money market instruments may be denominated in Hard Currency or the currencies of such Emerging Market Countries. With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on Recognised Markets globally, without any particular focus on any one industrial sector or region. • The Portfolio will achieve a carbon emission intensity level that is at least 20% lower than the broader Emerging Markets corporate debt investment universe, represented by the Index (excluding Excluded Securities). However, the Portfolio will actually target a carbon emission intensity level that is at least 30% lower (excluding Excluded Securities) than the Index. As part of the investment process, the Manager and the Sub-Investment Manager consider a variety of environmental and social characteristics using the NB ESG Quotient. The Manager and the Sub-Investment Manager use the NB ESG Quotient to prioritise investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. • Under normal market conditions, the Manager and Sub-Investment Manager will invest at least two thirds of the Portfolio's NAV in money market instruments and debt securities issued by corporate issuers in Emerging Market Countries and/or countries which are part of the Benchmark and denominated in Hard Currency. • The Manager and Sub-Investment Manager implement a systematic and disciplined framework for analysing sovereign and corporate local currency and Hard Currency debt securities. • The maximum proportion of the Portfolio's NAV that can be subject to total return swaps is 15%. KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? **The value of the product and its dividends or coupons (if any) may rise or fall.** **These risk factors may cause you to lose some or all of your investment:**	Refer to "RISK FACTORS" of the Singapore Prospectus for further information on the risk of the product.
Market and Credit Risks	
• **Fixed Income Securities and Downgrade Risk –** Fixed income securities are subject to credit risk and price volatility. Fixed income securities are also exposed to the risk of being downgraded, which can cause a significant drop in the value of the Portfolio. The Manager	

or Sub-Investment Manager may or may not be able to dispose of the debt instruments that are being downgraded. • **Lower Rated Securities Risk –** The Portfolio may invest in lower rated or unrated (i.e. non-investment grade or high yield) securities, which are more likely to react to developments affecting market and credit risk than are more highly rated securities. The Portfolio may therefore find it more difficult to sell such high yield securities or may be able to sell these securities only at prices lower than if such securities were widely traded. The Portfolio may experience difficulty in valuing certain securities at certain times. • **Credit Risk –** The Portfolio may invest in corporate fixed income securities. Corporate issuers of such fixed income securities may fail to meet their interest repayments, or repay debt, which may result in the Portfolio suffering temporary or permanent losses. • **Sovereign Debt Risk –** The Portfolio may invest in government/sovereign fixed income securities. The Portfolio will be exposed to direct or indirect consequences of political, social and economic changes in various countries by investing in sovereign debts. • **Emerging Market Economies Risk and Emerging Market Debt Securities Risk –** Investing in emerging markets may involve heightened risks (some of which could be significant) such as greater social, economic and political uncertainty, and periods of extreme volatility. Debt securities of Emerging Market Countries may be subject to greater risk of loss of principal and interest and liquidity risk, and be exposed to fluctuations in yields or prices, than debt securities issued by obligors in developed. • **Risks Associated with Investment in the China Interbank Bond Market through Bond Connect –** investing through Bond Connect in eligible bonds traded on the China Interbank Bond Market may expose to other risks including but not limited to suspension risk, operational risk, differences in trading day, regulatory risk and taxation risk, which may adversely affect the portfolio's ability to access PRC bond market to achieve his investment objectives. • **Currency Risk –** The base currency value of the investment of the Portfolio designated in another currency may rise and fall due to exchange rate fluctuations in respect of the relevant currencies. The currency exchange rates of Emerging Market Countries tend to be more volatile than those of more developed countries. As the base currency of the Portfolio is not in Singapore dollars, Singapore investors may be exposed to an additional currency risk. • **Currency Hedging Risk –** Currency hedging instruments may involve the risk of a default by a counterparty. • **Sustainable Investment Style Risk –** The application of ESG criteria could affect the Portfolio's exposure and could impact the Portfolio's investment performance. Information used to evaluate the application of ESG factors may not be readily available, complete or accurate, which could negatively impact the Portfolio's performance or create additional risk.	
Liquidity Risks	
• **The Portfolio is not listed in Singapore and you can redeem only on Dealing Days –** There is no secondary market for the Portfolio. Your right to redeem may be suspended or deferred under certain circumstances.	
Product-Specific Risks	
• **Risks relating to the use of FDI –** FDIs may be subject to various types of risks, including market risk, liquidity risk, counterparty credit risk, legal risk and operations risk. In addition, FDIs can involve significant economic leverage and may, in some cases, involve high risk of significant loss. The use of FDIs may lead to risk of loss of capital or increase the volatility of the Portfolio's NAV. • **Risks relating to dividend payment –** Dividends paid out of capital amount to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment which may result in an immediate decrease in the NAV of the relevant shares. An investment in high yield securities does not necessarily imply high dividend distribution for all share classes.
