Risk allocations are calculated using an internal risk estimation process. A portion of the portfolio's excess cash is invested in insurance-linked bonds, managed by the internal adviser NB Alternatives Advisers LLC's insurance-linked securities team at no additional cost to investors. As of the end of March 2024, the notional allocation to insurance-linked bonds represented 8.65% of total portfolio assets under management.

[#] Hedged Class.

¹ As a percentage of the Portfolio's Net Asset Value.

² Benchmark: ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD). Investors should note that the Portfolio does not intend to track this index, which is included here for performance comparison purposes only. Performance returns of the benchmark are calculated in USD.

³ Performance returns are calculated in the currency of the relevant Share Class on (i) a NAV to NAV basis (ii) a NAV to NAV basis taking into account an assumed 5% initial sales charge and nil realisation fee indicated in the table above as "with initial sales charge", and both (i) and (ii) are calculated on the assumption that all dividends and distributions made by the relevant Share Class (if any) are reinvested, taking into account all charges which would have been payable upon such reinvestment. Share Classes which are designated in a currency other than USD are hedged into the Base Currency of the Portfolios (i.e. USD). Further details are set out in the Prospectus under the section "Share Class Hedging".

⁴ Up to 5%. The initial sales charge is a percentage of the purchase price and may be charged by either the Distributor or any sub-distributor.

**Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.
