

HSBC Portfolios

World Selection 3

Monthly report 31 March 2024 | Share class AMHSGD

Investment objective

The Fund aims to provide long-term capital growth and income by investing in a portfolio of bonds and shares. The Fund seeks to apply a medium risk investment strategy.

Investment strategy

The Fund is actively managed and is not constrained by a benchmark. In normal market conditions, at least 90% of the Fund's exposure is to bonds, shares and alternative investment strategies. The Fund gains exposure to bonds that are investment grade, non-investment grade and unrated issued by the government, government-related entities, supranational entities and companies based in developed markets and emerging markets. The bonds can be denominated either in US dollar (USD), other developed markets currencies hedged into USD, or in emerging markets currencies. The Fund gains exposure to shares issued by companies of any size. The Fund may invest up to 100% in other funds although this investment will normally be between 40% and 90%. The Fund can have an exposure to bonds (or other similar securities) of up to 80% of its assets. The exposure to shares (or securities similar to shares) can be up to 85% of assets. The Fund may invest up to 20% in non-investment grade and unrated bonds, and invest up to 30% in alternative investment strategies. The Fund's primary currency exposure is to USD. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless. The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

Monthly performance commentary

Market Review

Global equities delivered another month of strong returns in March; supported by encouraging economic data, sustained enthusiasm for Artificial Intelligence, and the prospect of interest rate cuts. Fixed income markets also experienced a positive month, with government bonds, corporate bonds and high yield bonds all rising in value. Within equities, developed markets outperformed emerging markets. The UK was the standout performer over the month, driven by positive GDP growth in January and the latest business sector survey in expansionary territory. European stocks also delivered strong returns, as inflation continued to fall and business confidence data remained firm. Japanese equities gained over the month as the Bank of Japan ended their negative interest rate policy after eight years. China's subdued performance acted as a drag on emerging markets returns, despite better than expected economic data, which investors took as a sign that any significant government stimulus may be delayed. In the bond markets, US Treasuries rose modestly, supported by dovish comments from Chairman Powell. In the UK, Gilts also experienced a modest rally following a softer than expected inflation print. Conversely, Japanese bond markets slipped marginally lower in March as the Bank of Japan removed their negative interest rate and yield curve control policies. The US dollar rallied over the month, driven by upward revisions in the US growth rate and some increase in support for interest rate cuts from other central banks. The Euro fell against the dollar given the relative strength of the US economic data and the persistent weakness in manufacturing data in the Eurozone. Sterling was flat against the dollar over the month. In the commodity markets, Gold rallied to all-time highs, driven by the prospect for rate cuts while Oil pushed higher, on elevated geopolitical tensions.

Portfolio performance

All major asset classes experienced positive returns during March, which resulted in positive absolute returns across all of the World Selection portfolios, with higher risk profiles outperforming lower risk profiles. The World Selection portfolios are actively positioned against a long-term asset allocation. During March, our active positioning added value. The biggest positive contribution came from our allocation to alternative asset classes, including Trend Following Hedge Funds and Gold. In addition, our tilt towards Spanish equity and the banking sector in Europe also added value. Conversely, our tilt away from Global High Yield and our preference for Brazil and India equity lost some value, while our tilt towards US Quality sector also detracted slightly.

Investment Team Views and Portfolio Positioning

There are three key themes in markets that we are positioned to capture within the World Selection portfolios:

Recession concerns easing - We are increasingly confident that Western economies can avoid a recession and are now neutrally positioned in equity. The US economy looks particularly strong, providing further support for equity markets. We are conscious that some downside risks still remain; as such, we maintain a preference for higher quality companies that are likely to remain resilient in case of persistent inflation or risks to the growth outlook. We are tilted away from High Yield bonds and Property, as we believe the full impact of higher borrowing costs has yet to be priced in for these asset classes. In March, we introduced a tilt towards the Energy sector versus the Utilities sector within the US. Energy companies will benefit if geopolitical tensions rise, while earnings will be supported by OPEC+ oil supply cuts and an increase in Shale output. We maintain our preference for Technology companies within the US, on the expectation that increased demand for Artificial Intelligence will support revenues for these companies. We prefer Spanish equity markets within Europe, as the market looks cheap, while the economy is strong. Spain's large pool of renewable energy also insulates its industry from elevated oil and gas prices. We are tilted towards the banking sector in Europe as it looks cheap, has strong profitability - benefiting from higher interest rates - and credit loss provisions are likely to be revised down on improving economic outlook.

The rate cuts are coming - We expect major central banks to start cutting interest rates in the second half of 2024 as inflation continues to ease. This encourages us back into government bonds, which are (for the first time in almost a decade) delivering an appealing stream of income for investors. We are focusing our bond exposure on the regions where we believe rate cuts are most likely, for example the US and in March we introduced an exposure to German bonds. Conversely, we have reduced our holdings in Japanese bonds where we expect monetary policy to remain tight. We are holding Gold, which has historically benefited as interest rates fall, and is a useful hedge against geopolitical risk. We are holding increased exposure to the Norwegian Krona and Polish Zloty as inflation remains elevated in these markets, and we expect to continue receiving high interest payments on these currencies as their respective central banks delay cutting interest rates.

Outperformance in Eastern and Emerging Markets - The economic backdrop in markets such as India, Japan and Brazil is very strong, monetary policy settings are accommodative and there is room for fiscal support. We maintain several positions to gain access to the specific opportunities we see in these markets:

Japan versus developed market equity, given appealing valuations, strong flows from foreign investors, improved corporate governance, and weakening Yen supporting exports; Indian equity and government bonds: India remains one of the fastest growing economies globally, is making steady productivity improvements, has high foreign direct investments, and favourable demographics; Brazil versus emerging market equity given the country's positive momentum, strong macroeconomic backdrop, and attractive fundamentals. We trimmed this position in February; Mexican peso currency positioning, given the currency is benefitting from the strong growth story in Mexico and is attractively valued against developed markets currencies; Japanese Yen against Swiss Franc, given Japan's stronger inflationary pressure and potential for interest rate policy shift

In March, we entered a position in Chinese government bonds. We expect the central bank to continue the interest cutting cycle to boost growth, which should benefit bond prices.

Risk Disclosure

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Investment involves risk. Past performance figures shown are not indicative of future performance. Investors should read the prospectus (including the risk warnings) and the product highlights sheets, before investing. Daily price change percentage is based on bid-bid price.

AMHSGD	SGD	Monthly	27 March 2024	0.015322	1.79%

The above table cites the last dividend paid within the last 12 months only.
Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may comprise of distributed income, capital, or both.
The calculation method of annualised yield prior to August 2019 is the simple yield calculation: (dividend amount / NAV per share or units as of ex-dividend date) x n; The calculation method of annualised yield from August 2019 is the compound yield calculation: ((1 + (dividend amount / ex-dividend NAV))^n)-1, n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12. The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.
Investors and potential investors should refer to the details on dividend distributions of the Fund, which are available on HSBC Asset Management (Singapore) Limited website.

Different classes may have different performances, dividend yields and expense ratios. For hedged classes, the effects of hedging will be reflected in the net asset values of such classes. Expenses arising from hedging transactions may be significant and will be borne by the relevant hedged classes. Hedged class performs the required hedging on a best efforts basis.
