of such securities.			strategy.
<ul style="list-style-type: none"> • The Fund aims to achieve its investment objective by taking exposure to a wide range of asset classes, such as Equity Securities and equity-related securities, Fixed Income Instruments and currencies as well as commodity-related instruments and property related instruments (though not direct commodity and property investments), using the Investment Advisor's asset allocation expertise. The Investment Advisor uses a three-factor approach to evaluating asset classes and their risks in seeking to achieve the Fund's investment objective which consists of 1) fundamental analysis relating to global economics and projected growth of various industrial sectors, 2) valuation analysis, and 3) assessment of market demand of and supply for asset classes. PIMCO evaluates these factors on an ongoing basis and uses a combination of direct investment and derivative exposure to implement a resulting mix of asset classes within the Fund that reflects the Fund's investment objective. • The Fund will typically invest up to 60% of its net assets in Equity Securities or equity-related securities and which may include investments in other collective investment schemes that primarily invest in equity or equity-related securities. • The Fund may invest fully in Fixed Income Instruments. There are no restrictions on minimum credit rating and the Fund may invest in below investment grade securities without limit. • The Fund may invest up to 25% of net assets in securities traded on domestic Russian markets and any such investment will only be made in securities that are listed/traded on the Moscow Exchange. • The Fund may use derivative instruments such as futures, options and swap agreements and may also enter into currency forward contracts. Derivative instruments may be used for (i) hedging purposes and/or (ii) investment purposes and/or (iii) efficient portfolio management. • The Fund is considered to be actively managed in reference to the Benchmark, which the Fund uses for performance comparison purposes. However, the Benchmark is not used to define the portfolio composition of the Fund or as a performance target. • The Fund promotes environmental and social characteristics but does not have sustainable investment as its objective. For further information, please refer to the Annex appended to the Supplement.

Market and Credit Risks					
<ul style="list-style-type: none"> • The Fund is subject to credit risk as it could lose money if the issuer or guarantor of a Fixed Income Security in which it invests, or counterparty to a derivatives contract, is unable or unwilling to meet its financial obligations. • The Fund is subject to currency risk as changes in exchange rates between currencies or the conversion from one currency to another may cause the value of the Fund's investments to diminish or increase. • The Fund is subject to equity risk as the value of equity securities, which are more volatile than Fixed Income Securities, may decline due to general market conditions. • The Fund is subject to interest rate risk as the value of Fixed Income Securities held by the Fund is likely to decrease if nominal interest rates rise. 					
Liquidity Risks					
<ul style="list-style-type: none"> • The Fund is exposed to liquidity risk where it invests in derivative instruments which are difficult to purchase or sell. If a derivative transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price. The Fund is not listed in Singapore and you can redeem only on Dealing Days. There is no secondary market in Singapore for the Fund. 					
Product-Specific Risks					
<ul style="list-style-type: none"> • The Fund's use of derivative instruments is subject to the derivatives risks described in the Irish Prospectus, such as commodity risk, liquidity risk, interest rate risk, market risk, credit risk and management risk. Derivatives will typically be used as a substitute for taking a position in the underlying asset. • The Fund is subject to global investment risk as securities of certain international jurisdictions may experience more rapid and extreme changes in value. • The Fund may be subject to high yield risk such as greater levels of interest rate, credit and liquidity risks than Funds that do not invest in such securities. • The Fund is subject to emerging markets risk as it invests in emerging market securities of issuers based in countries with developing economies, which may present market, credit, currency, liquidity, legal, political and other risks different from, and potentially greater than, the risks of investing in developed foreign countries. • Dividends may be payable out of the capital of the Fund or of certain share classes, as a result capital will be eroded. • The Fund may be subject to risks from directly investing in Fixed Income Instruments traded on CIBM. The Fund may be exposed to liquidity risks, settlement risks, default of counterparties and market volatility associated with CIBM. • The Fund's investment in commodity index-linked derivative investments may subject the Fund to greater volatility than investments in traditional securities.
