The fund may also invest in money market instruments on an ancillary basis. The fund invests at least 50% of its assets in securities of issuers with favourable environmental, social and governance (ESG) characteristics. The fund's exposure to distressed securities is limited to 10% of its assets. The fund may use derivatives for hedging, efficient portfolio management and investment purposes. 	Refer to "Investment objective and other considerations" in the Prospectus for further information on the investment strategy.

KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? Investment involves risk. The value of the fund and its dividends (if any) may rise or fall. These risk factors, among others, may cause you to lose some or all of your investment (including your principal invested).	Refer to "Risk factors" in the Prospectus for further information on the risks of the fund.
Market and Credit Risks	
You are exposed to concentration risk. <ul style="list-style-type: none"> Focusing on any company, industry, sector, country, region, type of stock, type of economy, etc. makes the fund more sensitive to the factors that determine market value for the area of focus, which may result in higher volatility and a greater risk of loss. You are exposed to credit risk. <ul style="list-style-type: none"> A bond or money market instrument could fall in price, and become more volatile and less liquid, if the credit quality of the issuer or the security declines. In extreme cases, a debt investment could go into default. You are exposed to emerging markets risk. <ul style="list-style-type: none"> Emerging markets are less established, and more volatile, than developed markets. They involve higher risks, particularly market, credit, illiquid security, legal, custody, valuation and currency risks. You are exposed to market risk. <ul style="list-style-type: none"> Prices and yields of securities can change frequently with significant volatility based on a wide variety of factors, such as political and economic news, government policy and climate patterns. 	
Liquidity Risks	
The fund is not listed and you can redeem only on Dealing Days. <ul style="list-style-type: none"> There is no secondary market for the fund. All redemption requests should be made to the Singapore Representative or the Manager. You are exposed to liquidity risk. <ul style="list-style-type: none"> A security could be hard to value or to sell at a desired time and price, affecting the fund's value and its ability to pay redemption proceeds. 	
Product-Specific Risks	
You are exposed to convertible securities risk. <ul style="list-style-type: none"> Convertible securities carry both equity risk and the credit and default risks typical of bonds. You are exposed to counterparty and collateral risk. <ul style="list-style-type: none"> A counterparty could be unwilling or unable to meet its obligations to the fund. The value of collateral might not cover the full value of a transaction, or any fees or returns owed to the fund. 	

Product-Specific Risks

You are exposed to currency risk.

- Any changes in currency exchange rates could significantly reduce investment gains or income, or increase investment losses.

You are exposed to derivatives risk.

- The value of derivatives can be volatile. Small movements in an underlying asset's value can create large changes in the derivative's value and expose the fund to losses that could be greater than the cost of the derivative itself.

You are exposed to distressed securities risk.

- Distressed securities involve significant risk. They are highly volatile and may not yield an attractive return.

You are exposed to hedging risk.

- Hedging may not work as intended and involves costs, which reduce investment performance.

You are exposed to high yield risk.

- High yield securities are speculative. Compared to investment grade bonds, such securities are more volatile, more sensitive to economic events, less liquid and carry greater default risk.

You are exposed to interest rate risk.

- When interest rates rise, bond values generally fall. This risk is greater the longer a bond investment's duration.

You are exposed to investment fund risk.

- Investing in a fund involves certain risks an investor would not face if investing in markets directly, such as large outflows, valuation error and investment limitations.

You are exposed to operational risk.

- The fund could suffer losses due to errors, service disruptions or other failures, fraud, corruption, cyber crime, instability, terrorism or other irregular events.

You are exposed to sustainable investing risk.

- The fund may underperform the market or other funds that do not apply sustainability criteria.
