## KEY RISKS

### WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of your investment may fall as well as rise and you may get back less than you originally invested.

The Sub-Fund may have a higher volatility to its NAV due to its investment policy when compared to sub-funds investing in global markets, with broader investment policies and/or are a less volatile asset class.

Refer to “Risk Descriptions” and “Sub-Fund Descriptions – Multi-Manager Alternatives Fund” of the Prospectus for further information on risks and other associated risks of the product.

## Market and Credit Risks

### YOU ARE EXPOSED TO MARKET AND CREDIT RISKS

**China risks** – Investing in the domestic market of the People’s Republic of China (PRC) is subject to the risks of investing in emerging markets and additionally risks that are specific to the PRC market such as risks in investing through Stock Connect.

**Concentration** – When a Sub-Fund invests in a limited number of securities, issuers, industries, sectors or within a limited geographical area, it is likely to be more volatile and risky as its performance will be more strongly affected by political, economic, environmental or market conditions within that area or economic sector.

**Multi-manager sub-fund** – The Sub-Fund’s performance depends on the skill and ability of the Investment Manager in selecting, overseeing and allocating Sub-Fund assets to certain sub-investment managers. The loss of key investment personnel by any one sub-investment manager could have a detrimental effect on the performance of the Sub-Fund.

**Catastrophe bonds** may lose part or all of their value if a trigger event occurs (such as a natural disaster or financial or economic failure).

**Convertible securities** have characteristics of both debt and equity securities and carry credit, default, equity, interest rate, liquidity and market risks. Convertible securities are usually subordinated to comparable nonconvertible securities and generally do not participate directly in dividend changes of the underlying securities.

**Contingent convertible bonds** are likely to be adversely impacted should specific trigger events occur. This may result in the bond converting to equity at a discount, the value being written down and/or coupon payments ceasing or being deferred.

**Debt securities** (bonds) including those issued or guaranteed by governments and their agencies carry credit risk and interest rate risk. The Sub-Fund is also exposed to risks associated with investing in Below Investment grade debt, Investment grade debt, Government debt, Unrated debt and Distressed debt.

**Emerging markets** may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency, greater financial risks, higher volatility and lower liquidity than developed markets.

**Equities** – The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions sometimes rapidly or unpredictably.

**MBS and ABS** depend on the cash flows from a specified pool of financial assets and are subject to greater credit, liquidity, pre-payment and interest rate risk and may be more volatile and less liquid than other bonds.

**REITs** are subject to the risks associated with the ownership of real estate which may expose the Sub-Fund to increased liquidity risk, price volatility and losses due to changes in economic conditions and interest rates.

**SPACs** – There is higher volatility in price post-acquisition of a target as the SPAC trades as a listed equity and is subject to Equities risk. The potential target of the SPAC acquisition may not be appropriate for the Sub-Fund or may be voted down by the SPAC shareholders which foregoes the investment opportunity presented post-acquisition.

**UCITs, UCIs and ETFs** – Investment decisions in respect of the underlying funds are made independently of the Sub-Fund, therefore there can be no assurance that effective diversification of the Sub-Fund’s exposure will always be achieved. The price and movement of an ETF and/or closed-end fund designed to track an index may not track the underlying index and may result in a loss.

**Credit** – A bond will generally lose value if the issuer’s financial health deteriorates, or appears likely to. An issuer could go into default (become unwilling or unable to make payments on their bonds), which often will make the bond illiquid or worthless.

**YOU ARE EXPOSED TO CURRENCY RISKS**

**Currency** – Movements in currency exchange rates can adversely affect the return of your investment. Investing in a share class not denominated in SGD will expose you to additional currency risks.

**Hedging** – Any measures taken to offset specific risks could work imperfectly. Hedging may be used to mitigate currency, duration, market or credit risk. Hedging involves costs, which reduce investment performance.

**Liquidity Risks**

The Sub-Fund is not listed and you can redeem only on a Singapore Dealing Day.

If the total requests for redemptions and switches out of the Sub-Fund on any Valuation Day exceeds 10% of the total value of Shares in issue of the Sub-Fund, the Management Company reserves the right to defer any requests in excess of 10% until the next Valuation Day. On the next Valuation Day(s), deferred requests will be dealt with in priority to later requests.

**Product Specific Risks**

**YOU ARE EXPOSED TO DERIVATIVES RISKS**

The Sub-Fund may use derivatives to achieve its investment objective. The Sub-Fund may, within its prescribed limits, invest in derivatives for hedging and Efficient Portfolio Management purposes.

The value of derivatives can be volatile because a small movement in the value of the underlying asset can cause a large movement in the value of the derivative, resulting in losses in excess of the amount invested by the Sub-Fund.

**Short positions** – The possible losses from taking a short position on a security may be unlimited as there is no restriction on the price to which a security may rise. Short positions may increase the volatility of the Sub-Fund and this technique could be prejudiced by regulatory change.
