Investment Strategy	
<ul style="list-style-type: none"> • The Portfolio will seek to achieve its objective primarily by investing in a portfolio, consisting mainly of equity and equity-linked securities, listed or traded on Recognised Markets in the US and related securities and American Depositary Receipts (ADRs) that are selected using a fundamental, bottom-up research approach. The Portfolio may hold stocks of companies of any market capitalisation and in any economic sector. • The Portfolio may also, but to a lesser extent invest in equity related derivatives which are listed or traded on markets in the US. • The Sub-Investment Manager performs both quantitative and qualitative analysis in an effort to identify companies that it believes have the potential to increase in value. This potential may be realised in many ways, some of which include: free cash flow generation, product or process enhancements, margin increases, and improved capital structure management. Investments are selected by the Sub-Investment Manager primarily based on fundamental analysis of issuers and their potential in light of their financial condition, industry position, market opportunities, senior management teams and any special situations as well as any relevant economic, political and regulatory factors. • Although the Portfolio invests primarily in assets in equity and equity-linked securities issued by companies that are listed or traded on Recognised Markets in the US, it may also invest on an ancillary basis in stocks of companies that are listed or traded on Recognised Markets outside of the US. • The Sub-Investment Manager's investment in equity options will not exceed 5% of the Portfolio's NAV on a delta-adjusted basis. • The Portfolio will not utilise total return swaps, securities lending or margin lending. • The Portfolio may use FDIs for investment purposes, efficient portfolio management purposes and hedging purposes, but not extensively or primarily for investment purposes. • The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques. 	<p>Refer to "INVESTMENT OBJECTIVE, FOCUS AND APPROACH" of the Singapore Prospectus for further information on the investment strategy.</p>

Market and Credit Risks																			
<ul style="list-style-type: none"> • Equity Securities Risk – Investment in equity securities in general are subject to market risks that may cause their prices to fluctuate over time due to various factors, such as changes in investment sentiment, political and economic conditions and issuer-specific factors. The value of convertible equity securities is also affected by prevailing interest rates, the credit quality of the issuer and any call provisions. These would cause the NAV of the Portfolio to fluctuate. • Country Concentration Risk – The Portfolio's investments are concentrated in the United States and will have greater exposure to market, political, legal, economic and social risks of the United States than a fund which diversifies country risk across a number of countries. As a result, the value of the Portfolio may be more volatile than a fund which diversifies across a larger number of countries or investments. • Currency Risk – The base currency value of the investment of the Portfolio designated in another currency may rise and fall due to exchange rate fluctuations in respect of the relevant currencies. Adverse movements in currency exchange rates can result in a decrease in return of and a loss of capital. In addition, as the base currency of the Portfolio is not in Singapore dollars, Singapore investors may be exposed to an additional currency risk. • Currency Hedging Risk – While potentially reducing the currency risks to which the Portfolio would otherwise be exposed, currency hedging instruments may involve the risk of a default by a counterparty (counterparty risk). 																			
Liquidity Risks																			
<ul style="list-style-type: none"> • The Portfolio is not listed in Singapore and you can redeem only on Dealing Days – There is no secondary market for the Portfolio. Your right to redeem may be suspended or deferred under certain circumstances. 																			
Product-Specific Risks																			
<ul style="list-style-type: none"> • Risks relating to the use of FDI – FDIs may be subject to various types of risks, including market risk, liquidity risk, counterparty credit risk, legal risk and operations risk. In addition, FDIs can involve significant economic leverage and may, in some cases, involve high risk of significant loss. The use of FDIs may lead to risk of loss of capital or increase the volatility of the Portfolio's NAV.
