5. Global exposure to financial derivatives

The global exposure to financial derivatives is computed using the commitment approach which is calculated as the sum of:

- a. the absolute value of the exposure of each individual financial derivative not involved in netting or hedging arrangement;
- b. the absolute value of the net exposure of each individual financial derivative after netting or hedging arrangements; and
- c. the sum of the values of cash collateral received pursuant to:
 - i. the reduction of exposure to counterparties of OTC financial derivatives; and
 - ii. EPM techniques relating to securities lending and repurchase transactions, and that are reinvested.

1. The expense ratio has been computed based on the guidelines laid down by the Investment Management Association of Singapore ("IMAS"). The calculation of the expense ratio at financial year end was based on total operating expenses divided by the average net asset value for the year. The total operating expenses do not include (where applicable) brokerage and other transactions costs, performance fee, interest expense, distribution paid out to unitholders, foreign exchange gains/losses, front or back end loads arising from the purchase or sale of other funds and tax deducted at source or arising out of income received. The Sub-Funds do not pay any performance fee. The average net asset value is based on the daily balances.
