on economic activity.
- Throughout the year, inflationary pressures eased, and central banks progressed from hawkish rhetoric to data-dependent and ended the year by setting the stage for interest rate cuts in 2024. As investors navigated the fluid economic and investment environment, amid regional banking stress and geopolitical political tensions, corporate earnings remained resilient on the back of a well-supported consumer and labour market.
- The S&P 500 Index and Bloomberg US Aggregate Bond Index both rallied during the year, returning 26.29% and 5.53%, respectively. Commodities lagged in 2023, with the Index down -7.91% over the year.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Positioning in energy and a large underweight in natural gas were the largest contributors to outperformance and helped the Portfolio avoid natural gas decline during the reporting period.
 - Softs were the best performing commodities with cocoa, sugar and coffee making up the top 3 individual commodities. The Portfolio outperformed due to gains from an out-of-benchmark position in cocoa.
 - Livestock was additive to the Portfolio outperforming the Index due to an overweight in live cattle, an out-of-benchmark position in feeder cattle, and an underweight position in lean hogs.
- Detractors from relative returns:
 - Energy and industrial metals were the worst-performing sectors.
 - Overweights in zinc and lead detracted.
 - Precious metals positioning detracted due an underweight in gold and out-of-benchmark position in palladium.
 - Positioning in agriculture detracted slightly, while the Portfolio benefited from an underweight in soybeans and wheat, it was offset by its overweight in corn and Kansas wheat.

Overview of investment activities during the reporting period

As we look ahead to 2024, several key drivers are set to sculpt the commodities landscape. Anticipated rate cuts and a weakening of the dollar, along with strategic output adjustments by OPEC+, are poised to underpin commodities broadly. Energy commodities, in particular, present attractive opportunities as current prices may not fully account for the underlying supply tightness. In the metals sector, copper and aluminium are well-positioned to capitalise on the acceleration of the energy transition. Their critical roles in green technology and infrastructure promise robust performance amidst this global shift. Gold, traditionally a haven asset, is expected to benefit from a decline in real interest rates, with geopolitical uncertainties lending additional support. Agricultural markets face a potential inflection point as the looming threat of a strong El Niño event could jeopardise crop production, thereby linking the fate of global supplies to the geopolitical intricacies surrounding the Black Sea grain corridor deal. Lastly, in a year where traditional markets may experience the highs of 'fear of missing out' (FOMO) during euphoric upswings, inflation-sensitive commodities stand out as a prudent hedge against potential economic potholes. We anticipate a complex set of opportunities for commodity investments, with strategic positioning being key to navigating the market environment in 2024.

Corporate Hybrid Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the EUR I Accumulating Class was 8.14%. Over the same period, the benchmark index, the ICE BofA Global Hybrid Non-Financial 5% Constrained Custom Index (Total Return, Hedged, Euro) (the Index), returned 9.25%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Hybrid markets delivered strong returns, withstanding volatility as fundamentals remained intact.
- Importantly, issuers continued to call their bonds, the single most important driver of idiosyncratic risk in the space. In 2023 we saw companies whose call economics favoured an extension still decide to call at the first call date, such as Ferrovial and Balder. The segment continues to grow fast, with diversification prospects improving at both a sector and geographical level as a result.
- New issuances were, in our view, less attractive due to ESG concerns.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection was the top contributor for the year, generating 121 basis points (bps) in outperformance against the Index. Within this, Utilities selection added relative 91bps, whilst both Telecoms (37bps) and Healthcare (31bps) also contributed meaningfully.
 - Utilities, which are both our biggest overweight (approximately 11%) and absolute position (approximately 50%), have consistently driven strong relative performance for the Portfolio and were the top overall contributor to returns (88bps), with names such as National Grid, EDF, and Veolia outperforming.
- Detractors to relative returns:
 - Asset allocation was the primary detractor from relative performance (-76bps), primarily due to our approximate 6% overweight to cash in the Portfolio. Our allocation to cash provides important liquidity, which gives Portfolio managers the ability to manoeuvre the Portfolio quickly in response to changing market conditions and continues to be a tactical decision.

Overview of investment activities during the reporting period

- Our largest overweights in 2023 at a sector level were in Utilities (approximately 11%) and Telecommunications (approximately 4%). These sectors, in our view, continue to trade below fair value. We have remained underweight Energy (around -13%), the second largest sector in the Index, as we see some disparity in the sector and preferred higher-quality names.
- Our decisions, on a bond-by-bond basis, were driven by valuations considered in the context of an overall low business risk, low peak-to-trough Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA) level and a favourable regulatory backdrop.
- Overall, we were consistently positioned (and remain) overweight defensive, high-quality, high-coupon credits with barriers to entry and stakeholder support.

We believe that the combination of elevated yields, increased opportunities from new issuance, and potential for spread tightening should lead, over time, to a positive outcome for the Portfolio.

Developed Market FMP - 2027 – Investment Manager's Report

From its inception on 31 July 2023 to the reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 4.00%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- In an effort to combat inflation, the hiking cycle continued for developed markets' central banks, with the Federal Reserve and European Central Bank increasing policy rates by 100 basis points (bps) and 200bps, respectively.
- Interest rate volatility was elevated throughout the year. In November and December, with inflation appearing to be in hand and expectations for a growth slowdown, the market increasingly priced aggressive interest rate cuts in the near-term, helping fuel a substantial rally in both government yields and risky assets.
- Credit spreads tightened over the period, reflecting better than expected economic performance and steady demand for credit assets. Global investment grade and non-investment grade credit spreads tightened 32bps and 122bps, respectively.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - The Portfolio's investment grade and high yield corporate exposures delivered broad-based performance.
 - Within investment grade, Banking and Communications exposures were top contributors.
 - Within high yield, Consumer Discretionary and Energy exposures were top contributors.
- Detractors from absolute returns:
 - There were no material detractors from a sector perspective.

Overview of investment activities during the reporting period

- The Portfolio was inceptioned in July 2023.
- The Portfolio was invested across corporate industries, rating cohorts and developed markets countries.
- At the end of the reporting period, the Portfolio was approximately 80% investment grade rated and 20% below investment grade.

With inflation trends improving and central banks' interest rates likely at their peak, we believe that economic growth outcomes will become increasingly important drivers of fixed income returns. We favour holding up to five-year-maturity fixed income, which allows for locking up still-elevated rates before they fade away. We anticipate that the bifurcation in credit markets favouring quality will persist. Overall, we believe that 2024 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building portfolios.

Emerging Market Debt – Hard Currency – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 13.87%. Over the same period, the benchmark index, the JPM EMBI Global Diversified Index (Total Return, USD) (the Index), returned 11.09%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The year began and ended with a positive note for emerging markets (EM) based on the expectation that a soft landing and consequent policy easing in the US would benefit the asset class through lower borrowing costs, with significant volatility in between. The theme received further momentum in December, particularly after the Federal Reserve signaled 75 basis points of rate cuts for 2024.
- The collapse of Silicon Valley Bank in March led to some of the biggest bond market moves in decades. Then from the summer, the prospect of higher for longer interest rates led to a major bond selloff, briefly pushing the US Treasury 10-year yields above 5% for the first time since the Global financial crisis.
- Geopolitical events also remained in focus, particularly after Hamas's attack on Israel in October, while there was no resolution to the war in Ukraine.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Country allocation, driven by overweight allocations to higher yielding markets, particularly El Salvador, Argentina, and Sri Lanka.
 - Underweight allocations to low yielding investment grade (IG) credits.
 - Security selection via euro-denominated bonds in Kazakhstan and Ivory Coast.
- Detractors from relative returns:
 - Underweight allocations to Pakistan and Turkey, buoyed by International Monetary Fund support and pivot to policy orthodoxy, respectively.
 - Overweight allocation to Ecuador, where political challenges compounded financial pressures.

Overview of investment activities during the reporting period

- The Portfolio maintained a high yield bias over IG credits. We added to our overweight allocations in Argentina in expectation of positive policy adjustments post-elections, and in Colombia, El Salvador, Ivory Coast and Serbia, where we see resilience to tighter global funding conditions.
- We added to our overweight allocation to Zambia in expectation of higher recovery values post-restructuring than market pricing in our view. We reduced our overweight allocation to Ecuador on rising political and financial risks.
- Allocation to EUR-denominated bonds and corporate bonds was 18.8% and 13%, respectively.

We anticipate the EM debt asset class to be supported by an environment of slower but lower global yields and a widening growth pickup for emerging vs. developed countries in 2024. We see a limited risk for sovereign defaults this year, while increased International Monetary Fund engagement by different EM countries should support funding needs and reform agendas. Technicals have improved for the asset class, with low investor positioning following a period of record outflows, and limited net issuance. We see opportunities for spread compression in specific issuers and off-benchmark bonds notably in the BB-rated segment. The key risks to our constructive view are either an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes, or the unfolding of a deep global recession which would push EM risk premia materially higher.

Emerging Market Debt – Local Currency – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 13.88%. Over the same period, the benchmark index, the JPMorgan GBI Emerging Markets Global Diversified Index (Total Return, Unhedged, USD) (the Index), returned 12.70%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Overall market sentiment was driven by developments around inflation and monetary policy, with signs of peaking hiking cycles and disinflation across various emerging countries supporting local bond returns.
- Average Index yields tightened from 6.86% to 6.19%, while Emerging Market (EM) currencies appreciated by 2.4% on average versus the US dollar.
- Colombia was the best performing index country, followed by Hungary and Brazil, while Egypt and Turkey were the worst performers with negative returns.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Positioning in Turkey, including an underweight in Turkish lira, coupled with an underweight nominal duration versus overweight inflation-linked bonds.
 - The overweight duration and FX in Colombia and sovereign credit exposures in Argentina.
- Detractors from relative returns:
 - The underweight rates positioning in Poland and Chile
 - Off-benchmark exposure in Ghana and Israel.

Overview of investment activities during the reporting period

- We modestly increased the overweight duration in the Portfolio, particularly in Asian markets such as China and Indonesia where we see room for further monetary stimulus.
- We maintained overweight duration exposures in local markets with high real rates across Latin America and EMEA such as Brazil, Mexico, Colombia and South Africa.
- We maintained a moderate overweight FX risk. We moved from over-to underweight Czech koruna, given expensive valuations and anemic growth, and went overweight in Turkish lira where we see a turning point in sight, following the very aggressive hiking cycle.

We anticipate the EM debt asset class to be supported in 2024 by an environment of slower but not recessionary US growth, lower global yields, and a widening growth pickup for emerging vs. developed countries. Questions remain around China's relatively weak recovery, deflation, and structural headwinds. We anticipate growth of 4.0% to 4.5% in 2024 with some help from countercyclical monetary and fiscal policies. Still, for EM economies in aggregate, GDP growth is anticipated to materially outperform developed markets this year. Broadly, we continue to anticipate disinflation to progress across most EM countries, supporting local bond performance. EM currencies should benefit from USD weakness and, outside Asia, remains supported by elevated carry. The key risks to our constructive view are either an unexpected acceleration of inflation dynamics globally which would result in a more hawkish stance by central banks, or the unfolding of a deep global recession which would push EM risk premia materially higher.

Emerging Market Debt Blend – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 12.28%. Over the same period, the benchmark index, a blend comprised of a 50% weighting to the JPMorgan GBI Emerging Markets Global Diversified Index (Total Return, Unhedged, USD), a 25% weighting to the JPMorgan EMBI Global Diversified Index (Total Return, USD), and a 25% weighting to the JPMorgan CEMBI Diversified Index (Total Return, USD) (the Index), returned 11.29%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Overall market sentiment was driven by developments around inflation and monetary policy, with signs of peaking hiking cycles and disinflation across various emerging countries supporting local bond returns.
- Despite challenges, including higher expected interest rates and weaker economic data early in the year, global markets rallied into year-end due to stable US rates and declining inflation indicators.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Bottom up positioning in local currency from the overweight duration in Hungary and Colombia. The long FX positions in Mexico, Colombia and Uruguay, and the underweight in Turkey.
 - Bottom up positioning in hard currency due to the overweight to high yielding sovereigns including El Salvador, Sri Lanka and Argentina, as well as the underweight to Saudi Arabia.
 - Top down positioning in the overlay due to the cash and FX overlay position was additive.
- Detractors from relative returns:
 - The interest rate duration exposure and CDX position in the overlay and hard currency sleeves.
 - Bottom up positioning in the corporates sleeve detracted due to positions in China and Brazil.

Overview of investment activities during the reporting period

- As volatility continued to dominate markets, we focused in on risk adjusted positioning in the overlay sleeve.
- Within local currency, we modestly increased the overweight duration in the Portfolio. We maintained a moderate overweight to FX risk over the reporting period.
- Within hard currency, we maintained our bias to high yield sovereigns over investment grade.

In 2024, emerging markets (EM) debt is likely to be bolstered by modest US growth, lower yields, and EM outpacing developed nations. Although China's recovery and deflation present concerns, we anticipate 4.0%-4.5% GDP growth, aided by proactive monetary and fiscal policies. EM should surpass developed markets in GDP growth. Disinflation may favour EM local bonds, while weak USD could boost EM currencies, particularly with high carry outside Asia. However, risks include potential global inflation spikes or a severe recession elevating EM risk premia.

Emerging Market Debt Sustainable Investment Grade Blend – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 8.32%. Over the same period, the blended benchmark, comprised of a one-third weighting to the JPMorgan GBI Emerging Markets Global Diversified Investment Grade 15% Cap Index (Total Return, Unhedged, USD) and a two-thirds weighting to the JPMorgan EMBI Global Diversified Investment Grade Index (Total Return, USD) (the Index), returned 9.28%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Overall market sentiment was driven by developments around inflation and monetary policy, with signs of peaking hiking cycles and disinflation across various emerging countries supporting local bond returns.
- Despite challenges, including higher expected interest rates and weaker economic data early in the year, global markets rallied into year-end due to stable US rates and declining inflation indicators.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Bottom up positioning in local currency from the overweight duration in Hungary and Colombia. In addition, the long position in the Mexican peso, Colombian peso and Uruguayan peso.
 - Bottom up positioning in hard currency was also additive due to the overweight to Romania, off-benchmark exposure to South Korea and no exposure to Saudi Arabia.
 - Top down positioning in the overlay due to the cash position was additive.
- Detractors from relative returns:
 - The interest rate duration position in the overlay and hard currency detracted.

Overview of investment activities during the reporting period

- As volatility continued to dominate markets, we focused in on risk adjusted positioning in the overlay sleeve.
- In the local currency space, we modestly increased the overweight duration in the portfolio. We maintained a moderate overweight to FX risk over the period.
- In the hard currency space, we added exposure to sovereigns with strong fundamentals. We also participated in the ongoing investment grade issuance that came at attractive levels.

In 2024, emerging markets (EM) debt is likely to be bolstered by modest US growth, lower yields, and EM outpacing developed nations. Although China's recovery and deflation present concerns, we anticipate 4.0%-4.5% GDP growth, aided by proactive monetary and fiscal policies. EM should surpass developed markets in GDP growth. Disinflation may favour EM local bonds, while weak USD could boost EM currencies, particularly with high carry outside Asia. However, risks include potential global inflation spikes or a severe recession elevating EM risk premia.

Emerging Markets Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 7.69%. Over the same period, the benchmark index, the MSCI Emerging Markets Index (Total Return, Net of Tax, USD) (the Index), returned 9.83%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Emerging Markets (EM) equities advanced in 2023, particularly during fourth quarter. The late-year rally resulted from optimism that the Federal Reserve might begin cutting interest rates in 2024. However, with weakness in China, EM equities underperformed developed international (MSCI World) and US (S&P 500) equities for the year.
- Within the Index, IT, Energy and Financials outperformed, while China-heavy constituents, Real Estate, Consumer Discretionary (including China internets) and Health Care lost value.
- By country, Hungary, and Greece advanced most, with gains in the +50% range. China and Thailand posted the most significant losses.

What affected the Portfolio's performance during the reporting period?

- Contributors to relative returns:
 - Stock selection and an overweight to the strong IT sector, and Health Care
 - By country, stocks based in Taiwan, Saudi Arabia and India contributed most.
- Detractors from relative returns:
 - The Portfolio trailed the Index primarily due to stock selection within Consumer Discretionary and Financials.
 - By country, holdings based in China detracted most, followed by Mexican and Korean holdings.

Overview of investment activities during the reporting period

- A result of bottom-up stock selection, the Portfolio closed the reporting period overweight in IT, Consumer Staples, and Health Care; and underweight in Consumer Discretionary, Materials and Utilities.
- Largest country overweights at year-end included off-benchmark allocations to US- and UK-listed names with a niche in key EM segments, and India. Additions to those geographies were funded by a further decrease in Chinese holdings, which along with South Africa and Korea, were the key underweights.

As we look ahead, from a macro perspective, with US Presidential and many local EM elections scheduled for 2024, headlines could continue to create volatility and influence the direction of EM equity returns in the near term. However, the team believes the tailwinds of lower inflation and declining interest rates, along with a potential uptick in the semiconductor cycle (influencing IT, our largest overweight), should bode well for the asset class and the Portfolio in 2024.

From a bottom-up perspective, we own a collection of high conviction names with exposure to areas that we believe offer sustainable growth potential regardless of global GDP rates. As such, we believe the Portfolio is well positioned for the year ahead.

Emerging Markets Select Equity – Investment Manager's Report

For the period from 1 January 2023 until the Portfolio's close on 7 September 2023, the total return for the USD I Accumulating Class was 3.83 %. Over the same period, the benchmark index, the MSCI Emerging Markets Index (Total Return, Net of Tax, USD) (the Index), returned 5.15%. (Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Emerging Markets (EM) equities advanced during this reporting period. Optimism that the Federal Reserve might begin cutting interest rates in 2024 was countered by weakness in China, however, leaving EM equities trailing both developed international (MSCI World) and US (S&P 500) equities.
- Within the Index, Energy, IT and Industrials outperformed through early September, while Utilities, Health Care and Real Estate lost value.
- By country, Greece, and Hungary advanced most this period. Colombia and South Africa posted the most significant losses.

What affected the Portfolio's performance during the reporting period?

- Contributors to relative returns:
 - Stock selection and overweights to the strong Energy and IT sectors added value.
 - By country, stocks based in Taiwan, South Africa and Saudi Arabia contributed most.
- Detractors from relative returns:
 - The Portfolio trailed the Index primarily due to stock selection within Consumer Discretionary, and Financials.
 - By country, holdings based in China detracted most, followed by our non-Index UK-domiciled EM linked exposure, and Korean stocks.

Overview of investment activities during the reporting period

- A result of bottom up stock selection, the Portfolio's largest overweights in IT, Consumer Staples, and Industrials when the period closed. Underweights included Materials, Communication Services and Utilities.
- The largest country overweights at closing included off-benchmark allocations to US- and UK-listed names with niche business interests in key EM segments, and Hong Kong. China, Malaysia and Saudi Arabia were the Portfolio's key underweights.

The Portfolio closed on 7 September 2023. We thank you for the opportunity to help you meet your financial needs.

Euro Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the EUR I Accumulating Class was 9.94%. Over the same period, the Bloomberg Euro Aggregate index (Total Return, Hedged, EUR) (the Index), returned 7.19%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The first three quarters of 2023 were influenced by the hawkish monetary policy of the European Central Bank (ECB) which hiked its key rate by 200 basis points (bps). Despite the banking tensions, its priority was to tighten monetary conditions to fight against the spill over from the jump in inflation, which was above 5%, in addition to the increase in wages.
- The last quarter of 2023 saw the ECB stop hiking its key rate as its Governing Council considered the key ECB interest rates reached levels that, if "maintained for a sufficiently long duration, will make a substantial contribution to the timely return of inflation to the target."
- Eurozone activity remained weak throughout the year with a mild industrial recession in northern Europe and resilient growth in southern Europe thanks to the support of public expenditure. The last two months of the year showed signs of growth having bottomed out; however, this did not lead to an increase in company defaults, a positive for credit markets.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - The main contributor of the Portfolio's outperformance versus the Index was issuer selection, the year-end rally was particularly strong in this regard.
 - Management of our rate exposure brought additional returns, mainly through yield curve positioning.
 - Our sector rotation was successful in 2023. The banking system tensions in the first quarter led us to increase our exposure to the Financials sector and the lower cost in Energy in the second half of the year to the Capital Goods sector.
- Detractors from relative returns:
 - Derivatives detracted due to protection bought on credit.

Overview of investment activities during the reporting period

- At the start of 2023, our duration was underweight, but it came back to neutral early in March in the wake of the banking system tensions. In the second quarter, high market volatility offered us the opportunity to increase step by step our duration exposure up to 1 year; we primarily bought 5-year bonds. By year end, we had realised gains with the drop-in rates, and reduced our duration overexposure to an underweight.
- We also actively managed our country allocation. In the first quarter we closed our underweighted exposure to Italian government bonds to come back to neutral. When we brought back duration, we did it through German Bunds and swap spread products at the expense of the semi-core countries like France.
- We have been managing an overweight credit exposure throughout the year to take advantage of the market volatility and the opportunities offered on the primary market. We mainly overweighted BBB issuers and high yield rated bonds which were the most sensitive to the market evolution.

In the new year, we believe markets will focus on how fast and how low inflation will fall, depending on the outcome of wage negotiations. We believe the ECB will remove its restrictive policy only when inflation will sustainably fall to its 2% target. This reinforces the risks of an extended too restrictive monetary policy leading to a hard recession. This should limit a rise in real yields, supporting bond market prices.

Euro Bond Absolute Return – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the EUR I Accumulating Class was 8.17%. Over the same period, the ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR) (the Index), returned 2.46%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The first three quarters of 2023 were influenced by the hawkish monetary policy of the European Central Bank (ECB) which hiked its key rates by 200 basis points (bps). Despite the banking tensions, its priority was to tighten monetary conditions to fight against the spill over from the jump in inflation, which was above 5%, to the increase in wages.
- The last quarter of 2023 saw the ECB stop hiking its key rate as its Governing Council considered that the key ECB interest rates reached levels that if "maintained for a sufficiently long duration, will make a substantial contribution to the timely return of inflation to the target."
- Eurozone activity remained weak throughout the year with a mild industrial recession in northern Europe and resilient growth in southern Europe thanks to the support of public expenditure. The last two months of the year showed signs of growth having bottomed out; however, this did not lead to an increase in company defaults, a positive for credit markets.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - The main contributor was issuer selection, the year-end rally was particularly strong in this regard.
 - Management of our rate exposure brought additional returns, mainly through yield curve positioning.
 - Long swap spreads via interest rate swaps and proxy swaps versus core sovereign was successful.
- Detractors from relative returns:
 - High yield credit default swap hedge with iTraxx Crossover detracted from performance.

Overview of investment activities during the reporting period

- We were light on duration at the start of 2023 and came back to 2-2.5 years early in March in the wake of the banking system tensions. In the second quarter, high market volatility offered us the opportunity to increase our duration exposure to reach 4 years; we primarily bought 5-year bonds. By year end, we realised profit gradually with the euro market rally, and returned Portfolio duration back toward 2.5 years.
- We also actively managed our country allocation. In the first quarter, when the spread versus German Bund was approaching 200bps, we closed our absolute short duration in Italy while remaining long in Spain and Portugal government bonds. When we brought back duration, we did it through swap contracts on short- to medium-term of curve and proxy swaps (agencies, covered bonds) versus semi-core countries such as France.
- We have been managing a large credit exposure throughout the year to take advantage of the market volatility and the opportunities offered in the primary market. We were mainly exposed to BBB rated issuers and high yield rated bonds which were the most sensitive to the market evolution.

Looking ahead, we believe markets will focus on the trajectory of core inflation, depending on the outcome of wage negotiations. We believe the ECB will remove its restrictive policy only when inflation will sustainably fall to its 2% target. This reinforces the risks of a too restrictive monetary policy potentially leading to a hard recession. This should limit a rise in real yields, supporting bond market prices.

European High Yield Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the EUR I Accumulating Class was 13.53%. Over the same period, the benchmark index, the ICE BofA European Currency Non-Financial High Yield 3% Constrained Index (Total Return, EUR) (the Index), returned 12.11%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The European high yield market saw strong returns despite some bouts of volatility during the year. The 12.11% Index total return was the highest since 2012. Despite some initial spread widening in October, the significant year-end rally in risk assets and roughly 50 basis points of spread tightening in the final quarter along with the carry helped fuel the strong returns.
- High yield issuers' aggregate fundamentals of Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA) growth, free cash flow, interest coverage and leverage remained in somewhat favourable ranges and earnings season overall came in better-than-feared. Also, the outlook for defaults remained relatively benign.
- While the default rate rose from the lows in 2022, we anticipate default rates to remain in a range that is just below the long-term average. This outlook is based on our bottom up assessment of issuers and driven by the higher-quality ratings mix in European high yield (63% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an Energy sector that is far healthier than in the past few cycles.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - From a sector perspective, positioning in Automotive, Packaging and Finance Companies contributed the most
 - From a ratings perspective, positioning in BB, B, and CCC & below rated issuers added the most
- Detractors from relative returns:
 - From a sector perspective, positioning in Leisure, Energy and Food & Beverage detracted the most
 - From a ratings perspective, BBB & above rated issuers detracted the most

Overview of investment activities during the reporting period

- In our high yield strategies, we rotated selectively into higher quality B's where prices remained attractive relative to underlying fundamentals and default expectations were low.
- Positioning in CCC's was slightly underweight as of year-end versus the Index. This is where we have a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience to inflationary and labour cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to center the Portfolio primarily around higher-quality B and select BB credit risk (based on our internal credit ratings) and overweight sectors that we view as resilient in the current environment.

We believe European high yield valuations are providing more-than-adequate compensation for the around average default outlook, will continue to provide durable income and are attractive compared to other fixed income alternatives. As credit dispersion has risen, our analysts remain keenly focused on the specific fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. Furthermore, we believe that levels of dispersion between industries, ratings categories, issuers and geographies, will continue to be elevated, which will afford opportunities for enhanced returns from security selection. In this context, thorough bottom up credit analysis, together in close contact with management teams, sponsors, and counterparties on the street, will prove critical in allowing us to optimise our Portfolio to take advantage of this opportunity set.

European Sustainable Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the EUR I Accumulating Class was 18.99%. Over the same period, the benchmark index, the MSCI Europe Index (Total Return, Net of Tax, EUR) (the Index), returned 15.83%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Equity markets began 2023 on a strong note, rallying as inflation moderated, but faced headwinds from central banks that continued to hike interest rates as the year progressed.
- By mid-year, recession concerns and financial sector stress, including the collapse of notable US regional banks earlier in the year, led to increased volatility and market weakness.
- However, markets ended the year with robust performance, supported by optimism for easing monetary policies and declining long-term interest rates as inflation pressures receded.
- The US economy showed strong growth, contrasting with Europe and Japan, where economic slowdowns were evident.

What affected the Portfolio's performance during the reporting period?

- Contributors to relative total returns:
 - An overweight sector allocation versus the Index in IT and Industrials contributed the most
 - Stock selection in Financials and Health Care
 - An underweight in Energy, as demand for oil and gas came under pressure in the context of moderating global economic growth
 - At a stock level, holdings in 3i Group, Partners Group, London Stock Exchange Group (Financials), VAT Group and Schneider (Industrials) contributed most to performance
- Detractors from relative total returns:
 - Stock selection within Consumer Discretionary, due to headwinds from softening consumer spending
 - Stock holdings in Alfen (Industrials), SolarEdge Technologies (IT), Bakkafrøst (Consumer Staples) and Sartorius Stedim Biotech (Health Care) were the largest detractors

Overview of investment activities during the reporting period

- We introduced vertically integrated eyecare company Essilor Luxottica to the Portfolio. The company benefits from structural trends such as rising myopia and an aging population.
- We also introduced Reply, an IT consulting and digital services company with a uniquely decentralised network of niche-specific companies that help clients improve in areas such as resource efficiency and cybersecurity.
- Our position in Cellnex was sold due to the limited potential for tariff increases within a high-inflation environment and we believe it faces significant challenges in managing its cost base and its levered balance sheet.
- The position in veterinary pharmaceutical company Dechra was sold following a bid from private equity.

The economic environment remains challenging, with uncertainties related to inflation, central bank policies, election results and geopolitical developments. In this context, we continue to believe that our approach is the right one: managing a focused portfolio of quality companies with a durable competitive position, strong management of material ESG aspects and the ability to adapt to change. We believe such companies, which we call transition winners, are well-equipped to thrive in the long run, even more so during uncertain times, as their focus on sustainability continues to reinforce their competitive advantage.

Event Driven – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 4.25%. Over the same period, the S&P 500 Index* (Total Return, Net of Tax, USD) (the Index), returned 25.67%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The first half of the year (even starting in November 2022) was one of the most difficult idiosyncratic periods for Risk Arbitrage in decades characterised by multiple deal breaks and legal challenges. We successfully navigated this period and missed all of the deal breaks as a function of our deep fundamental risk-reward based research process and were able to capitalise on wider spread levels in opportunities where regulatory bodies ultimately were unsuccessful in their pursuit to block transactions.
- After a series of court losses, regulators took a more rational approach to evaluating transactions. This does not mean that regulators will not pursue antitrust aggressively or that the pendulum has swung fully back, but it does suggest that certain situations may become more investable. Moreover, this slightly relaxed posture is likely to encourage more transactions as boards digest the current regulatory environment.
- On the Market Neutral Catalyst side, the opportunity set was robust as more companies began pursuing or considering various forms of corporate activity to drive shareholder value in an uncertain macro environment. That being said, we need to remain patient to realise this value creation as there will be times in beta fuelled rallies (e.g., January, June, November and December) where running a tightly hedged beta and style factor neutral book will create short-term headwinds.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Both the Risk Arbitrage and Market Neutral Catalyst strategies contributed positively
 - Top contributors to performance were Uber Technologies (Catalyst), Meta Platforms (Catalyst), US Steel (Risk), Activision Blizzard (Risk) and Broadcom (Catalyst)
- Detractors from absolute returns:
 - The top five detractors were Willscot Mobile Mini (Catalyst), NextEra Energy (Catalyst), Dollar Tree (Catalyst), Bristol-Meyers Squibb (Catalyst) and PayPal (Catalyst)

Overview of investment activities during the reporting period

- There was a smaller investible universe for the Risk Arbitrage strategy in 2023. Straight forward transactions with limited regulatory complexity were priced too tightly and did not provide attractive risk rewards as dedicated Risk Arbitrage strategies chased this set of "safe" transactions. The universe of transactions that we invested in provided very attractive absolute and risk adjusted returns for the Portfolio despite the lower level of exposure.
- With respect to the Market Neutral catalyst strategy, we found a number of idiosyncratic opportunities to deploy capital. We skewed to a higher percentage of soft versus catalyst names as we believe we can more efficiently hedge these names. We also kept average position size somewhat smaller as we build conviction in the theses and the duration to the actual event shortens.

We anticipate Risk volumes to ramp significantly in early 2024 as companies pursue growth following years of market volatility, inflation and supply chain disruptions and cost of capital pressures abate. The world continues to feel reasonably unstable with geopolitics, macro moves, and a very uncertain election year in the US. We continue to find idiosyncratic ideas with specific catalysts that we believe can create or destroy value and hedge situations with the goal of protecting capital in all scenarios.

* The Portfolio is actively managed and does not intend to track the Index which is included here for performance comparison purposes.

Global Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 6.54%. Over the same period, the benchmark index, the Bloomberg Global Aggregate Index (Total Return, Unhedged, USD) (the Index), returned 5.72%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- In an effort to combat inflation, the hiking cycle continued for developed markets central banks, with the Federal Reserve and European Central Bank increasing policy rates by 100 basis points (bps) and 200bps, respectively.
- Interest rate volatility was elevated throughout the year. In November and December, with inflation appearing to be in hand and expectations for a growth slowdown, the market increasingly priced aggressive near-term interest rate cuts, helping fuel a substantial rally in fixed income and equities.
- Credit spreads tightened over the period, reflecting better than expected economic performance and steady demand for credit assets. Global investment grade and non-investment grade credit spreads tightened 32bps and 122bps, respectively.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweight exposure in agency mortgage-backed securities (MBS) and allocation to credit risk transfers
 - Overweight exposure and security selection within global investment grade credit
 - Underweight exposure in UK rates, overweight exposure in core European rates and yield curve positioning in the US
- Detractors from relative returns:
 - Underweight exposure in China and Japan rates
 - The Portfolio's active currency overlay

Overview of investment activities during the reporting period

- We increased exposure to agency MBS and European investment grade credit, and reduced exposure to US investment grade credit and global sovereigns.
- We raised the Portfolio's duration by approximately three-quarters of a year and remain underweight duration at the headline level.

With inflation trends improving and central banks' interest rates likely at their peak, we believe that economic growth outcomes will become increasingly important drivers of fixed income returns. We favour holding up to five-year-maturity fixed income, which allows for locking in still-elevated rates before they fade away. We anticipate that the bifurcation in credit markets favouring quality may persist. Overall, we believe that 2024 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building portfolios.

Global Diversified Income FMP – 2024 – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 5.84%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- In an effort to combat inflation, the hiking cycle continued for developed markets central banks, with the Federal Reserve and European Central Bank increasing policy rates by 100 basis points (bps) and 200bps, respectively.
- Interest rate volatility was elevated throughout the year. In November and December, with inflation appearing to be in hand and expectations for a growth slowdown, the market increasingly priced aggressive interest rate cuts in the near-term, helping fuel a substantial rally in both government yields and risky assets.
- Credit spreads tightened over the reporting period, reflecting better than expected economic performance and steady demand for credit assets. Global investment grade and non-investment grade credit spreads tightened by 32bps and 122bps, respectively.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Exposure to developed markets investment grade credit
 - Exposure to developed markets high yield
 - Exposure to emerging markets corporates
- Detractors from absolute returns:
 - There were no material detractors from a sector perspective

Overview of investment activities during the reporting period

- The Portfolio was invested across credit sectors, rating cohorts and geographies.
- At the end of the period, investment grade credit was the largest sector allocation, followed by emerging markets corporates and high yield.

With inflation trends improving and central banks' interest rates likely at their peak, we believe that economic growth outcomes will become increasingly important drivers of fixed income returns. We favour holding up to five year maturity fixed income, which allows for locking up still-elevated rates before they fade away. We anticipate that the bifurcation in credit markets favouring quality will persist. Overall, we believe that 2024 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building portfolios.

Global Equity Megatrends – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 22.91%. Over the same period, the benchmark index, the MSCI World Index (Total Return, Net of Tax, USD) (the Index), returned 23.79%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Over the past year, global equity markets surprised most prognosticators generating healthy, positive returns. Investors took geopolitical conflicts in stride and, at a macro level, healthy labour markets across most major economies continued to support consumption globally (ex-China). Inflationary pressures eased further as supply chains continued their path to normalisation.
- Business performance was varied with macroeconomic angst and the long tail of COVID-19 imbalances impacting results.
- Valuation distortions across equity markets persist in our view, with index darlings and "story stocks" continuing to carry full multiples while many other companies are left for dead.
- Implied values for a significant number of our Portfolio companies continue to reflect a high degree of forward uncertainty, providing an encouraging foundation for patient investors.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Top contributors included Expedia Group (Evolving Global Consumer), Uber (Evolving Global Consumer) and Vistra Corp. (Energy Infrastructure).
- Detractors from absolute returns:
 - ModivCare (Health & Wellbeing), Alibaba (Evolving Global Consumer) and Criteo (Smart Systems) were among the top detractors to performance.

Overview of investment activities during the reporting period

- During the past year, we added two Portfolio companies, namely Uber (Evolving Global Consumer) and Element Solutions (Energy Efficiency) and we increased exposure to ModivCare (Health Wellbeing) and Criteo (Smart Systems).
- We funded these investments by reducing or terminating our investments in Quanta Services (Energy Infrastructure), AON (Health Wellbeing), Element Fleet Management (Energy Efficiency) and Paya Holdings (Evolving Global Consumer), which was acquired early in the year.

We remain enthusiastic about our Portfolio holdings. These businesses are anticipated to grow free cash flows at 23% annually in the coming years, but trade at very high free cash flow yields; in fact, at valuations that we have not seen in a very long time. This setup offers an attractive risk/return trade-off, with a significant margin of safety in our view. Furthermore, it is also encouraging that many Portfolio companies are 'delivering efficiencies' such as technologies, products and services that enable their customers to do 'more with less'. While this is always a valuable business proposition, it becomes particularly relevant during economic downturns.

Global Flexible Credit Income – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 12.52%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- In an effort to combat inflation, the hiking cycle continued for developed markets' central banks, with the Federal Reserve and European Central Bank increasing policy rates by 100 basis points (bps) and 200bps, respectively.
- Interest rate volatility was elevated throughout the year. In November and December, with inflation appearing to be in hand and expectations for a growth slowdown, the market increasingly priced aggressive interest rate cuts in the near-term, helping fuel a substantial rally in both government yields and risk assets.
- Credit spreads tightened over the reporting period, reflecting better than expected economic performance and steady demand for credit assets. Global investment grade and non-investment grade credit spreads tightened by 32bps and 122bps, respectively.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Exposure to developed markets high yield and emerging markets debt were the largest contributors.
 - Exposure to investment grade credit and collateralised loan obligations were secondary contributors.
 - Exposure to securitised credit contributed modestly.
- Detractors from absolute returns:
 - There were no material detractors from a sector perspective.

Overview of investment activities during the reporting period

- The Portfolio was invested across credit sectors, rating cohorts and geographies.
- We reduced exposure to US high yield, and we increased exposure to European high yield, emerging markets debt, European investment grade credit and securitised credit.
- We increased the Portfolio's duration by approximately one and three-quarter years.

With inflation trends improving and central banks' interest rates likely at their peak, we believe that economic growth outcomes will become increasingly important drivers of fixed income returns. We favour holding up to five-year-maturity fixed income, which allows for locking up still-elevated rates before they fade away. We anticipate that the bifurcation in credit markets favouring quality will persist. Overall, we believe that 2024 could be a rewarding time for global bond investors who focus on fundamentals and selectivity in building portfolios.

Global High Yield SDG Engagement – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 10.29%. Over the same period, the benchmark index, the ICE BofA Global High Yield Constrained Index (Total Return, Hedged, USD) (the Index), returned 12.97%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The global high yield bond market finished the reporting period with strong returns driven by late-year risk-on sentiment as spreads declined and markets priced in rate cuts for 2024 despite resilient economic data. For calendar year 2023, high yield bond returns were the highest since 2019.
- Outside of the higher risk Eastern European and China Property sectors, global high yield issuers' aggregate fundamentals of Earnings Before Interest, Tax, Depreciation and Amortisation growth, free cash flow, interest coverage and leverage remained in somewhat favorable ranges and earnings season overall came in better than feared. Also, the outlook for defaults remained relatively benign.
- Default rates in the US, Europe and other developed markets were expected to remain around average after having moved up from the all-time lows of 2022. While emerging markets (EM) defaults have risen, we focused on select opportunities away from the higher risk regions and sectors. Our outlook for around average default risk is based on our bottom up assessment of issuers and driven by the higher-quality ratings mix in global high yield (56% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - From a sector perspective, positioning in Automotive, Building Materials and Chemicals.
 - From a ratings perspective, an underweight to BB rated issuers.
- Detractors from relative returns:
 - From a sector perspective, positioning in Energy, Wirelines and Financial Other.
 - From a ratings perspective, positioning in B, CCC & below, and BB rated issuers.

Overview of investment activities during the reporting period

- In our high yield strategies, we rotated selectively into higher quality BB's where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCC's is where we have a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market and across regions to maximise resilience to inflationary and labour cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to center the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we view as resilient in the current environment. The Portfolio is overweight US and European high yield and underweight EM high yield.

We believe high yield valuations are providing more-than-adequate compensation for the around average default outlook, will continue to provide durable income and are attractive compared to other fixed income alternatives. As credit dispersion has risen, our analysts remain keenly focused on the specific fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. Despite the potential for short-term volatility resulting from uncertainty on economic growth, we believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only our "best ideas" into portfolios, will position us well to take advantage of any volatility.

Global High Yield Sustainable Action* – Investment Manager's Report

For the period beginning 1 January 2023 through the Portfolio's close on 16 June 2023, the total return of the USD I Accumulating Class was 4.32%. (Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The global high yield bond market finished the reporting period with solid returns, mostly driven by more resilient than expected economic data and earnings results from most issuers. This was despite bouts of volatility from concerns over higher inflation, more hawkish central banks, the mini banking crisis and rising recession risk in the first half of the year.
- Default rates in US, Europe and other developed markets are expected to remain around average after having moved up from the all-time lows of last year. While emerging markets (EM) defaults are on the rise, we are focused on select opportunities away from the higher risk regions and sectors. For EM high yield corporates, the overall default rate started this year in the mid-teens due to non-payment by Russian and Ukrainian issuers, and due to the elevated defaults in the China property sector. Excluding those specific areas, we expect the EM high yield corporate default rate to be relatively benign as EM corporates have entered this period with reasonable liquidity on average.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Positioning in B, BB, CCC & below and BBB & above rated issuers
 - Positioning in Support-Services, Healthcare and Building Materials
- Detractors, neutral or least additive to absolute returns:
 - Positioning in Not Rated issuers was neutral to returns
 - Positioning in Media-Cable detracted
 - Printing & Publishing and Paper added the least to returns

Overview of investment activities during the reporting period

- The Portfolio closed on 16 June 2023.

* Portfolio liquidated on 16 June 2023.

Global Investment Grade Credit – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 9.60%. Over the same period, the Bloomberg Global Aggregate Corporate Index (Total Return, Hedged, USD) (the Index), returned 9.10%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- 2023 started with considerable volatility in credit markets with spreads tightening due to anticipated moderation in US inflation and prospects for improving global growth post China's surprise announcement to rapidly reopen its economy. In early March, credit spreads widened on banking sector events with Silicon Valley Bank placed into receivership on 10 March, and the Swiss Government brokered transaction for UBS to take over Credit Suisse on 19 March. Later in the first half of the year, banking sector concerns waned as it became apparent that other US regional banks as well as global systemically important banks were better insulated from these pressures.
- Tight financial conditions continued due to banking sector stress and major central banks increasing policy rates during the year citing still high rates of inflation. The Federal Reserve (Fed) increased the target range of the Federal Funds rate from 4.5% to 4.75% at the start of 2023 to 5.25% to 5.5% in July 2023 and maintained the target range at this level. The European Central Bank raised the deposit facility rate from 2.00% in January 2023 to 4.00% in September 2023 also maintaining the rate steady since. Finally, the Bank of England also raised the UK base rate by 175 basis points during the year to 5.25% in August 2023 and has maintained it since. All major central banks acknowledge that policy is currently restrictive with intended impact of downward pressure on inflation.
- As peak policy rates came into view, government bond yields moved lower in the fourth quarter, retracing the move higher earlier in the year. In particular, the Fed held rates steady during its final meeting of 2023 at 5.25 to 5.50%. Following the policy meeting, the Fed's statement acknowledged that economic activity had slowed from its pace in the third quarter, and that the labour market, while still strong, had moderated with unemployment remaining low. Fed projections now include three possible rate cuts in 2024. The Fed's 'pivot' in policy rate expectations spurred a material rally in fixed income and equity markets toward year end.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Senior unsecured bonds from the Technology and Communications, Basic Materials, Real Estate, and Consumer Sectors industries drove outperformance.
 - Subordinated Tier 2 debt from Insurers also made a positive contribution.
- Detractors from relative returns:
 - The Banking sector slightly detracted from performance.

Overview of investment activities during the reporting period

- We participated in a number of attractively priced primary new issue deals in 2023 which generated strong relative outperformance for the Portfolio. We purchased bank Tier 2 subordinated bonds from large UK and European national champions and also added to our strong conviction view on the large US money center banks during periods of market volatility in early March 2023. We maintained our position in the senior unsecured holdco bonds of Credit Suisse which saw spreads rapidly tighten post the brokered takeover by UBS with material outperformance in spreads.
- Portfolio duration position was largely maintained near benchmark levels during the year; however, during periods of relative underperformance of sterling corporate bond yields in the first half of 2023 we increased our sterling duration position. We also increased the Portfolio's US dollar duration position in the third quarter of 2023 when US corporate bond yields underperformed on a relative basis.

Heading into 2024, we remain overweight some of the more defensive sectors like Utilities and Banking as well as some of the higher beta and cyclical sectors like Real Estate. We continue to be overweight sectors that have strong fundamentals and are currently in deleveraging mode like Communications which we believe will continue to benefit from a rising rate environment. We have an underweight in sectors such as consumer non-cyclicals that we view as being at a higher risk of using debt to finance shareholder returns via stock buybacks and merger and acquisition and trade at relatively tight valuations.

Global Opportunistic Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 6.23%. Over the same period, the benchmark index, the Bloomberg Global Aggregate Index (Total Return, Hedged, USD) (the Index), returned 7.15%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- In an effort to combat inflation, the hiking cycle continued for developed markets' central banks, with the Federal Reserve and European Central Bank increasing policy rates by 100 basis points (bps) and 200bps, respectively.
- Interest rate volatility was elevated throughout the year. In November and December, with inflation appearing to be in hand and expectations for a growth slowdown, the market increasingly priced aggressive near-term interest rate cuts, helping fuel a substantial rally in fixed income and equities.
- Credit spreads tightened over the period, reflecting better than expected economic performance and steady demand for credit assets. Global investment grade and non-investment grade credit spreads tightened 32bps and 122bps, respectively.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Allocations to European high yield, emerging markets debt, and credit risk transfers
 - Security selection in global investment grade credit and agency mortgage-backed securities (MBS)
 - Overweight exposure in agency MBS
 - The Portfolio's active currency overlay
- Detractors from relative returns:
 - Underweight exposure in global investment grade credit
 - Underweight exposure in covered bonds

Overview of investment activities during the reporting period

- Over the 12-month period we increased exposure to agency MBS and investment grade credit, and we reduced exposure to global high yield and emerging markets debt.
- In the second quarter we moved from underweight to overweight duration; as of year-end, we maintain the overweight at reduced levels, as we realised profits following the fourth quarter rally in government yields.

With inflation trends improving and central banks' interest rates likely at their peak, we believe that economic growth outcomes will become increasingly important drivers of fixed income returns. We favour holding up to five-year-maturity fixed income, which allows for locking up still-elevated rates before they fade away. We anticipate that the bifurcation in credit markets favouring quality will persist. Overall, we believe that 2024 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building portfolios.

Global Real Estate Securities – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 7.65%. Over the same period, the benchmark index, the FTSE EPRA/Nareit Developed Real Estate Index (Total Return, Net of Tax, USD) (the Index), returned 9.74%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The global equity market saw a significant rebound in the year, supported by better economic growth, softening inflation and an expectation of major central banks pursuing monetary easing.
- Credit tightening after the US regional banking crisis and low transaction volumes impacted sentiment on real estate, but the overhang was alleviated by strong signals of interest rates having peaked.
- A sharp market rebound from late October lifted the return of the Index to a positive 9.74% for the year while MSCI ACWI posted a 22.20% return over the same period.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweight to Spain and underweight to Japan
 - Security selection within the Office sector
 - Security selection within the Residential sector
- Detractors from relative returns:
 - Underweights to the US and Germany
 - Security selection within the Retail sector
 - Security selection within the Real Estate Holding and Development sector

Overview of investment activities during the reporting period

- While the Portfolio's sector positioning was mainly driven by bottom up stock selection, at the end of the reporting period its largest overweight allocations versus the Index were Infrastructure REITs and Storage. In contrast, the Portfolio's largest sector underweights relative to the Index were Diversified and Office.
- The largest country overweights were in the UK and Spain, and the largest underweights were in the US and Australia.

After a challenging 2023 that was largely dictated by the Federal Reserve (Fed) tightening campaign, the rate environment set up for 2024 looks promising to us with the Fed largely on hold for the first half of 2024 and investors anticipating rate cuts in the second half of the year. However, this is against a backdrop of greater economic uncertainty. Most European companies made progress in their deleveraging initiatives and avoided distressed asset sales or major credit downgrades. We anticipate the companies' outlook to become more bifurcated in 2024 as refinancing pressure builds up among the weaker firms while stronger firms with higher asset quality pursue new investments in attractive sectors including Student Housing, Self-Storage, Data Centers and Logistics. Japan was a bright spot in Asia, but the stock rally appeared to have reflected the positive outlook. Australia and Singapore showed steady fundamentals. For Hong Kong, the falling trend of house prices and the indirect effect of geopolitical tension on the China economy are the main concerns. Overall pressures should result in greater attention to valuations, earnings quality, and strength in business fundamentals which we believe will benefit well capitalised REITs in select sectors which have demand drivers that are less cyclical or not overly dependent on the consumer.

Global Sustainable Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 23.78%. Over the same period, the benchmark index, the MSCI World Index (Total Return, Net of Tax, USD) (the Index), returned 23.79%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Equity markets began 2023 on a strong note, rallying as inflation moderated, but faced headwinds from central banks that continued to hike interest rates as the year progressed.
- By mid-year, recession concerns and financial sector stress, including the collapse of notable banks earlier in the year, led to increased volatility and market weakness.
- However, markets ended the year with robust performance, supported by optimism for easing monetary policies and declining long-term interest rates as inflation pressures receded.
- The US economy showed strong growth, contrasting with Europe and Japan, where economic slowdowns were evident.

What affected the Portfolio's performance during the reporting period?

- Contributors to relative returns:
 - An overweight versus the Index in Communication Services and IT
 - Stock selection within Financials
 - At a stock level, our holdings in 3i Group (Financials), Amazon.com (Consumer Discretionary), Alphabet Inc (Communication Services), Adobe and Microsoft Corporation (IT) contributed most to performance.
- Detractors from relative returns:
 - Stock selection within IT and Consumer Staples
 - An underweight in Utilities, Materials, Real Estate and, in particular, Energy
 - Stock holdings in Estée Lauder, Bakkafrøst (Consumer Staples), Alfen (Industrials) and SolarEdge Technologies (IT) were the largest detractors.

Overview of investment activities during the reporting period

- We introduced Synopsys, a producer of semiconductor design software, which will be an important beneficiary of the further digitalisation of society, including the adoption of AI.
- We also introduced L'Oréal to the Portfolio as we anticipate its very strong position in the beauty market, and its continuous innovation initiatives, to drive market share gains.
- The position in dating service provider Match was exited due to a lack of clarity on Tinder's subscriber growth and the anticipated challenges of customer churn and a softening economy.

The economic environment remains challenging, with uncertainties related to inflation, central bank policies, election results and geopolitical developments. In this context, we continue to believe that our approach is the right one: managing a focused Portfolio of quality companies with a durable competitive position, strong management of material ESG aspects and the ability to adapt to change. We believe such companies, which we call transition winners, are well-equipped to thrive in the long run, even more so during uncertain times, as their focus on sustainability continues to reinforce their competitive advantage.

Global Sustainable Value – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 16.70%. Over the same period, the MSCI All Country World Value Index (Total Return, Net of Tax, USD) (the Primary Index) and the MSCI All Country World Index (ACWI) (Total Return, Net of Tax, USD) (the Secondary Index), returned 11.81% and 22.20%, respectively. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Global equity markets rallied this year, the promise of AI drove returns, while globally declining inflation kept market sentiment optimistic throughout the rest of 2023.
- The Federal Reserve, European Central Bank, and Bank of England raised rates steadily throughout the year and signaled a potential rate cut cycle in 2024.
- The "Magnificent Seven"¹ stocks were the top contributors of strength in the US as well as globally.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweight in IT compared to the Primary Index
 - Security selection in Communication Services and Industrials
 - Security selection in the US
 - Quality, Momentum, and Volatility factors
- Detractors from relative returns:
 - Underweight in Financials compared to the Primary Index
 - Security selection in Health Care
 - Security selection in emerging markets and Japan
 - Value and Dividend Yield factors

Overview of investment activities during the reporting period

- The Portfolio maintained its overweight in IT with the majority of that exposure concentrated in Semiconductor and Hardware industries where we find most value candidates within the sector.
- The Portfolio was positioned toward lower duration, profitable stocks during 2023, while elevated inflation has fallen throughout the year, and rates increased and plateaued.

We believe the Portfolio is well positioned for the market environment heading into 2024. Our stance is that the historic trade-off between interest rates and inflation has returned, and this may help the positioning in our portfolio that favours attractively priced, profitable companies. In addition, against a backdrop of tightening credit and pressured corporate earnings, we are of the view that the Portfolio's focus on good capital discipline may also accrue benefit.

¹ The "Magnificent Seven" is a nickname for seven mega-cap technology-related growth stocks that performed significantly better than the rest of the stocks in the S&P 500® Index, and is comprised of Alphabet (Class A & C), Amazon.com, Apple, Meta Platforms, Microsoft, NVIDIA and Tesla.

High Yield Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 11.36%. Over the same period, the benchmark index, the ICE BofA US High Yield Constrained Index (Total Return, USD) (the "Index"), returned 13.47%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The high yield bond market finished 2023 with strong returns driven by late-year risk-on sentiment as spreads declined and markets priced in rate cuts for 2024 despite resilient economic data. For calendar year 2023, high yield bond returns were the highest since 2019.
- High yield issuers' aggregate fundamentals of Earnings Before Interest, Tax, Depreciation and Amortisation growth, free cash flow, interest coverage and leverage remained in somewhat favourable ranges and earnings season overall came in better-than-feared. Also, the outlook for defaults remains relatively benign.
- While the default rate has risen off the lows in 2022, we anticipate default rates in 2024 to remain in a range that is just below the long-term average. This outlook is based on our bottom-up assessment of issuers and driven by the higher-quality ratings mix in high yield (48% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - From a sector perspective, positioning in Pharmaceuticals, Chemicals and Automotive contributed the most to performance over the period. From a ratings perspective, positioning in BB and Not Rated issuers added the most to performance over the period.
- Detractors from relative returns:
 - From a sector perspective, positioning in Technology, Wirelines and Retailers detracted the most from performance over the period. From a ratings perspective, CCC & below, BBB & above and B rated issuers detracted the most from performance.

Overview of investment activities during the reporting period

- In our high yield strategies, we rotated selectively into higher quality BB rated securities where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCC rated securities is where we have a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience to inflationary and labour cost trends, were they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to center the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we view as resilient in the current environment.

We believe high yield valuations are providing more-than-adequate compensation for the around average default outlook, will continue to provide durable income and are attractive compared to other fixed income alternatives. As credit dispersion has risen, our analysts remain keenly focused on the specific fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. Despite the potential for short-term volatility resulting from uncertainty on economic growth, we believe our bottom up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only our "best ideas" into portfolios, will position us well to take advantage of any volatility.

InnovAsia 5G – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 31.93%. Over the same period, the benchmark index, the MSCI All Country Asia (Total Return, Net of Tax, USD) (the Index), returned 11.07%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Slower pace of rate hikes by the Federal Reserve led to general outperformance of Tech and Growth style equity.
- China's reopening hopes at the start of the year faded and sentiment deteriorated on a slower than expected recovery and limited stimulus.
- Geopolitical tensions added to market volatility and accelerated supply chain reconfiguration trends.
- AI emerged as an investment theme, which led to a rally in related exposures within the Asian tech supply chain.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection in Japan and India, an underweight to China, and overweight to Taiwan and South Korea versus the Index
 - Security selection and an overweight to Semiconductors and Technology Hardware & Equipment versus the Index
 - AI winners in high-performance semiconductors, hardware, and high-speed networking
- Detractors from relative returns:
 - China exposure in the first half of the year
 - Security selection in Media & Entertainment

Overview of investment activities during the reporting period

- Increased Semiconductor exposure given rising strategic value and as cyclical bottoms out
- Increased Hardware/Components exposure in the first quarter through the third quarter on AI trends, and took some profits in the fourth quarter
- Increased Industrials exposure on solid outlook in automation and renewable energy trends
- Significantly reduced China exposure and shifted to India and South Korea
- Took some profits on Taiwan exposure in the second half of the year following strong performance

While the end of the rate hike cycle is in sight, macro uncertainty could persist. We thus continue to emphasise quality but are ready to capture tactical opportunities and position for cyclical growth. We are constructive on the growth opportunity in Asia especially within advanced semiconductors, structural growth in AI, robust 5G & data centre capex, and digital content & lifestyle proliferation.

Japan Equity Engagement – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the JPY I Accumulating Class was 20.17%. Over the same period, the MSCI Japan Small Cap Index (Net) (Total Return, JPY) (the Index), returned 21.09%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Japanese equities saw positive foreign investor inflows in the first half of the year on the back of improving macroeconomic fundamentals highlighted by rising wages and consumer prices, indicating the end may be near for the years of deflation.
- In the second half of the year, the Japanese equity market rally saw momentum wane as global investors speculated the Bank of Japan (BOJ) may adjust the ultraloose monetary policy sooner than expected.
- In the fourth quarter, Japan's small to mid-cap (SMID) market led by quality and growth companies saw positive investor inflows as markets began to price in prospects of interest rate cuts by the Federal Reserve while the BOJ maintained its monetary policy unchanged.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection within core holdings in the Real Estate and Financials sectors.
- Detractors from relative returns:
 - Stock selection among core holdings in the Consumer Discretionary sector.

Overview of investment activities during the reporting period

- Although the Financials and Real Estate sectors faced significant volatility on the back of global investors' expectations that the BOJ would begin normalising its monetary policy, we continued to strategically position in core holdings with both growth potential and prospects for capital efficiency enhancements.
- We also continued to undertake constructive engagements with key holding companies within the Communications and Industrials sectors, resulting in engagement wins.
- Our Consumer Discretionary sector holdings with exposure to China faced a challenging year due to the delayed macroeconomic recovery. We continue to see these companies as leaders in their respective industries and will seek to rebuild our positions once we've determined downside risks have been reflected in their valuations.

We anticipate Japan's economy to see resilience vis-à-vis the rest of the world where the outlook remains uncertain. We believe the Japanese yen may see a gradual appreciation as the BOJ looks to normalise monetary policy while global central banks prepare to cut interest rates. With that backdrop, we view the market environment will be more conducive for active stock-picking within the undervalued Japanese SMID market where companies generate more revenues from the home market and are looking to improve capital efficiencies through balance sheet reforms, which is a key agenda of our engagements with management teams.

Macro Opportunities FX – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the EUR I Accumulating Class was 3.25%. Over the same period, the benchmark index, the ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR) (the Index), returned 2.46%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

In 2023, most major currencies traded in relatively tight ranges. The US dollar traded strongly for much of the year, benefiting from being one of the highest yielding G10 currencies and US economic outperformance. As data started to slow toward the end of the year, attention turned to expectations that the Federal Reserve would have to loosen monetary policy significantly in 2024 and the dollar sold off. The Japanese yen was the weakest performing major currency as the Bank of Japan continued to hold policy rates at 0% making the cost of holding yen versus other major currencies expensive.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweights to the Australian dollar and the New Zealand dollar were the greatest contributors
- Detractors from relative returns:
 - An underweight to the Swedish krona
 - The Japanese yen

Overview of investment activities during the reporting period

- The strategy adopted a more tactical approach to trading throughout 2023.

Looking ahead to 2024, much will depend on whether monetary policy easing does begin and to what extent. Should this not materialise, we would anticipate currencies to continue to trade in tight ranges.

Multi-Asset Income* – Investment Manager's Report

For the period from 1 January 2023 until the Portfolio's close on 6 July 2023, the total return of the USD I Accumulating Class was 2.95%. (Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Despite continued central bank tightening and a regional banking crisis, economic data proved resilient with growth slowing but broadly beating expectations, inflation trending down from peaks, unemployment remaining low and the consumer strong.
- Stock markets performed best, led by mega cap growth stocks, buoyed by excess liquidity, flows and optimism around AI and its implications.
- In most developed market economies inflation readings fell back, largely due to favorable base effects from oil prices moving lower since peaking in June 2022, though core measures remained more persistent. In the UK, wage growth and core services inflation accelerated, causing more hawkish action from the Bank of England.
- Global bond yields moved higher at the short end of the curve, leading to deeper yield curve inversion for many developed markets. Credit performed well as spreads narrowed, with lower grade credits performing best as near-term recession risk receded.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - High income strategies delivered a strong positive contribution to return with both equity and fixed income components additive. The options strategy was also a strong contributor as volatility in equity markets declined.
 - Within equity, the largest contribution came from high dividend developed market equities, followed by emerging markets (EM).
 - Within fixed income, the strongest performing strategy was European high yield bonds off the back of tightening spreads. Long corporate bond, treasuries and EM debt strategies were all also positive.
- Detractors from absolute returns:
 - The uncorrelated strategies component posted a negative return over the period as the tactical and strategic adjustment detracted, driven by short equity and long Japanese yen views.
 - Within equities, the allocation to alternative equity strategies was negative as both listed energy infrastructure and real estate investment trusts underperformed.
 - Within fixed income, the worst performer was the allocation to preferred securities as banking stress weighed over the financial sector, particularly impacting hybrid securities.

Overview of investment activities during the reporting period

- The Portfolio remained diversified across high income strategies; fixed income, high income and alternative equities, options income and uncorrelated strategies.
- During the reporting period, the Portfolio was rebalanced through trimming of the treasury and real estate investment trusts strategies and adding to the EM equity strategy.
- As per the shareholder notice issued on 6 June 2023 on the closure of the Portfolio, the Portfolio management team began liquidating holdings as of 20 June 2023, ahead of the Portfolio termination date 6 July 2023.

*The Portfolio liquidated on 6 July 2023.

Next Generation Mobility – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 29.43%. Over the same period, the MSCI All Country World Index (ACWI) (Total Return, Net of Tax, USD) (the Index) returned 22.20%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Global equities recovered strongly during 2023, registering strong gains for the year. Inflation readings, which had been elevated for most of the post-COVID period, began to cool over the course of 2023. Yields generally increased during the year but retreated considerably late in the fourth quarter owing to the prospect of the Federal Reserve (Fed) tightening cycles nearing their completion and the possibility of interest rate cuts.
- This backdrop resulted in outperformance for growth-oriented equities such as those in the IT sector and mega-capitalisation growth stocks more broadly.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Exposure to the IT sector was the largest positive contributor to relative performance during the period. Unallocated sectors such as Consumer Staples, Energy, Health Care, and Utilities underperformed, positively impacting relative performance.
 - Geographically, exposure to the US contributed the most to relative performance.
- Detractors from relative returns:
 - Exposure to the Materials sector detracted the most from relative performance.
 - Geographically, exposure to China was the biggest detractor.

Overview of investment activities during the reporting period

- Four new positions were added to the Portfolio during the period: Albemarle, LG Energy, BYD, and LG Chemical. Two positions were removed from the Portfolio: Coherent and Chargepoint.

We anticipate the macroeconomic backdrop to remain fluid as central banks seek to restore inflation to targeted levels while also supporting economic growth. Although the lagged effect of more restrictive monetary policy will likely result in slower economic growth, moderating inflation may provide some central banks the opportunity to begin reducing interest rates. Meanwhile, the key pillars of the Next Generation Mobility theme remain intact. We anticipate additional penetration gains and healthy growth for both autonomous and electric vehicles, underpinned by supportive regional policies among other factors. We maintain our focus on high quality, fundamentally attractive companies that are key enablers and beneficiaries of this long-term theme.

Next Generation Space Economy – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 27.26%. Over the same period, the benchmark index, the MSCI All Country World Index (ACWI) (Total Return, Net of Tax, USD) (the Index) returned 22.20%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

As 2023 concluded, the narrative of the global economy was one of resilience and a renewed interest within equity markets. Major indices staged a comeback, erasing the previous year's declines. The spotlight shone brightly on the Technology sector, with AI-centric firms and Semiconductor stalwarts leading the way driven primarily by investor enthusiasm and a Telecommunications market rally. Contrarily, the more traditional defensive areas of the market, such as Utilities, Energy, and Health Care, struggled to maintain the pace and lagged for the year.

Throughout the year, markets also saw renewed and heightened geopolitical tensions rippling throughout the global economy; Russia/Ukraine, Israel/Hamas, US/China all added layers of complexity to investor sentiment. In addition to these dynamics, central bank policies came into focus as nations worked through curbing elevated inflation. These rate hikes originally left a cautious outlook and fear of a hard-landing recession. As the year came to a finish, expectations of the Federal Reserve's impending rate cuts and a tempered labour backdrop helped equities rally into the last two months of the year and paint a more positive outlook for equities in 2024.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Strong security selection in Industrials specifically within Aerospace & Defense.
 - Structural underweight to less thematically relevant sectors (e.g., Health Care) which underperformed throughout the year.
- Detractors from relative returns:
 - Security selection and underweight to Communication Services (lack of exposure to mega-cap tech such as META Platforms and Google).
 - Slight cash drag from opportunistically deploying capital upon inflows as markets have rallied.

Overview of investment activities during the reporting period

- The Portfolio continued to take a barbell approach between growth and defensive positions. We used dislocations as opportunities to initiate and scale both fundamentally and thematically relevant positions.
- Increased number of securities within the Portfolio which addressed the growing multi-sector opportunity set and helped diversify risk.

In 2023, we witnessed a multitude of advancements and announcements within the Space Ecosystem, affecting a wide range of industries, businesses, and nations. The Space Economy saw remarkable diversification into Telecom with the introduction of satellite-to-cell services; Insurance, where companies such as Swiss-Re leveraged space technology for risk intelligence and weather analytics; and Agriculture where John Deere announced a satellite RFP (request for proposal) to help connect their tractors globally. Moreover, the surge of the so-called "Space Race 2.0" was evident when India became the fourth country to achieve a lunar landing in July, and even further into Japan as highlighted by a few new initial public offerings for space-oriented firms. This enthusiasm is a testament to the growing revenue streams in the sector, driven by robust demand, enhanced capabilities, and the broadening of end markets. Our investment strategy remains focused on fundamentally strong ideas tied to the Space theme, and we are confident that the Portfolio is strategically positioned to capitalise on the anticipated expansion.

Responsible Asian Debt – Hard Currency – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 6.45%. Over the same period, the benchmark index, the JPM Asia Hard Currency Index (Total Return, USD) (the Index), returned 7.02%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The year 2023 was marked by high interest rate volatility, driven by continued interest rate hikes by the Federal Reserve, loss of economic momentum in China over the year, as well as heightened uncertainty over the trajectory of future growth across the region.
- The Asia Debt Hard Currency asset class showed fundamental resilience over the year while technical factor also played a significant role in supporting the asset class as US dollar net issuances reached a historical low.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - On a country level, key contributors to positive relative return came from Sri Lanka, India, South Korea and Indonesia.
 - Top overweights that contributed positively in terms of sectors versus the Index were Financials, Utilities and Industrials
- Detractors from relative returns:
 - The main detractor to performance over the year came from the Portfolio's allocation to China due to ongoing volatility in the high yield (HY) property space.

Overview of investment activities during the reporting period

- Over the reporting period, the Portfolio increased exposure to South Korea, Singapore and Sri Lanka, amongst others.
- Despite having taken partial profits in Sri Lanka sovereign, we retained an overall overweight stance.
- The Portfolio reduced exposure to China, Hong Kong and Macau over the period, amongst others.

Looking ahead, we anticipate Asian emerging markets debt to be supported by an environment of slower but not recessionary US growth, lower global yields, and a widening growth pickup generally for emerging versus developed countries. Questions remain around China's relatively weak demand recovery, deflation concerns, and structural headwinds facing the economy. For the rest of the region, we continue to see structural strengthening of India and Indonesia's macro fundamentals, such as more robust external accounts. From a default perspective, we believe defaults may remain low for Asia ex-China and stress to remain concentrated in the China HY property sector. Outside of China, we see opportunity particularly across South and Southeast Asia, including India, given attractive fundamentals and valuations, especially in the Renewable Energy sector.

Short Duration Emerging Market Debt – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 8.06%. Over the same period, the benchmark index, the ICE BofA 3-Month US Treasury Bill Index (Total Return, USD) (the Index) returned 5.01%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Overall market sentiment was primarily driven by developments around inflation and monetary policy. US Treasury 2-year yields were very volatile, rising well over 5% before declining sharply in the last quarter and ending the year with little changed at 4.25% amid signs that the Federal Reserve hiking cycle had ended.
- Defaulted Emerging Markets (EM) countries continued to make progress towards restructuring agreements with official and private creditors.
- EM sovereign spreads tightened to 384 basis points (bps) from 453bps on average, with a peak of 510bps in March around the banking crisis in the US and Europe. EM corporate spreads also tightened to 273bps from 308bps.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Sovereign holdings in El Salvador were the largest contributor, on the back of strong fiscal performance, followed by sovereign holdings in Sri Lanka, Argentina and Colombia.
 - On the corporate side, the main contributors included positions in the Mining and Renewable Energy sectors in India, and holdings in the Energy and Bank sectors in Colombia.
- Detractors from relative returns:
 - Sovereign exposure in Ecuador was the largest detractor, with bonds under pressure from rising political risks.
 - Corporate positioning in the Brazilian Industrial sector was the other main detractor over this period.

Overview of investment activities during the reporting period

- The Portfolio maintained a balanced allocation to EM Corporates and Sovereigns/Quasi-sovereigns and a duration close to 2 years.
- We added exposure to high quality issuers from South Korea across sectors via the primary market, and to issuers rated BB where we see improving credit fundamentals including Colombia and Serbia.
- We reduced exposure in China amid tight valuations in different names and as we see ongoing headwinds for the property sector. We also reduced exposure in Qatar, Oman as spreads have tightened.

We anticipate the EM debt asset class to be supported in 2024 by an environment of slower but not recessionary US growth, lower global yields, and a widening growth pickup for emerging versus developed countries. We see limited risk of EM sovereign defaults this year, and increased International Monetary Fund (IMF) engagement by different EM countries should support funding needs and reform agendas. Also, in EM high yield corporates we see receding default risks, with default rates anticipated to decline to 4.8% in 2024 from 7.8% last year. While valuations have become relatively expensive in parts of the asset class, such as in different investment grade sovereigns, we continue to see opportunities for spread compression across various issuers, particularly in the high yield space. The key risks to our constructive view are either an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes, or the unfolding of a deep global recession which would push EM risk premia materially higher.

Short Duration High Yield SDG Engagement – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 9.93%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The high yield bond market finished the reporting period with strong returns, driven by late-year risk-on sentiment as spreads declined and markets priced in rate cuts for 2024 despite resilient economic data. For calendar year 2023, high yield bond returns were the highest since 2019.
- High yield issuers' aggregate fundamentals of Earnings Before Interest, Tax, Depreciation and Amortisation growth, free cash flow, interest coverage and leverage remained in somewhat favourable ranges and earnings season overall came in better than feared. Also, the outlook for defaults remains relatively benign.
- While the default rate has risen from the lows in 2022, we anticipate default rates in 2024 to remain in a range that is just below the long-term average. This outlook is based on our bottom up assessment of issuers, and is driven by the higher-quality ratings mix in high yield (48% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - From a sector perspective, positioning in Midstream Energy, Building Materials and Cable/Satellite.
 - From a ratings perspective, positioning in issuers rated B, BB, CCC and BBB.
- Detractors from absolute returns:
 - From a sector perspective, positioning in Industrial Other and Gaming and Lodging.
 - From a ratings perspective, there were no detractors.

Overview of investment activities during the reporting period

- In our high yield strategies, we rotated selectively into higher quality BBs where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCCs is where we have a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience to inflationary and labor cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to center the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we view as resilient in the current environment.

We believe high yield valuations are providing more-than-adequate compensation for the around average default outlook, will continue to provide durable income and are attractive compared to other fixed income alternatives. As credit dispersion has risen, our analysts remain keenly focused on the specific fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. Despite the potential for short-term volatility resulting from uncertainty on economic growth, we believe our bottom up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only our "best ideas" into portfolios, will position us well to take advantage of any volatility.

Strategic Income – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 8.88%. Over the same period, the benchmark index, the Bloomberg US Aggregate Bond Index (Total Return, USD) (the Index), returned 5.53%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- In an effort to combat inflation, the hiking cycle continued for developed markets central banks, with the Federal Reserve increasing the policy rate by 100 basis points (bps).
- Interest rate volatility was elevated throughout the reporting period. In November and December, with inflation appearing to be in hand and expectations for a growth slowdown, the market increasingly priced aggressive near-term interest rate cuts, helping fuel a substantial rally in fixed income and equities.
- Credit spreads tightened over the reporting period, reflecting better than expected economic performance and steady demand for credit assets. US investment grade (IG) and non-investment grade credit spreads tightened 28bps and 144bps, respectively.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Allocations to US and European high yield, collateralised loan obligation (CLO), credit risk transfers, emerging markets debt, US Treasury Inflation-Protected Securities and municipal bonds.
 - Security selection in IG credit and agency mortgage-backed securities (MBS)
 - The Portfolio's duration underweight
- Detractors from relative returns:
 - Underweight exposure to IG credit
 - Allocation to financial hybrids

Overview of investment activities during the reporting period

- In terms of positioning adjustments, during the year we reduced exposure to US high yield, nominal US Treasuries and IG credit.
- We increased exposure to agency MBS, CLOs and European high yield.
- We reduced the Portfolio's duration by roughly one and a half years at the headline level.

With inflation trends improving and central banks' interest rates likely at their peak, we believe that economic growth outcomes will become increasingly important drivers of fixed income returns. We favour holding up to five-year-maturity fixed income, which allows for locking up still-elevated rates before they fade away. We anticipate that the bifurcation in credit markets favouring quality will persist. Overall, we believe that 2024 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building portfolios.

Sustainable Asia High Yield – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 2.04%. Over the same period, the benchmark index, the JPMorgan ESG Asia Credit (JSEC JACI) – High Yield Index (Total Return, USD) (the Index), returned 4.07%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The year 2023 was marked by high interest rate volatility, driven by continued interest rate hikes by the Federal Reserve, loss of economic momentum in China over the year as well as heightened uncertainty over the trajectory of future growth across the region.
- Asian high yield credit markets posted a positive return overall for the year and many sectors showed fundamental resilience, however certain sectors, primarily the China high yield (HY) property sector, continued to see high volatility.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - On a country level, key contributors to positive relative return came from Sri Lanka, Macau, Malaysia and India.
 - Key overweights that contributed positively in terms of sectors versus the Index included Telecommunications, Metals & Mining and Consumer.
- Detractors from relative returns:
 - The main detractor to performance over the year came from the Portfolio's allocation to China Real Estate due to ongoing volatility in the HY property space.

Overview of investment activities during the reporting period

- Over the reporting period, the Portfolio increased exposure to South Korea, Macau and Philippines, amongst others.
- The Portfolio reduced exposure to Hong Kong, Singapore and China, amongst others.

Looking ahead, we anticipate Asian emerging markets debt to be supported by an environment of slower but not recessionary US growth, lower global yields, and a widening growth pickup generally for emerging versus developed countries. Questions remain around China's relatively weak demand recovery, deflation concerns, and structural headwinds facing the economy. For the rest of the region, we continue to see structural strengthening of India and Indonesia's macro fundamentals, such as more robust external accounts. From a default perspective, we believe defaults may remain low for Asia ex-China and stress to remain concentrated in the China HY property sector. Outside of China, we see opportunity particularly across South and Southeast Asia, including India, given attractive fundamentals and valuations, especially in the Renewable Energy sector.

Sustainable Emerging Market Corporate Debt – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 7.88%. Over the same period, the benchmark index, the JPMorgan JESG CEMBI Broad Diversified Index (Total Return, USD) (the Index), returned 9.22%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Overall market sentiment was driven by developments around inflation and monetary policy as expectations around any Federal Reserve action shifted from the first to second half of the year based on economic data.
- China's reopening was a supportive theme early in the year while defaulted names continued to make progress towards restructuring agreements with official and private creditors.
- Emerging markets (EM) sustainable corporate spreads tightened to 284 basis points (bps) from 323bps at the start of the year, with a peak of 368bps in March. Ukraine was the best performing market in the reporting period, followed by Iraq and Ghana, while Poland and China were the worst performers with negative returns.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweight to Argentina following its presidential elections and security selection in Saudi Arabian utilities.
 - Overweight to Indian renewable energy companies.
- Detractors from relative returns:
 - Overweight exposure to China which underperformed in the year as growth slowed and the property market continued to falter.
 - Underweight to Ukraine which saw some improvements in the corporate space.
 - Positioning in Brazilian chemical companies.

Overview of investment activities during the reporting period

- We entered the year with an overweight to high yielding corporates. During the year, we reduced exposure to the BB-rated space and added to the AA-rated bucket.
- By sector, we increased exposure to Oil & Gas issuers. We were also active within the Financials sector, ending the year with higher overall exposure. We trimmed exposure to the Metals & Mining sector as prices, especially in iron ore, generally declined. We also trimmed exposure to the Telecommunications sector where some issuers came under pressure.
- By country, we added exposure to Turkey as the policy makers returned to more orthodox policies, the UAE where the new issues offered attractive premiums and we have a positive outlook on the Financials sector, and Argentina where a new government is supportive for corporate issuers. We reduced exposure to South Africa, Qatar, China, and Brazil.

We anticipate the EM debt asset class to be supported in 2024 by an environment of slower but not recessionary US growth, lower global yields, and a widening growth pickup for emerging vs. developed countries. We see limited risk of EM sovereign defaults, and increased International Monetary Fund (IMF) engagement by different EM countries should support funding needs and reform agendas. While valuations have become relatively expensive in parts of the asset class, such as in investment grade, we continue to see opportunities for spread compression across various issuers. The key risks to our constructive view are either an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes, or the unfolding of a deep global recession which would push EM risk premia materially higher.

Sustainable Emerging Market Debt - Hard Currency – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 13.11%. Over the same period, the benchmark index, the JPMorgan ESG EMBI Global Diversified Index (Total Return, USD) (the Index), returned 10.26%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The year began in a positive note for emerging markets (EM) based on the expectation that a soft-landing and consequent policy easing in the US would benefit the asset class through lower borrowing costs. Risk sentiment soured when the collapse of Silicon Valley Bank in March led to some of the biggest bond market moves in decades.
- Then from the summer, the prospect of higher for longer interest rates led to a major bond selloff, briefly pushing the 10-year Treasury yield above 5% for the first time since the Global Financial Crisis. The market returned to price a soft-landing scenario from October and the theme received further momentum in December, particularly after the Federal Reserve signaled 75 basis points (bps) of rate cuts for 2024.
- Geopolitical events also remained in focus, particularly after Hamas's attack on Israel in October, while there was no resolution to the war in Ukraine.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Country allocation, driven by overweight allocations to higher yielding markets, particularly El Salvador, Argentina, and Sri Lanka, which meet the environmental or social goals of the Portfolio.
 - Security selection via euro-denominated bonds in Romania and Serbia.
- Detractors from relative returns:
 - An overweight allocation to Ecuador, where political challenges compounded financial pressures.
 - Underweight allocation to Turkey, where the government took a major pivot to orthodox policies.
 - Security selection in Ghana via the partial World Bank Guarantee 2030.

Overview of investment activities during the reporting period

- The Portfolio amended its sovereign sustainability framework, incorporating biodiversity and income inequality measures and additional health indicators. The Portfolio aims to maintain 100% of its bond exposure in sustainable investments.
- Portfolio maintained a high yield bias over investment grade credits. We added to our overweight allocations in Argentina in expectation of positive policy adjustments post-elections and in Armenia, Colombia, El Salvador, and Serbia, where we see resilience to tighter global funding conditions.
- We added to our overweight in Poland and sold out of Ecuador, Panama and UAE sovereign bonds due to revised sustainability assessments.

We anticipate the EM debt asset class to be supported by an environment of slower but not recessionary US growth, lower global yields and a widening growth pickup for emerging vs. developed countries in 2024. We see a limited risk for sovereign defaults this year, while increased International Monetary Fund (IMF) engagement by different EM countries should support funding needs and reform agendas. Technicals have improved for the asset class, with low investor positioning following a period of record outflows, and limited net issuance. We see opportunities for spread compression in specific issuers and off-benchmark bonds notably in the issuers rated BB segment.

Tactical Macro – Investment Manager's Report

From its inception on 30 June 2023 to the reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 2.20%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market, and asset class conditions during the reporting period

- Global stocks and bonds delivered strong performance in 2023, defying most investors' expectations that the global tightening cycle would weigh on economic activity.
- Throughout the year, inflationary pressures eased, and central banks progressed from hawkish rhetoric to data-dependent and ended the year by setting the stage for interest rate cuts in 2024.
- As investors navigated the fluid economic and investment environment amid regional banking stress and geopolitical and political tensions, corporate earnings remained resilient on the back of a well-supported consumer and labour market.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Total Portfolio return excluding cash during the period were S&P 500 call options, short 10-year US Treasuries, and short Russell 2000.
- Detractors from absolute returns:
 - Short Japanese government bonds, short USD/JPY, and an S&P 500 risk reversal options structure.

Overview of investment activities during the reporting period

- In the third quarter of 2023, we began positioning the Portfolio to have an embedded stagflation view in its construction through its exposure across the yield curve and a short in US equities. We also implemented long positions in the euro and Japanese yen.
- In the fourth quarter of 2023, our focus shifted from quality equity trades to a more varied approach. There was a reversal of positions focused on small caps and short-duration equities due to changing Federal Reserve signals.
- As we approached the end of 2023, the Portfolio capitalised on a short-dated SPX call amidst a more confident market scenario for a soft landing. We also implemented Secured Overnight Financing Rate (SOFR) call spreads given our view that the market had become overly complacent in its pricing for the timing and magnitude of interest rate cuts.

Going forward, we believe the unique nature of this policy tightening cycle has supported risk assets as we move out of the tightening cycle, we still need to be aware of the wide range of outcomes that could unfold throughout 2024. We believe it is highly unusual to have a rapid decline in nominal GDP without some damage to margins and earnings. Yet, we have seen continuously higher consensus equity forecasts over the past few months. Additionally, there are times when the market is about momentum and flows and times when one has to be very cognisant of what is priced in, and while a liquidity-based rally from here (even an aggressive one) is quite possible if the market truly sees an easing cycle ahead, we have already priced in the largest divergence of probabilities of a soft landing outcome relative to a stagflation outcome since the end of 2021. Given the setup to start the year, we will look to initiate some short equity exposure in the US versus Japan, as well as long positions in the US five-year Treasuries that we will look to add to on backups in yields surrounding market concerns of supply issuance. Additionally, we have maintained our long JPY bias. We still believe this is quite a skittish market and there remains much more uncertainty around the growth outlook than the inflation outlook going forward. It will be interesting to see how this translates into risk assets through 2024.

Ultra Short Term Euro Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the EUR I Accumulating Class was 6.72%. Over the same period, the ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR) (the Index) returned 2.46%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown reflect the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Volatile inflation, resilient economic data, and central bank rhetoric proved to be the primary drivers of fixed income markets over 2023. Financial conditions tightened over most of the year, in part due to the bank failures in the first quarter whilst worker shortages kept labour markets tight and consumer spending above expectations. The fourth quarter saw a change in tone, with below-expectation inflation prints signaling to investors that central banks, including the European Central Bank (ECB), were near or at peak rates. In Europe, investment grade and high yield markets closed positively, returning 8.84% and 12.81%.
- Rate markets provided the main source of volatility for fixed income markets over 2023. Whilst 2023 presented many periods of volatility (notably March and October) the final quarter saw numerous downside inflation misses. This prompted a rally in rate markets where yields closed the year close to where they entered it, with major indices having the best two months in their history as a result including EUR Aggregate (6.14%), and Pan-European Aggregate (6.63%).
- Spreads, expected to widen meaningfully, were stable (in fact tightening) and default rates remained below/close to historical averages.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Exposure to Financials and Industrials (316 basis points (bps) and 260bps, respectively).
 - Exposure to Consumer Cyclical added meaningfully (70bps) as credit performed above expectation in 2023 and fundamentals remained intact.
- Detractors from relative returns:
 - Use of derivatives (-52bps), implemented to provide dynamic positioning over the year and manage risk, detracted.

Overview of investment activities during the reporting period

- Throughout 2023, we reversed several trading strategies that we had implemented in 2022, particularly those where we had increased credit risk in reaction to the significant spread widening during the third quarter of that year. We strategically reduced the overall Portfolio beta, primarily by scaling back our credit exposure in both investment grade and high yield. Concurrently, we capitalised on the inverted yield curve by allocating more funds into short duration, covered bonds.
- In high yield, we divested from what we perceived as overpriced securities rated BB, and also bolstered our investment in REITs to leverage the considerable spread widening observed in both 2022 and 2023.

Going into the new year, we are defensively positioned in credit given the uncertain economic outlook and lack of risk-reward in spreads. Whilst inflation has peaked, data will be paramount over the year to determine the pace at which the ECB are able to cut rates, alongside the health of the broader European economy. Overall, yields remain meaningfully above historic averages and, in our opinion, still provide scope for strong returns in this asset class over 2024. With election cycles across the US, UK and Europe alongside continued geopolitical tensions, volatility is likely to increase at various points over the year and in these periods, we will look to take advantage and position the portfolio proactively to generate superior total returns.

Uncorrelated Strategies – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was -8.86%. Over the same period, the benchmark index, the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD) (the Index) returned 5.12%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- 2023 was a strong year for risk assets, most notably US large-cap equities, despite interest rates now sitting more than 5% above recent troughs, the collapse of a number of banks in the US and Europe, as well as ongoing conflicts in Ukraine and the Middle East. Over the final quarter of the year, markets have priced moderating inflation, a path lower in rates and something close to a soft landing in the US, which was fueled by dovish statements from the Federal Reserve in the fourth quarter.
- Over the reporting period, the MSCI World Index (Net) returned 23.8% while the Bloomberg Global Aggregate Index (USD) returned 7.15%. Currencies were more rangebound over the year, with the US dollar (as proxied by the US Dollar Index) finishing down -2.1%.
- We view 2023 as an anomalous year for a few reasons. First, we saw some periods where fixed income volatility was the highest in over 20 years, but equity volatility remained calm. An example would be March (over half of the loss for the year) where we were on the wrong side of the extreme fixed income moves (having been on the right side the prior year) and were not rewarded with our pro-volatility positioning because equity markets remained calm and the S&P 500 rose 3.5% against the backdrop of three bank failures and the emergency rescue of one of the world's oldest investment banks.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Insurance-Linked Securities (1.17%)
- Detractors from relative returns:
 - Global Macro (-3.52%), Trend Following (-1.94%), Equity Market Neutral (-1.87%), Short Term Trading (-1.64%), Statistical Arbitrage (-0.70%), Volatility Relative Value (-0.58%)

Overview of investment activities during the reporting period

- Risk within the Statistical Arbitrage allocation was scaled back up in December.
- In addition, sub-adviser activity included a further allocation in Statistical Arbitrage, as they started to build out their book in December.
- In another sub-adviser account, we added their Advanced Trend strategy to the existing Gemini short-term futures trading strategy in order to add a second high quality trend-following account, as well as reap the additional benefits of potential netting of signals and a reduction in transaction costs.
- Lastly, a redemption was made within the Equity Market Neutral allocation in November and December.

We observe that the strategy has delivered some of its best returns historically in some of the most turbulent times for risk assets and 60/40 portfolios. Today, exposures are quite diversified and stress tests generally show positive tail outcomes. It seems dissonant to us that after 500 basis points of interest rate hikes in the world's largest economy, equity pricing remains serene and volatility levels reflect a relaxed confidence around the ability of central banks to guide us through a bout of "short term" inflation and towards a gentle landing with minimal economic pain. With equities finishing the year up more than 20% on the year and the Cboe Volatility Index (VIX) hitting new lows, it seems now more than ever appropriate to look for genuine diversifiers. Finally, we are excited about the pipeline of new ideas that we implemented in the Portfolio over the second half of the year and hope to see the benefits of this in months to come.

Uncorrelated Trading* – Investment Manager's Report

For the period beginning 1 January 2023 through the Portfolio's close on 24 May 2023, the total return for the USD X Accumulating Class was -2.40%. Over the same period, the ICE BofA US Dollar 1-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD) (the Index) returned 1.82%. (Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The first four months of the year were certainly a challenging period for the Portfolio, after which we saw a quieter period of flat returns while trying to keep an eye on downside protection in the face of a powerful risk rally.

What affected its performance during the reporting period

- The reporting period was a challenging trading environment for all six of our core allocations for a wide variety of reasons. The year began with a loss in January, followed by slight positive performance in February, before the whipsawing markets seen in March left the Portfolio down on the quarter. The second quarter was more muted from a performance perspective, with negative returns in April, before the portfolio was fully de-risked throughout May.
- For the first quarter, the Portfolio returned -1.90% with performance in January largely responsible for the negative returns over the quarter. By strategy, our allocation to Equity Market Neutral was a positive contributor, with Short Term Trading, Volatility Relative Value and Statistical Arbitrage negative. All asset classes were down over the quarter, led by fixed income and followed by currency and equity trading.
- For the second quarter, the Portfolio returned -0.51% with April and May both down. By strategy, our allocation to Short Term Trading was flat, with Equity Market Neutral, Volatility Relative Value and Statistical Arbitrage negative. By asset class, credit and interest rate trading was positive, with equities and currencies negative.

Overview of investment activities during the reporting period

- Allocations to sub-advisers were unchanged over the reporting period.

*Portfolio liquidated on 24 May 2023.

US Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 36.82%. Over the same period, the benchmark index, the S&P 500 Index (Total Return, Net of Tax, USD) (the Index) returned 25.67%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The economic climate during the year was shaped by a diverse array of factors, with Federal Reserve (Fed) officials raising rates during the first half of the year followed by a pause during the second half of the year.
- Despite the cautious economic outlook, markets continued to rally, despite a modest decrease in overall S&P 500 earnings due to margin compression from elevated costs.
- Meanwhile, mixed economic data continued to fuel market volatility, with the most severe fluctuations seen in short-dated treasury yield curves. The rapid pace of interest rate increases also led to asset-liability mismatches at several US regional banks, exacerbating macroeconomic stability concerns.
- Despite these challenges, optimism around advances in AI and encouraging corporate earnings reports, primarily driven by mega-cap technology companies, provided some respite.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection was most positive in Communication Services and IT.
 - The Portfolio's overweight to IT and underweight to Energy was most additive to returns from an allocation perspective.
- Detractors from relative returns:
 - Stock selection in the Consumer Discretionary and Utilities sectors detracted.
 - From an allocation perspective an overweight to cash detracted.

Overview of investment activities during the reporting period

- The Portfolio remained most overweight to IT and underweight to Energy as a result of company-specific factors while balancing overall Portfolio risk factors.
- The Portfolio's cash decreased during the period as a result of attractive valuations and better profitability in certain sub-segments of the market.

As we close 2023, we recognise that while the economy is decelerating, it has been more resilient than many expected. At the start of January, the consensus forecast embedded a 2-in-3 probability of a recession, yet as we exit the year, US GDP growth is estimated to be a very respectable 2.5%. Furthermore, despite calls for a larger cut to earnings, full year Index earnings estimates have held up and the focus is shifting to 2024. At the same time, progress has been made by the Fed in the fight against inflation and company earnings, on average, are coming in above expectations. Yet, commentary around decelerating consumer trends, continued declines in existing home sales and early signs of a softening job market, offer a clear indication that the Fed's tightening cycle is having a real impact to the broader economy. Despite this, the Fed has remained steadfast in its commitment to fighting inflation, which although it has continued to decelerate, remains persistent in certain core areas such as food, wages and housing, and stronger-than-expected economic data only support this idea. While Fed officials have now indicated rates are likely at peak, uncertainty remains on how long they will remain at these elevated levels, with investors anticipating cuts to begin as soon as March. Until we have more clarity on the path of the economy versus inflation and how that translates into actual rate cuts versus expectations, we anticipate continued market volatility. So, in the current environment, we believe the divergence in underlying companies' operating performance will be ever more apparent going forward. As always, we continue our efforts to best understand company and Portfolio-specific factors as we believe this environment is flush with a confluence of fiscal policy considerations, monetary policy stimulus, public health concerns, geopolitical uncertainty, commodity price volatility and inflation dynamics. As market dynamics change, this can cause company market values to dislocate from their long-term potential values, creating a volatile environment with potential opportunities.

US Equity Index PutWrite – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 15.39%. Over the same period, the blended benchmark comprised of 50% Cboe S&P One-Week PutWrite Index and 50% Cboe S&P 500 PutWrite Index (collectively, the Index) returned 11.69%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Despite multiple conflicts, the Silicon Valley Bank collapse, rampant price inflation, immigration, political controversies, labour union strikes, and budget brinksmanship, the S&P 500 Index closed 2023 out with an annual total return of 25.67%.
- With the positive equity market momentum and anticipation that the Federal Reserve (Fed) will begin a rate cutting cycle in 2024, implied volatility levels declined into year end. The Cboe S&P 500 Volatility Index (VIX) averaged 16.9 for the year, which is well below its 2022 average of 25.6, albeit only a few points off its long-term average. The S&P 500 Index option market kept its positive implied volatility premium streak going with an average premium of 4.3 in 2023.
- Many alternative strategies fared well relative to their more recent pasts which saw zero rates and volatile equity markets drain return potential. Overall, equity index putwriting performed well relative to popular investment strategies and our less directional index option strategy managed to navigate the S&P 500's performance reversal from August through December. We believe these trends may continue as US economic and political uncertainty begin to cool equity and credit market returns and market uncertainty rebounds from recent lows in the new year.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - On the year, the S&P 500 options sleeve garnered a notable 15.50% and exceeded the Cboe S&P 500 PutWrite Index return of 14.32%. Over the same period, the Cboe S&P 500 One-Week PutWrite materially fell behind with a return of 9.07%. Year-to-date, the collateral Portfolio has gained a substantial 4.39% versus the ICE BofA 0-3 Month US T-Bill Index return of 5.01%.
- Detractors from relative returns:
 - There were no detractors from relative returns during the reporting period.

Overview of investment activities during the reporting period

- The Portfolio's average option notional exposure over the period remained consistent with strategic target of 100% S&P 500 Index.

We don't believe the economic recession that was so certain to occur in 2023 is any more likely to occur in the first half of 2024. Our simple hypothesis is that the higher levels of portfolio income being paid to investors in the form of interest payments will continue to be a short-term income enhancement for the large US upper-middle class. The direct economic stimulus that was being provided directly to consumers and asset owners by the Fed has now shifted to the US Treasury's distribution of interest payments (cash flows) to debtholders which are mostly wealthy investors and institutions. The immediate increase in income for entities that spend is not instantly offset by the increase in longer-term financing costs that investors and corporations must bear over the coming years. Hence, we do not believe the Fed has to pull the 'handbrake' on the economy as the 'soft-landing' is in progress. However, looking ahead to the first few quarters 2024, we believe the outlook for equities could become much more ambiguous. Add in a contentious US Presidential election in November and 2024 has the possibility of a relatively volatile year.

US Large Cap Value – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was -2.63%. Over the same period the benchmark index, the Russell 1000 Value Index (Total Return, Net of Tax, USD) (the Index), returned 10.68%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The market overcame several headwinds during the year, including elevated inflation, Federal Reserve (Fed) rate hikes, concerns that the economy could fall into a recession, a mini crisis in the regional banking industry, and numerous geopolitical events. Despite this, the economy continued to expand and corporate results often exceeded expectations.
- Investor sentiment was buoyed late in the year as the Fed "pivoted" by indicating the likely end to rate hikes and the central bank pencilling in three rate cuts in 2023.
- For the year, the market was led by mega-cap technology stocks and companies with exposure to AI.
- All told, the S&P 500 Index returned 25.67% during the reporting period outperforming the Index, which returned 10.68%.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection in the Consumer Staples sector (led by Food Products)
 - Individual stocks included an overweight position in Oracle Corp., along with underweight positions in Walt Disney Company and CVS Health Corp.
 - From a sector positioning perspective, an underweight to Energy and an overweight to Materials.
- Detractors from relative returns:
 - Sector allocation, an underweight to Communication Services, an overweight to Utilities, and an underweight to IT were the largest detractors.
 - Stock selection within Industrials (driven by Machinery), Health Care (driven by Health Care Equipment & Supplies) and Materials (driven by Metals & Mining).
 - Individual stocks included not owning shares of Meta Platforms, Inc. Class A, along with overweight positions in Exelon Corp. and Pfizer, Inc.

Overview of investment activities during the reporting period

- While the Portfolio's sector positioning is driven by bottom-up stock selection, at the end of the reporting period its largest overweight allocations versus the Index were Utilities and Consumer Staples.
- In contrast, the Portfolio's largest sector underweights relative to the Index were Financials and IT.

We continue to evaluate the implications of a weaker economy and remain cautious on our outlook, notably the outlook implied by weakening demand. As such, we have been assessing what is the appropriate risk for our holdings within the portfolio and which stocks look most attractive given that backdrop. We continue to see a tougher period ahead of us in the near-term, as prices have not reflected that, in our opinion. We continue to be overweight the less economically sensitives areas of the market in individual stocks that we find to be attractively valued, including Consumer Staples, Health Care and Utilities. We continue to be an active large-cap value manager, remaining disciplined and trying to position the portfolio in the best opportunities we see in the current environment.

US Long Short Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 13.34%. Over the same period, the two benchmark indices, the S&P 500 Index (Total Return, Net of Tax, USD) and the HFRX Equity Hedge Index (Total Return, USD), returned 25.67% and 6.90%, respectively. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The economic climate during the year was shaped by a diverse array of factors, with Federal Reserve (Fed) officials raising rates during the first half of the year followed by a pause during the second half of the year.
- Despite the cautious economic outlook, markets continued to rally, despite a modest decrease in overall S&P 500 earnings due to margin compression from elevated costs.
- Meanwhile, mixed economic data continued to fuel market volatility, with the most severe fluctuations seen in short-dated treasury yield curves. The rapid pace of interest rate increases also led to asset-liability mismatches at several US regional banks, exacerbating macroeconomic stability concerns.
- Despite these challenges, optimism around advances in AI and encouraging corporate earnings reports, primarily driven by mega-cap technology companies, provided some respite.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Equity longs outperformed the broader market from a total return perspective.
 - Equity long selection was most positive in Financials, Communication Services and Industrials sectors.
- Detractors from relative returns:
 - Market short exposure, including broad-based market capitalisation, sector and style-specific hedges.
 - Equity long security selection detracted most in Consumer Discretionary and Materials.

Overview of investment activities during the reporting period

- Portfolio exposure increased incrementally to approximately 40-45% net long, while gross notional exposure increased to approximately 125-130%.
- Total Fundamental Short exposure decreased led by a decline in shorts in the Industrials, Financials, Materials and Communication Services sectors.
- Market Short exposure related to hedging activity increased.

As we close 2023, we recognise that while the economy is decelerating, it has been more resilient than many expected. At the start of January, the consensus forecast embedded a 2-in-3 probability of a recession, yet as we exit the year, US GDP growth is estimated to be a very respectable 2.5%. Furthermore, despite calls for a larger cut to earnings, full year S&P 500 Index earnings estimates have held up and the focus is shifting to 2024. At the same time, progress has been made by the Fed in the fight against inflation and company earnings, on average, are coming in above expectations. Yet, commentary around decelerating consumer trends, continued declines in existing home sales and early signs of a softening job market, offer a clear indication that the Fed's tightening cycle is having a real impact to the broader economy. Despite this, the Fed has remained steadfast in its commitment to fighting inflation, which although it has continued to decelerate, remains persistent in certain core areas such as food, wages and housing, and stronger-than-expected economic data only support this ideal. While Fed officials have now indicated rates are likely at peak, uncertainty remains on how long they will remain at these elevated levels, with investors anticipating cuts to begin as soon as March. Until we have more clarity on the path of the economy versus inflation and how that translates into actual rate cuts versus expectations, we anticipate continued market volatility. So, in the current environment, we believe the divergence in underlying companies' operating performance will be ever more apparent going forward. As always, we continue our efforts to best understand company and Portfolio-specific factors as we believe this environment is flush with a confluence of fiscal policy considerations, monetary policy stimulus, public health concerns, geopolitical uncertainty, commodity price volatility and inflation dynamics. As market dynamics change, this can cause company market values to dislocate from their long-term potential values, creating a volatile environment with potential opportunities.

US Multi Cap Opportunities – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD1 Accumulating Class was 18.10%. Over the same period, the S&P 500 Index (Total Return, Net of Tax, USD) (the Index) returned 25.67%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- In 2023, the US economy demonstrated resiliency in a rising interest rate environment, highlighted by positive GDP growth, a robust labour market, and strong underlying consumer demand. Investor sentiment for US equities was supported by moderating inflation and an improvement in the outlook for global growth.
- Equity market returns for the Index were predominantly driven by the outperformance of select Large-Cap Growth and technology-oriented companies.
- US equity market returns were led by the outperformance of select large-cap growth and technology-oriented stocks. This resulted in a significant concentration of market returns, as evidenced by the performance disparity between the Index and the S&P 500 Equal Weight Index of 1,242 basis points. This was the largest calendar year outperformance by the Index vs. the Equal Weight Index since 1998. This is creating opportunity entering 2024, as investment styles typically shift in-and-out of favour.
- The "Magnificent Seven"¹ companies were responsible for over 60% of the 2023 return of the Index.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Strong stock selection within Consumer Staples, Energy, Financials, Materials, and Utilities
 - Overweight positions to the Communication Services and Consumer Discretionary sectors
 - Underweight positions to Energy, Health Care, and Utilities, and zero exposure to Real Estate
 - Our unconstrained, multi-cap approach has resulted in the identification of a number of investments that are not held in the Index that have positively benefitted relative performance. In 2023, six of the eight top individual contributors to relative performance were companies not held in the Index.
- Detractors from relative returns:
 - Underweight to the IT sector, and stock selection within the Communication Services and Consumer Discretionary sectors. Relative performance headwinds were substantially due to the Portfolio's underexposure to the "Magnificent Seven" companies.

Overview of investment activities during the reporting period

- The Portfolio finished the period overweight Financials, Industrials, and Materials, and underweight Health Care and IT, and had no exposure to Real Estate.

We believe normalising inflation, combined with continued economic growth and reasonable consumer demand create an attractive environment for US equities as we enter 2024. As management teams adapt to the interest rate environment, we believe our free cash flow focused approach, understanding of capital structures, and valuation discipline, are beneficial. Select businesses are able to differentiate themselves from peers with company-specific solutions in response to inflationary pressures, evolving interest rates, and ongoing shifts in demand trends and consumer behaviour. The depth of our Storehouse of Knowledge remains robust. We continue to identify companies with high-quality business models and attractive free cash flow characteristics, trading at compelling valuations. We believe the Portfolio is well-positioned to benefit as investors increase their focus on company fundamentals.

¹ The "Magnificent Seven" is a nickname for seven mega-cap technology-related growth stocks that performed significantly better than the rest of the stocks in the S&P 500® Index, and is comprised of Alphabet (Class A & C), Amazon.com, Apple, Meta Platforms, Microsoft, NVIDIA and Tesla.

US Real Estate Securities – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 10.55%. Over the same period, the benchmark index, the FTSE Nareit All Equity REITs Index (Total Return, Net of Tax, USD) (the Index) returned 9.95%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The US stock market rallied sharply in November and December, as the rate environment for 2024 looked promising with the Federal Reserve (Fed) largely on hold for the first half of 2024 and investors anticipating rate cuts in second half of the year.
- Inflation cooled and consumer spending, while moderating, remained solid. While the pace of hiring has decelerated and job openings are down, labour markets have remained strong.
- All told, the S&P 500 Index returned 25.67% during the reporting period. Real estate investment trusts (REITs), as measured by the Index, returned 9.95% over the reporting period and underperformed the broad US equity market.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Underweight to Office and Diversified sectors
 - Security selection within the Office sector
 - Security selection within the Specialty REITs sector
- Detractors from relative returns:
 - Underweight to Data Centers and Lodging sectors
 - Security selection within the Data Centers sector
 - Security Selection within the Shopping Centers REIT sector

Overview of investment activities during the reporting period

- While the Portfolio's sector positioning is mainly driven by bottom-up stock selection, at the end of the reporting period its largest overweight allocations versus the benchmark were Self Storage and Infrastructure REITs. In contrast, the Portfolio's largest sector underweights relative to the benchmark were Data Centers and Office.

After a challenging 2023 that was largely dictated by the Fed's tightening campaign, the rate environment set up for 2024 looks promising to us with the Fed largely on hold for the first half of 2024 and investors anticipating rate cuts in the second half of the year. However, this is against a backdrop of greater economic uncertainty driven by the weakening consumer, who is seeing reduced savings and slower job growth, low business confidence, pockets of elevated supply in certain sectors and increased capital costs and expenses weighing on margins. Overall pressures on growth will result in greater attention to valuations, earnings quality and strength in business fundamentals which we believe will benefit well capitalised REITs in select sectors that have demand drivers that are less cyclical or not overly dependent on the consumer. Given two years of relative underperformance of REITs versus the broader market (~20%), relatively low leverage profile (~33% Total Debt/Gross Asset Value) and stronger dividend profile (~4% REIT dividend yield vs. 1.5% S&P 500 Yield), REITs offer more relative value, should growth broadly disappoint, or capital costs continue to increase. We believe many REITs are trading at a discount to NAVs and to private peers (~200bps in cap rate differential). In a 'normal' inflationary environment and slowing growth environment, REITs provide slow but dependable growth while providing inflation protection.

US Small Cap – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 15.36%. Over the same period, the benchmark index, the Russell 2000 Index (Total Return, Net of Tax, USD) (the Index) returned 16.41%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The market overcame several headwinds during the year, including elevated inflation, Federal Reserve (Fed) rate hikes and concerns that the economy could fall into a recession. Investor sentiment was positive late in the year, largely driven by the Fed's "pivot," as it indicated the likely end to rate hikes and potential for rate cuts in 2024.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection was positive in the Health Care, Materials, and Technology sectors.
 - An overweight to Software industry within the IT sector added the most value. Our overweight in the Industrials sector and lack of Utility names also added considerable value.
 - Individual stocks that contributed the most to absolute performance included Fair Isaac Corp., Manhattan Associates, Inc. and Qualys, Inc.
- Detractors from relative returns:
 - Holdings in the Industrials and Financials sectors detracted from results.
 - The Portfolio's underweight to Regional Banks within the Financials sector and the lack of Household Durables names were the largest drags on relative performance.
 - Individual stocks that detracted the most from absolute performance included Valmont Industries, Inc., Driven Brands Holdings, Inc. and CVB Financial Corp.

Overview of investment activities during the reporting period

- While the Portfolio's sector positioning is driven by bottom-up stock selection, at the end of the reporting period its largest overweight allocations versus the Index were IT and Industrials. In contrast, the Portfolio's largest sector underweights were Financials and Real Estate.

Over the past two years, the Fed has been squarely focused on restoring price stability with the goal of suppressing demand to bring inflation under control. Recent Fed commentary suggests the tightening cycle has peaked, while also indicating that rates will remain elevated. Overall economic activity remains relatively stable, with some indicators suggesting an economic cooling. Considering this backdrop, equity markets have remained highly sensitive to Fed commentary, inflation-related data points and economic indicators. Taking a step back, markets have potentially entered a new phase. Specifically, the cost of capital has risen materially, financing has become more difficult, and risk aversion has returned. That said, recent optimism around the potential for rate cuts has caused an easing in financial conditions and driven more risk taking. The risk of recession both in the US and globally remains a possibility, but by no means is a certainty. With the macro trajectory clouded, we are striving to maintain balance in the portfolio. We remain confident that our high-quality portfolio of businesses with attractive financial characteristics, differentiated and durable business models, and sustainable earnings growth is well positioned to weather these uncertain times and deliver above-average risk-adjusted returns.

US Small Cap Intrinsic Value – Investment Manager's Report

For the 12-month reporting period ended 31 December 2023, the total return for the USD I Accumulating Class was 14.17%. Over the same period, the benchmark index, the Russell 2000 Value Index (Total Return, Net of Tax, USD) (the Index) returned 13.87%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and does not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Who would have thought sentiment could change so quickly? In the span of two weeks, the 'higher for longer' interest rate mantra which had been suffocating investor enthusiasm for most stocks, other than the "Magnificent Seven"¹ evaporated instantaneously. Just when higher interest rates were about to take another bite on levered companies and corporate profits, the Federal Reserve (Fed) appropriately remembered the other half of its dual mandate – maximum employment.
- Our take on the economy and inflation has been consistent. Inflation would come down, not to 2% but lower than what we saw in 2022 and early 2023, and widespread job losses were unlikely. The wild card was the Fed's commitment to the 2% target. Too hawkish, a recession could ensue and too soft would undermine long-term Treasury debt markets. Whether they've struck the right balance is still unclear, but the 'big reveal' that the Fed is starting to feel comfortable with the outlook for inflation was extremely well received.
- Two ideas worth considering are that inflation will be structurally higher in the future decade than the one past and barring a major shock, demographic trends reduce the risk of significant runups in unemployment. Skilled labor, particularly in manufacturing, is aging out far faster than new workers are entering the workforce. Companies tell us the skilled labor shortage is real, and the time and cost to bring new hires up to speed is significant. These trends tie back to a major pillar of our strategy which is the need for technology to address the productivity and labor challenges that lie ahead. We continue to see secular tailwinds for companies in the game of selling productivity.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - The overweight in technology and performance of individual stocks generally exceeded our expectations helping both absolute and relative returns. Four of our five best performers were IT companies.
- Detractors from relative returns:
 - We didn't play the regional banking crisis well, failing to increase positions in bank stocks at the bottom and then lightening up before the fourth quarter rally which hurt on both an absolute and relative basis.
 - Redeployment of the regional bank proceeds into utilities mitigated some of the negative impact but not enough.
 - Our recent active engagements and capital injection strategies have yet to pay off but we're still at it. There are different agenda items with each company but all with an eye towards addressing investor concerns and suggesting solutions to create shareholder value.

Overview of investment activities during the reporting period

- We accelerated the introduction of new ideas into the Portfolio and actively rebalanced the existing holdings. In total we added twelve new ideas and eliminated seven. We rebalanced another 13% of the Portfolio (eight percent added to existing names and five percent in trims).
- Overall, 2023 was a year of limited mergers and acquisitions, nevertheless three companies were acquired and a fourth, is subject to an offer. At year-end the Portfolio's discount to intrinsic value was 29.3%, basically in line with the 26-year average.

So, what does 2024 have in store? It's hard to say with any conviction and frankly most everybody got it wrong last year. But one lesson investors and clients should all take from 2023 is that very few people or firms are capable of effective market timing. Our recommendation is invest according to your risk tolerance, make your allocations, and stay the course. In our opinion, the risks in 2024 are all in plain view; dysfunctional domestic politics, federal fiscal imbalances, wars in Eastern Europe and the Middle East with little resolution in sight and, to top it all off, a Presidential election where the two leading candidates are flawed. However, when the challenges that lay ahead seem daunting, we stop and look back at the past. We started the strategy over 25 years ago with \$7 million in client funds and a \$50,000 personal investment. At the end of 2023, client assets under management were \$4.1 billion and the \$50,000 seed account is approximately \$750,000.

¹ The "Magnificent Seven" is a nickname for seven mega-cap technology-related growth stocks that performed significantly better than the rest of the stocks in the S&P 500® Index, and is comprised of Alphabet (Class A & C), Amazon.com, Apple, Meta Platforms, Microsoft, NVIDIA and Tesla.

* The Aggregate Financial Statements have been adjusted to account for cross investments between Portfolios. Details for any cross investments between Portfolios are included in Note 10 of the Notes to the Audited Financial Statements.

Statements of Significant Purchases and Sales (Unaudited)

In accordance with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended, a statement of changes in the composition of the Schedule of Investments during the reporting period is provided to ensure that Shareholders can identify changes in the investments held by the Portfolio. The following statements present the aggregate purchases and sales of transferable securities exceeding one percent of the total value of purchases or sales, respectively, for the period. At a minimum, the largest twenty purchases and twenty sales are presented, if available.

5G Connectivity – Statement of Significant Purchases and Sales

Aggregate purchases greater than one percent of the total value of purchases:
